

SUN VALLEY GREENWAY CONNECTOR

(Questions received for advertised RFP as of January 23, 2017. Please note that the MPO is not responsible for publishing additional questions that may be received in the future)

1. Will the UP be involved? **Most definitely**
2. Will the consultant need to contact the UP? **Yes**
3. Does surveying need to be done or can aerials suffice? **GIS aerial and contours can be used for most over the ground locations, however a Survey of critical points such as locations of footings for overpasses and walls for underpasses may need surveying. Physical inventory of the route will also be necessary to identify conflicts that might not be discernable on aerials or contours.**
4. I'm assuming only the recommended Greenway alignment corridor would need a survey, and not all the alternates. **Same as answer to number 3 above.**
