Fox Farm Intersection Decision Matrix

	Configuration						
Criteria	4-Way Stop	Signalized with added lanes (4" asphalt pavement on 6" base)1	Roundabout with NBRT (8" concrete pavement on 4" base) <sup>1</sup>				
Overall Level of	F	С	С				
Service, Peak	ı		C				
Eastbound Cue Length, max.	450 feet (PM peak)	225 feet (PM peak)	200 feet (PM peak)				
Overall Delay at Intersection	> 2 minutes (AM peak) 69 seconds (off peak) > 2 minutes (PM peak)	28 seconds (AM peak) 24 seconds (off peak) 28 seconds (PM peak)	20 seconds (AM peak) 8 seconds (off peak) 18 seconds (PM peak)				
Additional Right- of-Way	No change	3709 SF along SE leg (hotel is under construction) in a 50' wide pipeline easement with two gas lines in the easement.	509 SF at SE corner (owner dedicated 20' x 20' triangle on site plan), 1203 SF at NE corner, 1587 SF at NW corner (cityowned property), and 510 SF at SW corner (cityowned property).				
Additional Right- of-Way Cost	9 150 1533 390		\$ 18,864				
Utility Impacts	Relocate four porelocate one ov		Relocate two power poles, relocate one overhead light, adjust underground utilities at new surface, adjust guy wire.				
Pedestrian use	No marked crossings, missing sidewalks Marked crosswalks, stop bars, sidewalk, greenway.		Marked crosswalks, yield arrows, sidewalk, greenway, refuge islands.				
Construction Costs	\$0	\$ 791,687.50	\$ 888,731.00				
Operation and Maintenance Costs <sup>2</sup>	\$0	\$ 269,500 (total) \$ 10,780 (annually)	\$ 69,375 (total) \$ 2,775 (annually)				
Access to Fire Station	No change	West approach to be constructed, east approach to be closed.	West approach to be constructed, east approach to be closed.				
Use during emergency	No change	Pre-emptive clearing via signal controls.	Warning signage, other educational outreach, pre-emptive signal.				
Safety	See table below for Fatality Data from FHWA.	See table below for Fatality Data from FHWA.	Studies of intersections in the United States converted from traffic signals or stop signs to roundabouts have found reductions in injury crashes of 72-80 percent and reductions in all crashes of 35-47 percent. <sup>3</sup>				
Crash Cost Estimate <sup>4</sup>	\$ 2,105,726	\$ 7,150,995	\$ 2,100,436				
Expandability	No Change	Location of signal placement.	Additional ROW and utility relocations.				

## Notes:

- 1. Pavement section assumed and based on other projects in the area, geotechnical investigation to be completed in future phases.
- 2. Operation and Maintenance Cost details \$1,500 annually for electricity and routine maintenance \$8,000 annually. Signal controller upgrade \$10,000 every 10 years. Routine traffic signal time updates \$3,000, every three to five years. Sources: <a href="https://www.howmuchisit.org/traffic-light-cost/">https://www.howmuchisit.org/traffic-light-cost/</a> (updated 8-15-18) and <a href="https://www.itskrs.its.dot.gov/its/benecost.nsf/ID/215f723db93d293c8525725f00786fd8">https://www.itskrs.its.dot.gov/its/benecost.nsf/ID/215f723db93d293c8525725f00786fd8</a> (dated 1-19-2007). Assumed 25-year life for signal post and arms.
- 3. Source: <a href="https://www.iihs.org/topics/roundabouts">https://www.iihs.org/topics/roundabouts</a>
- 4. From Fox Farm Road at Walterscheid Avenue Supplement Analysis Life Cycle Benefit/Cost of Intersection Improvement Alternatives, Western Research and Development, 2017. Value is 2016 Present Value through 2040.

No adjustment for inflation has been included in the O&M costs.

Assumed pavement maintenance and signage upgrade/replacement is comparable for all intersection options.

Electric Transmission Line Easements and Guidelines

OCT 12 1960 3:45 PM

Contract No. 14-06<sup>0</sup>703-1190 Cheyenne-Sidney Transmission Line

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF RECLAMATION

## MISSOURI RIVER BASIN PROJECT

CONTRACT AND GRANT OF ELECTRIC TRANSMISSION LINE EASEMENT

THIS CONTRACT, made this 28th day of September 1960, pursuant to the Act of Congress approved June 17, 1902 (32 Stat. 388) and acts amendatory thereof or supplementary thereto, between the UNITED STATES OF AMERICA, hereinafter referred to as United States and represented by the officer executing this instrument, his duly appointed successor, or his duly authorized representative, hereinafter called the contracting officer, and JOHN C. ARP and MILDRED K. ARP, Husband and Wife

hereinafter collectively referred to as vendor:

WITNESSETH:

The following grant and the following mutual covenants by and between the parties:

A part of Blocks 74, 75, 76, the alleys through said blocks, Colerado Avenue, Wyoming Avenue, Kansas Avenue, and Seventh Street adjoining said blocks of the Interior Heights Addition, a subdivision of the SELNEL Section 7, Township 13 North, Range 66 West of the 6th Principal Meridian, as shown by the plat of Interior Heights Addition to the City of Cheyenne, dated February 28, 1890, and filed of record March 3, 1890, in Book 1 of plats at Pages 46 and 47 of the land records of Laramie County, Wyoming. Containing 1.35 acres, more or less, and being more particularly described as follows:

All that part of Colorado Ave. which lies west of Lots 46, 47, and 48 in said Block 76; Lots 2, 3, 46, 47 and that part of the alley adjoining Lots 1, 2, 3, 46, 47, and 48 in said Block 76; that part of Wyeming Ave. that lies between Lots 1, 2, and 3 of said Block 76 and Lots 46, 47 and 48 in said Block 75; Lots 2, 3, 46, 47 and that part of the alley adjoining Lots 1, 2, 3, 46, 47, 48 in said Block 75; that part of Kansas Ave. that lies between Lots 1, 2 and 3 of said Block 75 and Lots 46, 47 and 48 in said Block 74; Lots 2, 3, 46, 47 and that part of the alley adjoining Lots 1, 2, 3, 46, 47, 48 in said Block 74; All that part of

Orected as to engineering data;

By Character Community (Office Engineer,
Rureau of Reclamation

)

Seventh Street that lies north of the east 75 feet of said Block 74.

- 2. Said transmission line and every part thereof shall, where it crosses vendor's land, be confined to the area granted under this easement except that the United States shall have the right and privilege of placing and maintaining guys and anchorages at greater distance from said center line where necessary to support said transmission line. However, in the event the installation of such additional guys and/or anchorages is determined to be necessary by the contracting officer, additional payment based upon an appropriate appraisal approved by the Secretary of the Interior or his duly authorized representative will be made to the vendor.
- The grant of easement herein contained shall include the perpetual right to enter upon said premises, construct, reconstruct, operate, maintain, and make necessary replacements in connection with said transmission line and to permit the attachment of wires of others, together with the present and future right to clear said right-of-way or to trim orchard trees to the extent deemed necessary by the contracting officer to protect the rights and privileges herein granted, and to keep the same clear of brush, timber, inflammable structures and fire hazards, provided that fire hazards shall not be interpreted to include growing crops. All brush, timber or inflammable structures removed pursuant to the terms hereof shall become the property of the United States and may be disposed of by sale, burning, or otherwise; Provided, That said rights shall only be exercised in such a manner that no fire hazard shall be created hereby. The grant of easement shall not preclude the right to cultivate, use and occupy said premises for any purposes which will not, in the determination of the contracting officer, constitute a hazard to life or limb, interfere with any of the rights and privileges herein granted to the United States, or endanger any of its property, but said right of cultivation, use and occupancy shall not extend to or include the erection of any structure, including the drilling of wells, or permission to the public to use any part thereof, without advance written permission of the contracting officer. The United States shall exercise due care and diligence in the exercise of the rights and privileges herein granted to it. In case of permanent abandonment of said right-of-way, the title and interest herein granted shall end, cease and determine.
- 4. The grant of easement herein contained is subject to the rights-of-way of any nature whatsoever of record and in use.
- 5. It is a condition precedent to the payment to the vendor of the sum named herein that the title to the premises described herein shall be vested in the vendor, subject only to the interest of the United States hereunder and to the matters set out in Article 4 hereof and to such other defects, interests, or encumbrances as may be acceptable to the United States.

STATE OF VYVORIAS

My Commission expires: ~27 73 /964

- 6. It is understood and agreed that if the Secretary of the Interior determines that the interest acquired hereunder by the United States should also be the subject of acquisition through judicial procedure, either to procure a safe title or for any other reason, then the compensation to be claimed by the vendor and the award to be made for said interest in said proceeding shall be upon the basis of the consideration herein provided.
- 7. Vendor warrants that no person or agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for a commission, percentage, brokerage, or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by the vendor for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this contract without liability or in its discretion to require the vendor to pay, in addition to the contract price or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.
- 8. As complete consideration for the above grant of easement, the United States agrees to pay vendor the sum of Nine Hundred Eighty and No/100 - Dollars (\$ 980.00) and if damage occurs to crops, trees, vines, seedlings, or improvements within the said right-of-way as a result of and during construction of the transmission line, payment will be made by the United States on basis of an appraisal approved by the Secretary of the Interior or his duly authorized agent.
- 9. No member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may arise herefrom but this restriction shall not be construed to extend to this contract if made with a corporation or company for its general benefit.

IN WITNESS WHEREOF, the parties hereto have caused this agreement to be executed the day and year first above written.

## MISSOURI RIVER BASIN PROJECT

CONTRACT AND GRANT OF ELECTRIC TRANSMISSION LINE EASEMENT

THIS CONTRACT, made this 19th day of December, 1960, pursuant to the Act of Congress approved June 17, 1902 (32 Stat. 388) and acts amendatory thereof or supplementary thereto, between the UNITED STATES OF AMERICA, hereinafter referred to as the United States and represented by the officer executing this instrument, his duly appointed successor, or his duly authorized representative, hereinafter called the contracting officer, and CHARLES H. LEISHER, a widower, hereinafter referred to as vendor:

WHEREAS, the vendor conveyed to the United States a right-of-way for transmission line purposes under Grant of Easement No. I35r-150 dated July 12, 1938, recorded at page 158, book 343, of the records of Laramie County, Wyoming, over and across the lands of the vendor and,

WHEREAS, the United States in the operation and enlargement of said transmission line requires 25 feet of additional right-of-way; and,

WHEREAS, it is the intention of the parties hereto by this instrument to enlarge and define the right-of-way occupied and to be occupied by the United States,

## NOW THEREFORE WITNESSETH:

In consideration of the foregoing premises, the following grant and the following mutual covenants by and between the parties:

l. For the consideration hereinafter expressed, vendor does hereby grant unto the United States, its successors and assigns, a perpetual easement 75 feet in width, being  $37\frac{1}{2}$  feet left of and  $37\frac{1}{2}$  feet right of the following described center line, together with the right and privilege to construct, reconstruct, operate, inspect, and maintain one electric transmission line, consisting of a single line of structures supporting one or more electrical power circuits, together with all poles, towers, crossarms, cables, wires, guys, supports, fixtures and such other structures, installations and facilities used or useful in the construction, operation and maintenance of said transmission line, across the following described land situated in the County of Laramie, State of Wyoming, to wit:

Beginning at a point on the south boundary of the  $NE_{\frac{1}{4}}^{1}NE_{\frac{1}{4}}^{1}$  of Section 7, T. 13 N., R. 66 W., 6th P. M., said

Oncoked as to engineering data:

point being situate 70.2 feet more or less, westerly from the southeast corner of said  $NE_{\frac{1}{4}}^{\frac{1}{4}}NE_{\frac{1}{4}}^{\frac{1}{4}}$  of Section 7; thence N. 1°32' E. a distance of 969.4 feet, more or less, to a point; thence S. 88°58' E. a distance of 59 feet, more or less, to a point on the east boundary of said  $NE_{\frac{1}{4}}^{\frac{1}{4}}NE_{\frac{1}{4}}^{\frac{1}{4}}$  of Section 7, said point being situate southerly 349 feet, more or less, from the northeast corner of said Section 7, containing 1.77 acres, more or less.

- 2. Said transmission line and every part thereof shall, where it crosses vendor's land, be confined to the area granted under this easement.
- 3. The grant of easement herein contained shall include the perpetual right to enter upon said premises, construct, reconstruct, operate, maintain, and make necessary replacements in connection with said transmission line, together with the present and future right to clear said right-of-way or to trim trees to the extent deemed necessary by the contracting officer to protect the rights and privileges herein granted, and to keep the same clear of brush, timber, inflammable structures and fire hazards, provided that fire hazards shall not be interpreted to include growing crops. All brush, timber or inflammable structures removed pursuant to the terms hereof shall become the property of the United States and may be disposed of by sale, burning, or otherwise; Provided, That said rights shall only be exercised in such a manner that no fire hazard shall be created hereby. The grant of easement shall not preclude the right to cultivate, use and occupy said premises for any purposes which will not, by the determination of the contracting officer, constitute a hazard to life or limb, interfere with any of the rights and privileges herein granted to the United States, or endanger any of its property, but said right of cultivation, use and occupancy shall not extend to or include the erection of any structure, including the drilling of wells, or permission to the public to use any part thereof, without advance written permission of the contracting officer. The United States shall exercise due care and diligence in the exercise of the rights and privileges herein granted to it. In case of permanent abandonment of said right-of-way, the title and interest herein granted shall end, cease and determine.
- 4. The grant of easement herein contained is subject to the rights-of-way of any nature whatsoever of record and in use.
- 5. It is a condition precedent to the payment to the vendor of the sum named herein that the title to the premises described herein shall be vested in the vendor, subject only to the interest of the United States hereunder and to the matters set out in Article 4 hereof and to such other defects, interests, or encumbrances as may be acceptable to the United States.

- 6. It is understood and agreed that if the Secretary of the Interior determines that the interest acquired hereunder by the United States should also be the subject of acquisition through judicial procedure, either to procure a safe title or for any other reason, then the compensation to be claimed by the vendor and the award to be made for said interest in said proceeding shall be upon the basis of the consideration herein provided.
- 7. Vendor warrants that no person or agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for a commission, percentage, brokerage, or contingent fee, excepting bona fide employees or bona fide established commercial agencies maintained by the vendor for the purpose of securing business. For breach or violation of this warranty, the Government shall have the right to annul this contract without liability or in its discretion to require the vendor to pay, in addition to the contract price or consideration, the full amount of such commission, percentage, brokerage, or contingent fee.
- 8. As complete consideration for the above grant of easement, the United States agrees to pay vendor the sum of Seven Hudred Fifty and no/100 Dollars (\$750.00) and if damage occurs to crops, trees, vines, seedlings, or improvements within the said right-of-way as a result of and during construction of the transmission line, payment will be made by the United States on basis of an appraisal approved by the Secretary of the Interior or his duly authorized agent.
- 9. No member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may arise herefrom but this restriction shall not be construed to extend to this contract if made with a corporation or company for its general benefit.

IN WITNESS WHEREOF, the parties hereto have caused this agreement to be executed the day and year first above written.

## WESTERN AREA POWER ADMINISTRATION GENERAL GUIDELINES CONCERNING THE USE OF ELECTRIC TRANSMISSION LINE RIGHTS-OF-WAY

Rights usually reserved to the landowner include the right to cultivate, occupy, and use the land for any purpose that does not conflict with WAPA's use of its easement. To avoid potential conflicts, it is WAPA's policy to review all proposed uses within the transmission line easement. We consider (1) Safety of the public, (2) Safety of our Employees, (3) Restrictions covered in the easement, (4) WAPA's maintenance requirements, and (5) Protection of the transmission line structures and (6) Road or street crossings.

The outline below lists the considerations covered in the review. Please note that some items may overlap. This outline has been prepared only as a guide; each right-of-way encroachment is evaluated on an individual basis.

#### 1. Safety Of The Public

- A. Approval depends, to a large extent, on the type and purpose of the development. WAPA takes our obligation to public safety very seriously. To insure our obligation, any use of the easement that will endanger the public will not be allowed or strongly discouraged (e.g., kite flying is prohibited).
- B. Metal fences must be grounded in accordance with applicable safety codes.
- C. Lighting standards shall not exceed a maximum height of 15 feet and not placed directly under the conductors (wires). All lighting standards must be grounded.
- D. All vegetation on the easement shall not exceed a maximum height of **3 feet** at maturity. No vegetation planted within **37 feet** of structures.
- E. Structures are not allowed on the easement. Structures include, but are not limited to, buildings, sheds, swimming pools, basketball courts, tennis courts, gazebos, etc.
- F. No ground elevation changes are allowed which would reduce the ground to conductor clearance below 30 feet.

#### 2. Safety Of Our Employees

Vegetation and encroachments into our right-of-way requires our crews to take action, which places them at risk. Therefore, any vegetation or encroachments that present a risk to our employees will not be allowed.

#### 3. Restrictions Covered In The Easement

The easement prohibits the following: (1) any use that will interfere with or damage the equipment of the United States, (2) digging or drilling of a well, (3) erecting buildings or

structures, (4) placing or piling up material within the easement boundaries. The easement gives WAPA the right to remove trees, brush or other objects interfering with the safe operation and maintenance of the line.

#### 4. Maintenance Requirements

- A. Berms shall not be placed next to the base of the transmission line tower.
- B. Any proposed improvements to the easement (including grading, parking lot, lighting, landscaping, fences, etc.), must be reviewed by WAPA to assure that they will not interfere with the safe operation and maintenance of the transmission line.
- C. A 16-foot gate is required in any fences that cut off access along our easement.
- D. Thirty (30) feet of unobstructed access is to be maintained around towers.

#### 5. Protection Of The Transmission Line Structure (Towers, Guy Wires, etc.)

- A. If the proposed use increases the possibility of a motor vehicle hitting the transmission line structure, an appropriate guard rail shall be installed to protect the structure (e.g., parking lots or roads).
- B. Trench digging, which would weaken or damage the structure, is prohibited.
- C. No ground elevation changes are allowed within 37 feet of the structure, and in no case shall the conductor to ground clearance be reduced below code limitation.

#### 6. Roads Or Street Crossings

WAPA's policy is to have roads or streets cross the easement at right angles, or as nearly at right angles as possible, so that a minimum area of the road or street lies within the transmission line easement.

Requests for permission to use the transmission line right-of-way should be submitted to: Western Area Power Administration, Attn: Realty Specialist, P.O. Box 3700, Loveland, CO 80539. Or rogers@wapa.gov

## I. INTRODUCTION

The Walterscheid Boulevard Corridor is an important north-south multimodal transportation connection for the southwest Cheyenne, Wyoming area. Running parallel to and west of the South Greeley Highway (US Highway 85) corridor, it currently serves as a minor arterial roadway connecting from College Drive north under Interstate 80 (I-80) to Deming Drive, which provides connectivity to downtown Cheyenne.

Walterscheid Boulevard is anticipated to experience significant growth in future years due to development activity and completion of additional transportation infrastructure in the area. While its current classification is minor arterial, it possesses numerous characteristics more consistent with a collector roadway. Given the projected increased traffic volumes and multimodal needs along this corridor and the need to update its design to better fit arterial standards, this roadway requires improvement.

The Cheyenne Metropolitan Planning Organization (MPO) has initiated a corridor planning effort to understand the infrastructure needs, develop analyses to quantify the needs, provide recommendations, and furnish preliminary design plans to set the stage for future construction. The corridor planning process includes public and stakeholder outreach to help inform the process and recommendations.

This report assesses existing and projected future corridor conditions along Walterscheid Boulevard and identifies improvements needed to maintain acceptable operational levels into the future.

## Transportation Operations Analysis

#### Purpose of Analysis

This analysis of existing and projected future conditions outlines deficiencies of the corridor to inform needed improvements.

## Scope of Analysis

This study included collecting the following data:

- I. Intersection and corridor multimodal traffic volumes
- 2. Travel speeds
- 3. Multimodal facility characteristics

- 4. Surrounding land uses
- 5. Crash history
- 6. Travel demand model information

The above data were used to analyze existing conditions and develop future forecasts.. Using the forecasted data, various improvement alternatives were analyzed, and final recommendations are provided.

The following information is included in this report:

- Existing Conditions This section describes existing infrastructure, vehicular information, and data collected.
- Future No Action Conditions This section evaluates the anticipated volumes and operations assuming no improvements are made to the study corridor.
- Alternative Analysis This section evaluates several proposed alternatives and summarizes the anticipated results of each.
- **Recommendations** This section summarizes the final improvement recommendations for near term and ultimate improvement scenarios.

## Methods and Assumptions

The study area will include the following intersections:

I. W College Drive

2. W Prosser Road

3. W Allison Road

4. W Jefferson Road

5. W Fox Farm Road

6. Deming Drive

Table I summarizes the parameters used for Highway Capacity Manual (HCM) 6th Edition analyses.

Table I. Highway Capacity Manual Analysis Parameters

		Traffic Param	eter	
Intersection	% Heavy Vehicles	Peak Hour Factor	Saturation Flow	Queue
intersection	AM(Off-Peak)[PM]	AM(Off-Peak)[PM]	Rate (vehicles per hour per lane)	Length Percentile
W College Dr	6%(3%)[5%]	0.76(0.86)[0.80]		
W Prosser Rd	3%(2%)[3%]	0.72(0.82)[0.65]		
W Allison Rd	2%(2%)[2%]	0.64(0.73)[0.73]	1900	95th
W Jefferson Rd	1%(2%)[2%]	0.71(0.79)[0.81]	1900	75th
W Fox Farm Rd	2%(2%)[3%]	0.78(0.79)[0.82]		
Deming Dr	2%(2%)[3%]	0.80(0.81)[0.87]		

The measures of effectiveness for this effort will include the following:

- Intersection operations use Level of Service (LOS) per HCM as calculated by Synchro. Potential roundabout alternatives will also be analyzed using Rodel.
- Multimodal LOS (transit, bicycle, and pedestrian) use HCM 6th Edition methods.
- The primary mobility goal is LOS D or better for intersection operations. LOS C is the goal for all multimodal operations.

The full Methods and Assumptions document can be found in **Appendix A**.

## II. EXISTING CONDITIONS

## II.A. Roadway Network

Walterscheid Boulevard is a north-south minor arterial in Cheyenne, Wyoming. Currently, the roadway alignment exists as Division Avenue just south of E College Drive and turns into Deming Drive to the north of its underpass below Interstate 80 (I-80). It is currently a two-lane roadway with a speed limit of 35 miles per hour (mph) throughout the corridor until just north of Fox Farm Road, where the posted speed changes to 30 mph. A southbound left turn lane and northbound right turn lane are provided at its intersection with Deming Drive, and a southbound right turn lane is provided at its intersections with Allison Road and Fox Farm Road.

## II.B. Surrounding Land Uses

The Walterscheid Boulevard corridor is mainly surrounded by residential land uses. Rossman Elementary School is located in the west of Walterscheid Boulevard north of E College Drive. South High School is proximate to the corridor, located west of Walterscheid Boulevard along Allison Road. Some area to the west of the roadway between Allison Road and Fox Farm Road is undeveloped. Walterscheid Boulevard is planned to connect further south via an improved Division Avenue, where there is significant potential for future development and/or redevelopment..

## II.C. Traffic Volumes

Traffic volumes at the intersections of Walterscheid Boulevard with W Prosser Road and E College Drive were collected on March 8 and 9, 2021. The remainder of the intersections were collected on February 22 and 23, 2021. The traffic count data can be found in **Appendix B**.

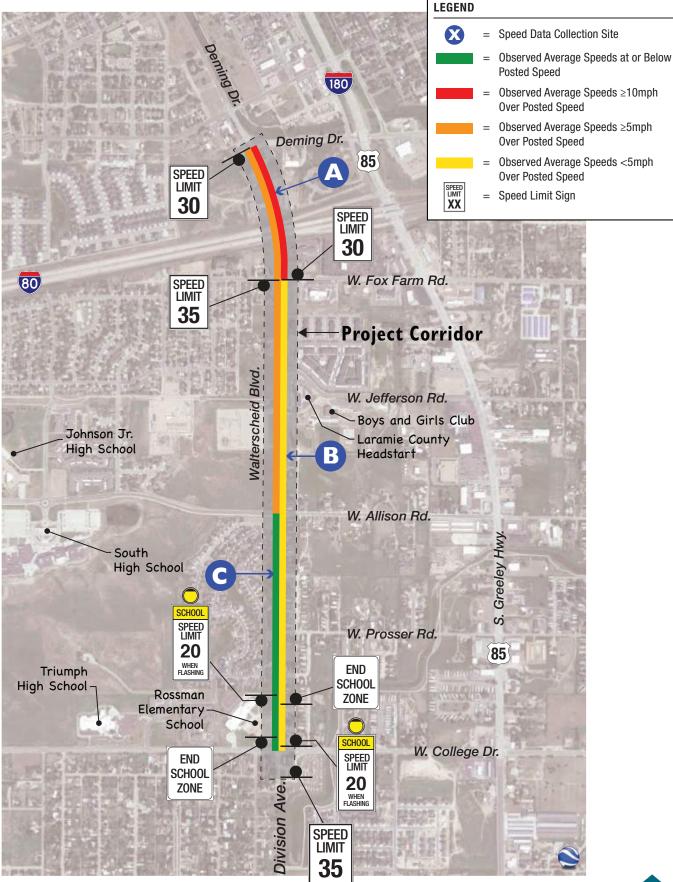

## II.D. Travel Speeds

The posted speed limit in the majority of the corridor is 35 mph; however, just north of Fox Farm Road the posted speed limit changes to 30 mph. The roadway also has a school speed zone of 20 mph from W College Drive to just past the existing Rossman Elementary School. The majority of observed speeds were less than 5 mph over the speed limit; however, significant speeding was observed in the northbound (downhill) direction north of Fox Farm Road. The segment between Fox Farm Road and Deming Drive experienced average speeds of greater than 10 mph over the posted speed limit. **Figure I** shows posted speed locations and observed speeding behavior. Speed data are provided in **Appendix C**.

#### II.E. Multimodal Conditions

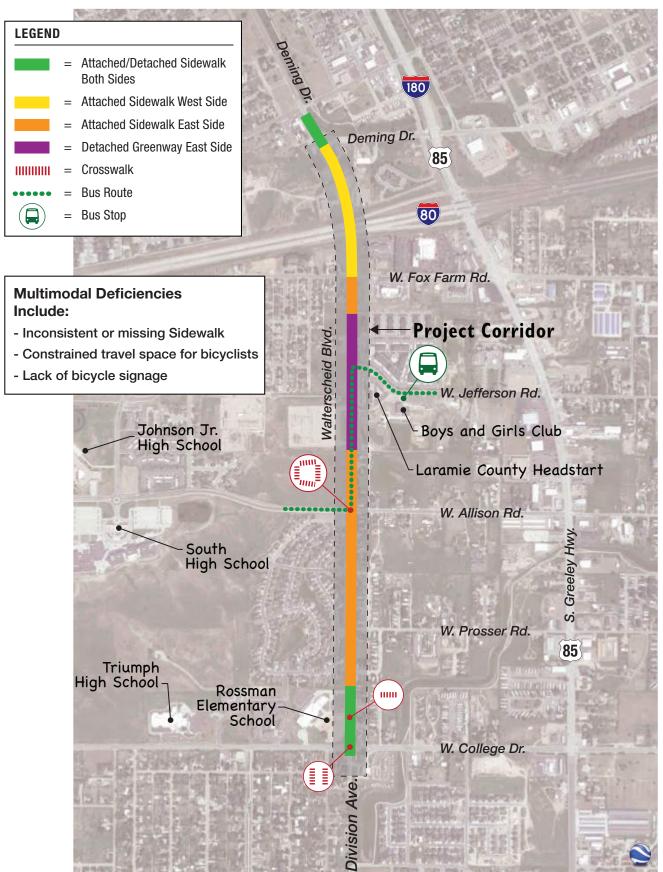

Pedestrian, bicycle, and transit facilities are present in this corridor but lack adequacy and continuity. Sidewalks in the area are inconsistent; specifically, the majority of pedestrian facilities exist on the east side of Walterscheid Boulevard. However, in between Fox Farm Road and Deming Drive, the sidewalk switches to the west side of the road without access to a crosswalk. The Cheyenne Greenway runs alongside the east edge of Walterscheid Boulevard and crosses below Waltersheid Boulevard west of Jefferson Road. **Figure 2** outlines existing multimodal facilities.

## II.F. Crash History

The Cheyenne MPO provided crash history along the Walterscheid Boulevard corridor for a 5-year timeframe, 2016–2020. The intersection of Allison Road with Walterscheid Boulevard shows the most crashes within this timeframe with the majority of those crashes being rear-end or angle crashes. The Walterscheid Boulevard/College Drive intersection also experienced a higher frequency of rear-end crashes; however, this is expected as these are the only signalized intersections along the segment and signalized intersections often experience a higher frequency of rear-end crashes. Allison Road also experienced the only two pedestrian/bike crashes in the entirety of the corridor. **Figure 3** shows the crash history along the corridor and any notable patterns. Supporting crash data can be found in **Appendix D**.

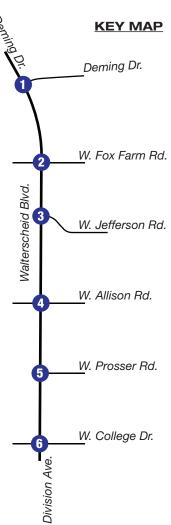

## II.G. Traffic Operations

Traffic operations within the study area were evaluated according to techniques documented in the Transportation Research Board HCM, 6<sup>th</sup> Edition (2016). Level of service (LOS) is a qualitative measure of traffic operational conditions based on roadway capacity and vehicle delay. Levels of service are described by a letter designation ranging from LOS A to LOS F; with LOS A representing the best possible conditions and LOS F representing congested conditions. For unsignalized intersections, LOS is calculated for movements that must yield right-of-way to other traffic movements. For signalized traffic control, LOS represents an average of the delays for all movements at the intersection. Synchro traffic analysis software was used to develop the LOS calculations based on the HCM 6<sup>th</sup> Edition methodology.

Existing traffic volumes collected and existing lane geometry were used to evaluate existing operations along the study corridor. Currently, all signalized intersections operate at LOS B or better for all peak periods. The majority of unsignalized movements operate at LOS D or better with the exception of the northbound movement at the intersection of Walterscheid Boulevard with Fox Farm Road, which is anticipated to operate at LOS E during the AM peak hour. **Figure 4** shows existing lane geometry, volumes, and operations. **Appendix E** provides the LOS worksheets for existing conditions.

Intersection #	Cross Street	Total Crashes, 2016-2020
0	Deming Drive	1
2	Fox Farm Road	11
3	Jefferson Road	2
4	Allison Road	13
5	Prosser Road	1
6	College Drive	8

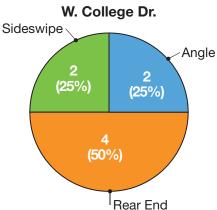

## **Crash Types at Higher Frequency Intersections**

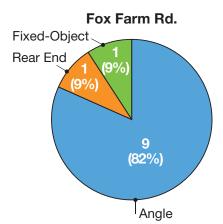

- 2 reported ped/bike crashes (only ped/bike crashes reported on corridor)

Elevated angle crash pattern

 Limited sight distance looking south along Walterscheid may be contributing to crashes

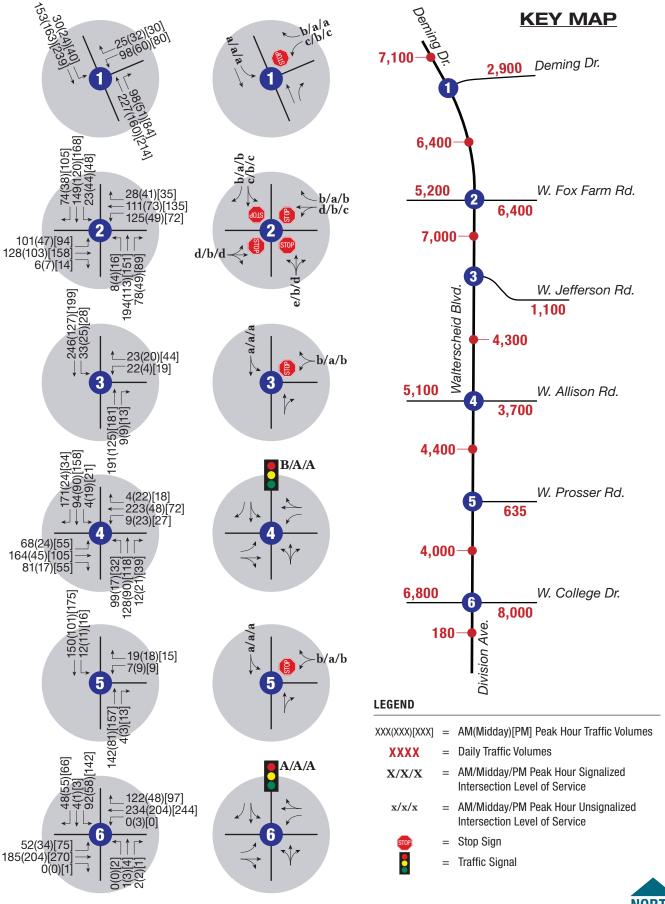

- Rear-End type consistent with signalized intersection patterns
- Insufficient roadway striping may be contributing to sideswipe crashes

- Angle crash pattern
- unfamiliar drivers may not anticipate the AWSC leading to angle crashes

## III. FUTURE NO ACTION CONDITIONS

Year 2045 No Action conditions represent the anticipated traffic conditions given future growth, but no roadway or network improvements.

## III.A. Travel Demand Forecasting

To develop future background volumes, a growth rate was applied to existing volumes (shown on **Figure 4**). The Year 2045 Cheyenne MPO Travel Demand Model (TDM) developed for the Connect2045 Regional Transportation Plan Update was used to develop traffic growth rates and forecasts for the study corridor. The Connect2045 future roadway plan includes widening of Walterscheid Boulevard to 5 lanes as a Tier 2 fiscally constrained project, and Walterscheid Boulevard is accordingly modeled as a 5 lane roadway through the project area in the TDM. Upon review of the initial modeling results and discussion with the project team, it was determined that the TDM configuration should be altered to reflect a 3-lane section rather than 5 lanes because:

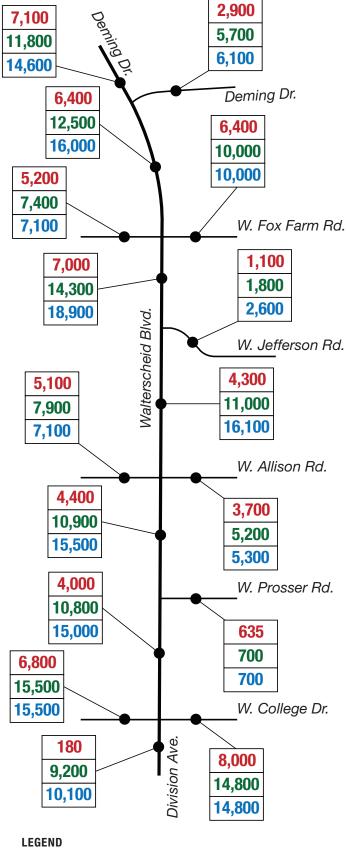

- I. Forecasts coming out of the TDM based on a 5 lane Walterscheid Boulevard showed unrealistically high traffic volume growth rates for the corridor, as much as tripling current traffic volumes.
- 2. Widening Walterscheid Boulevard to 5 lanes is not physically feasible in the near term future given right-of-way constraints in the area.

**Table 2** provides projected daily traffic volumes for the study area roadways based on a 3-lane Walterscheid. **Figure 6** shows projected year 2045 future volumes for 3 and 5 lane assumptions.

Table 2. Summary of Growth Forecasts

Roadway	Location	2019 Daily Volume	2045 Daily Volume
	N/O Deming	7100	11,800
	N/O Fox Farm Road	6400	12,500
	N/O Jefferson Road	7000	14,300
Walterscheid Boulevard	N/O Allison Road	4300	11,000
Bodievard	N/O Prosser Road	4400	10,900
	N/O College Drive	4000	10,800
	S/O College Drive	180	9200
Deming Drive	E/O Walterscheid Boulevard	2900	5700
Face Farms Daniel	W/O Walterscheid Boulevard	5200	7400
Fox Farm Road	E/O Walterscheid Boulevard	6400	10,000
Jefferson Road	E/O Walterscheid Boulevard	1100	1800
Allison Road	W/O Walterscheid Boulevard	5100	7900
Allison Road	E/O Walterscheid Boulevard	3700	5200
Prosser Road	E/O Walterscheid Boulevard	635	700
Callaga Duice	W/O Walterscheid Boulevard	6800	15,500
College Drive	E/O Walterscheid Boulevard	8000	14,800

XXXX Daily Traffic Volumes (Base Year)

XXXX = 2045 Daily Traffic Forecasts (3-Lane Walterscheid) XXXX = 2045 Daily Traffic Forecasts (5-Lane Walterscheid)

It should be noted that Walterscheid Boulevard south of College Drive, also known as Division Avenue, is expected to extend further south and provide more connectivity in the future. This connection will increase volumes south of College Drive.

Though not used as the basis for project forecasts, **Appendix H** provides information regarding the outcomes associated with the higher 5-lane based forecasts.

As shown on **Figure 6**, Walterscheid Boulevard is anticipated to carry a maximum daily traffic volume of about 14,300 vehicles per day (vpd) just south of Fox Farm Road. College Drive is anticipated to carry over 15,000 vpd west of Walterscheid Boulevard. Fox Farm Road is anticipated to grow to 10,000 vpd east of Walterscheid Boulevard. Jefferson Road is anticipated to experience 1,800 vpd.

## III.B. Traffic Operations

LOS traffic analysis procedures discussed previously were applied to the background volumes for the future planning horizon. **Figure 6** illustrates the capacity analyses for future background volumes with no geometry improvements. **Appendix F** contains the background LOS worksheets.

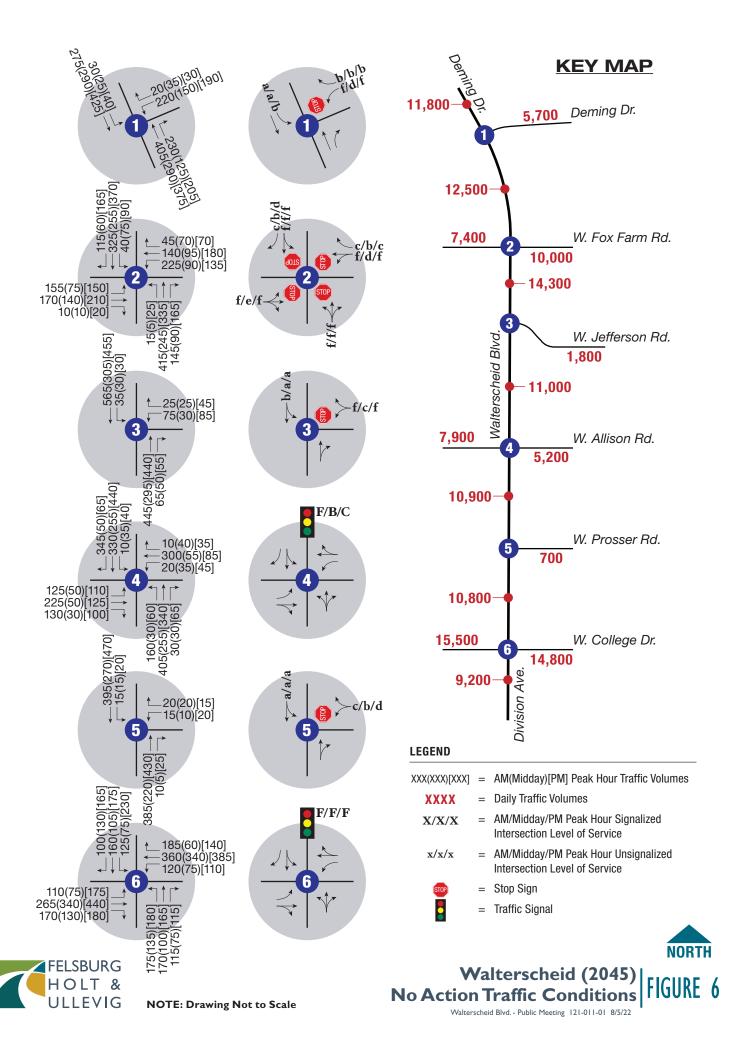

The following outlines projected LOS F conditions in the study area:

- College Avenue/Walterscheid Boulevard Signalized
  - The entire intersection is anticipated to operate at LOS F for all peak hours.
- Allison Road/Walterscheid Boulevard Signalized
  - o The intersection would operate at overall LOS F during AM and PM peak hours.
- Jefferson Road/Walterscheid Boulevard Two-Way Stop-Control
  - The westbound approach is anticipated to operate at LOS F during the AM and PM peak hours.
- Fox Farm Road/Walterscheid Boulevard All-Way Stop-Control
  - The northbound movement is anticipated to be LOS F during all peak hours.
  - The southbound left/through movement is anticipated to be LOS F during all peak hours.
  - The eastbound movements is anticipated to be LOS F during the AM and PM peak hours and LOS E during the midday peak hour.
  - The westbound left/through movement is anticipated to be LOS F during the AM and PM peak hours.
- Deming Drive/Walterscheid Boulevard Two-Way Stop-Control
  - The westbound left turn movement is anticipated to operate at LOS F during the AM and PM peak hours and LOS D during the midday peak hour.

## III.C. Summary of Needs

Intersection improvements would be necessary to provide acceptable future traffic operations. Such improvements could include traffic control changes, added turn lanes, and/or additional through lanes along Walterscheid Boulevard.

## IV. ANALYSIS OF ALTERNATIVES

The following subsections describe evaluated alternatives for both the Walterscheid Boulevard corridor and each study intersection along the corridor.

#### IV.A. Walterscheid Boulevard Section

As previously discussed, Walterscheid Boulevard has been identified in regional planning efforts as a future 5-lane roadway. Upon review and discussion with the project team, it was determined that widening Walterscheid Boulevard to a 5-lane roadway would not be feasible in the near-term future due to Right-of-Way constraints.

A three-lane cross-section was found to be the most feasible alternative for the corridor. Although the section will experience heavy volumes with one-lane in each direction, a Two-Way Left-Turn Lane (TWLTL) will be provided to serve north and southbound left turns at all intersections and to provide median storage for drivers making left turns from the minor roadway intersections.

It is recommended that all turn lanes be designed to meet Cheyenne Unified Development Code criteria.

#### IV.B. Intersection Alternatives

#### College Drive

While this intersection is already signalized, several additional auxiliary lanes are recommended to improve operations at this intersection. for the future condition. Exclusive left and right turn lanes should be provided along all approaches to best serve this intersection. However, even with these additions, the intersection would operate at undesirable levels in the AM and PM peak hours. This intersection should continue to be monitored for further evaluation in the future.

#### **Prosser Road**

The Prosser Road intersection is anticipated to operate at acceptable levels with the provision of an exclusive southbound left turn lane.

#### Allison Road

Similar to College Drive, the Allison Road intersection is currently signalized and would solely need additional auxiliary turn lanes to maintain acceptable operations in the future. This condition would require the implementation of northbound, eastbound, and westbound right turn lanes. The three-lane section along Walterscheid would also provide northbound and southbound left turn lanes at this intersection.

#### Jefferson Road

This intersection should implement a northbound exclusive right turn lane, and the three-lane cross-section would provide a southbound left turn lane as well. With these improvements, the westbound movement would still experience LOS F during the AM and PM peak hours; however, it is not uncommon for side-street stop-controlled movements to experience higher than average delays during peak hours. This intersection is not anticipated to meet signal warrant criteria. The future addition of a west leg to this intersection could be considered to serve development.

#### Fox Farm Road

Some movements at the current all-way stop controlled intersection are not operating acceptably, and this condition is expected to worsen into the future without improvements. Signalization is anticipated

to be warranted based on analysis of future year conditions. Signalization, along with the addition of north and southbound right and left turn lanes, an eastbound left turn lane and converting the existing westbound lane geometry from a shared left/through to a shared through/right, would result. These improvements would result in LOS C operations for all peak periods in the future scenario.

Installation of a roundabout has been evaluated as a potential alternative due to the high-volume nature of all approaches. A single lane roundabout, meaning one shared left/through/right lane for all approaches, would be adequate to provide acceptable operational levels for this intersection based on future volumes. This lane geometry would cause the overall intersection operations to be LOS C or better for all peak periods.

The signalization and roundabout options are roughly equivalent operationally. Therefore the decision to implement one or the other should be driven by other factors beyond traffic operations.

## **Deming Drive**

The Walterscheid Boulevard/Deming Drive intersection is currently unsignalized, with STOP sign control along the westbound approach. Analyses of Year 2045 conditions indicate that longer queues and operational concerns will worsen into the future without treatment. Signalized operations were tested and it was found that the intersection would operate at LOS B or better with the implementation of a signal in the future scenario.

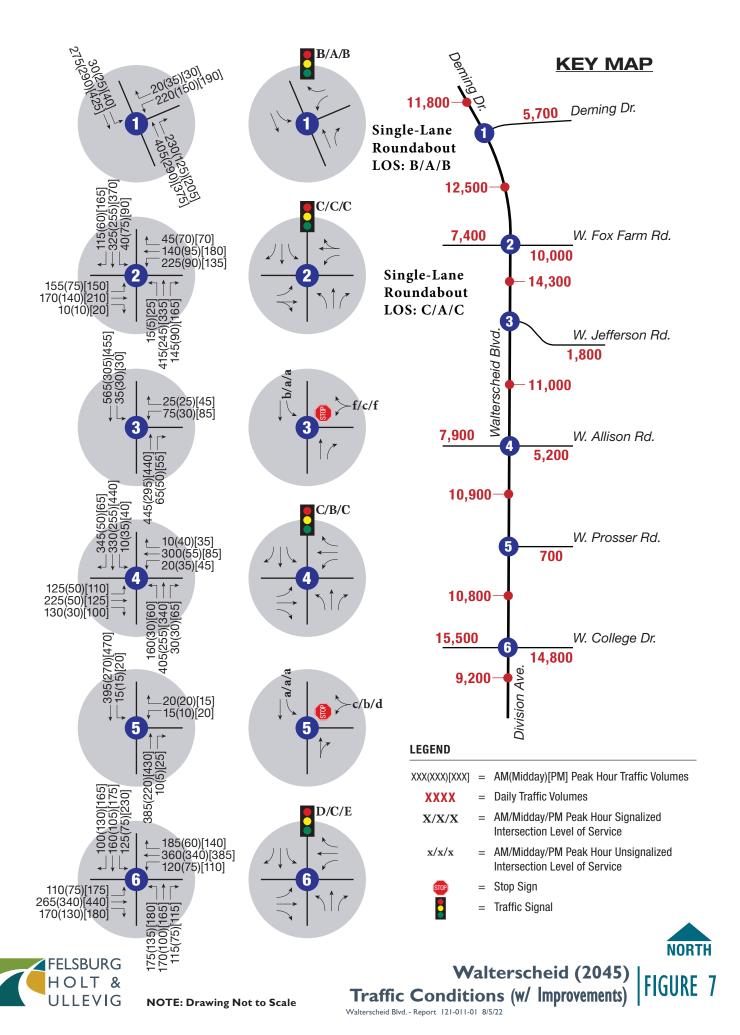

Signal warrant analyses of projected future traffic volumes indicate that traffic volumes would not exceed warrant criteria unless the criteria are reduced because it is assumed that 85<sup>th</sup> percentile traffic speeds along Walterscheid Boulevard approaching the intersection exceed 40 miles per hour. While such a condition exists along northbound Walterscheid Boulevard approaching Deming Drive, it is unreasonable to assume this condition will persist into the long term future. Therefore, the intersection is not projected to meet signal warrant criteria by the Year 2045.

The Walterscheid Boulevard/Deming Drive intersection was also evaluated as a roundabout. Similar to the potential Fox Farm roundabout, this intersection was evaluated as a single lane roundabout with all shared approaches. This geometry would result in LOS B or better conditions for all peak periods in the future scenario.

It is recommended that once traffic volumes grow to the level of meeting signal warrants at this intersection, a roundabout be installed. The roundabout would operate acceptably and would serve as a traffic calming influence on speeding traffic in the area.

All evaluated alternatives and their respective operations are shown on **Figure 7**. LOS worksheets for the build alternatives are shown in **Appendix G**.

#### V. RECOMMENDATIONS

The following subsections describe the recommended alternatives for the Walterscheid Boulevard corridor and the respective intersections.

#### V.A. Corridor Section

Traffic volumes along the Walterscheid Boulevard corridor from College Drive to Deming Drive is anticipated to grow significantly in coming years. The roadway is anticipated to experience up to 14,300 vpd. The Walterscheid Boulevard corridor is recommended to provide a three-lane section, providing a Two-Way Left-Turn Lane (TWLTL) for the northbound and southbound directions.

Future widening to 5 lanes is not anticipated at this time.

#### V.B. Recommended Actions

As outlined in the alternatives analysis, the majority of intersections would warrant signalization and require additional auxiliary turn lanes by the future scenario. While the implementation of auxiliary turn lanes and signals are anticipated to address the majority of future poor operations in the study area, College Drive is anticipated to experience LOS E during the PM peak hour. This intersection is expected to continue to serve as a major junction in the area and would require additional improvements to operate at acceptable levels; however, current right-of-way constrains justifiable improvements.

The intersections of Deming Drive and Fox Farm Road with Walterscheid Boulevard have been outlined for potential roundabout installation. Both roundabouts would consist of all shared approaches and have one circulating lane. Both the signalized intersection and roundabout alternatives are anticipated to provide acceptable operations at these intersections. However, at the Deming Drive intersection a roundabout would provide traffic calming advantages and is, therefore, recommended.

Multimodal improvements should include continuous sidewalks or pedestrian friendly paths on at least one side of the roadway, as well as crosswalks at all study intersections. Bike lanes are recommended to be provided in both northbound and southbound directions along Walterscheid Boulevard.

# APPENDIX A. METHODS & ASSUMPTIONS DOCUMENT

## **MEMORANDUM**

**TO:** Chris Yaney

FROM: Charles Buck

**DATE:** April 27, 2021

**SUBJECT:** Methods and Assumptions – Traffic Engineering (Draft)

Walterscheid Boulevard Reconstruction Plan

FHU Reference No. 121011-01

This brief memorandum identifies the methods and assumptions for traffic engineering analysis in support of design efforts for the Walterscheid Boulevard (Blvd) Reconstruction Plan. The traffic analyses will be used to develop and refine potential improvement concepts for the proposed reconstruction. A preliminary traffic study will be prepared to support and inform the design efforts.

#### Study Area

The study area will be limited to the following intersections along Walterscheid Blvd:

- E College Drive
- W Prosser Road
- W Allison Road
- W Jefferson Road
- W Fox Farm Road
- Deming Drive

#### Traffic Volume Projections

Traffic volumes were recorded on March 8<sup>th</sup> and 9<sup>th</sup>, 2021 for the intersections of Walterscheid Blvd with W Prosser Road and E College Drive. Traffic volumes were recorded on February 22<sup>nd</sup> and 23<sup>rd</sup>, 2021 for the following intersections along Walterscheid Blvd:

- W Jefferson Road
- Deming Drive
- W Fox Farm Road
- Allison Road

The existing traffic volumes will establish a baseline for evaluation of future conditions. 2045 projections will be based on the Cheyenne MPO's regional travel demand model and vehicle trip estimates to be generated by known area developments.

#### Traffic Operations

Operational analyses will be conducted for existing and year 2045 conditions based on procedures documented in the *Highway Capacity Manual* (HCM) 6<sup>th</sup> Edition (Transportation Research Board, 2016). The 6<sup>th</sup> Edition HCM provides methods for multi-modal evaluation. Where appropriate, the following chapters of the HCM will be used to analyze specific operational conditions:

April 27, 2021 Chris Yaney Methods and Assumptions Page 2

- Chapter 19 Signalized Intersections
- Chapter 20 Two-Way Stop Controlled Intersections
- Chapter 22 Roundabouts

Highway Capacity Software (HCS) and Synchro will be used to develop basic lane requirements and geometric configurations. HCM  $6^{th}$  Edition analysis procedures require the use of certain parameters, summarized in **Table 1.** 

Table I. HCM Analysis Parameters

			Traffic Paramet	er

April 27, 2021 Chris Yaney Methods and Assumptions Page 3

Existing signalized intersection LOS analyses will utilize signal timing plans as provided by the City and MPO.

## **Measures of Effectiveness**

The measures of effectiveness (MOE) for this effort will include the following:

- Intersection operations use Level of Service (LOS) per HCM as calculated by Synchro. Potential roundabout alternatives will also be analyzed using Rodel.
- Multi-modal LOS (transit, bicycle, and pedestrian) use HCM 6<sup>th</sup> Edition methods.
- The primary mobility goal is LOS D or better for intersection operations. LOS C is the goal for all multi-modal operations.

#### **Documentation**

A preliminary Traffic Analysis Technical Memorandum will be prepared to document conceptual-level alternatives and results. Following review and comment by MPO and City staff, the traffic analyses and documentation will be refined to identify a preferred alternative for design.

## APPENDIX C. SPEED DATA

ADT: 4,408

#### MH Corbin Traffic Analyzer Study Computer Generated Summary Report City: Cheyenne Street: Walterscheid Blvd

Street: Walterscheid Blvd Location: South of Allison Rd

A study of vehicle traffic was conducted with the device having serial number 404091. The study was done in the Northbound lane at Walterscheid Blvd in Cheyenne, Wy in Laramie county. The study began on 03/08/2021 at 12:00 PM and concluded on 03/09/2021 at 12:00 PM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 2,099 vehicles passed through the location with a peak volume of 74 on 03/08/2021 at [03:30 PM-03:45 PM] and a minimum volume of 0 on 03/09/2021 at [12:00 AM-12:15 AM]. The AADT count for this study was 2,099.

#### SPEED

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 35 - 40 MPH range or lower. The average speed for all classifed vehicles was 37 MPH with 58.36% vehicles exceeding the posted speed of 35 MPH. 3.04% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 35MPH and the 85th percentile was 44.25 MPH.

#### **HEADWAY**

During the peak traffic period, on 03/08/2021 at [03:30 PM-03:45 PM] the average headway between vehicles was 12 seconds. During the slowest traffic period, on 03/09/2021 at [12:00 AM-12:15 AM] the average headway between vehicles was 900 seconds.

#### **WEATHER**

The roadway surface temperature over the period of the study varied between 32.00 and 93.00 degrees F.

03/09/2021 02:52 PM Page: 1

#### MH Corbin Traffic Analyzer Study Computer Generated Summary Report City: Chevenne

Street: Walterscheid Blvd Location: South of Allison Rd

A study of vehicle traffic was conducted with the device having serial number 404061. The study was done in the Southbound lane at Walterscheid Blvd in Cheyenne, Wy in Laramie county. The study began on 03/08/2021 at 12:00 PM and concluded on 03/09/2021 at 12:00 PM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 2,309 vehicles passed through the location with a peak volume of 82 on 03/08/2021 at [05:15 PM-05:30 PM] and a minimum volume of 0 on 03/09/2021 at [02:00 AM-02:15 AM]. The AADT count for this study was 2,309.

#### **SPEED**

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 30 - 35 MPH range or lower. The average speed for all classifed vehicles was 35 MPH with 40.88% vehicles exceeding the posted speed of 35 MPH. 1.28% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 30MPH and the 85th percentile was 39.59 MPH.

#### **HEADWAY**

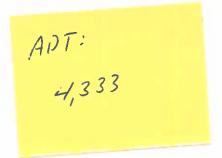

During the peak traffic period, on 03/08/2021 at [05:15 PM-05:30 PM] the average headway between vehicles was 10.843 seconds. During the slowest traffic period, on 03/09/2021 at [02:00 AM-02:15 AM] the average headway between vehicles was 900 seconds.

#### **WEATHER**

The roadway surface temperature over the period of the study varied between 34.00 and 90.00 degrees F.

Street: Walterscheid Blvd Location: South of Jefferson Rd

A study of vehicle traffic was conducted with the device having serial number 404022. The study was done in the Northbound lane at Walterscheid Blvd in Cheyenne, Wy in Laramie county. The study began on 02/22/2021 at 12:00 PM and concluded on 02/23/2021 at 12:00 PM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 2,017 vehicles passed through the location with a peak volume of 91 on 02/22/2021 at [02:45 PM-03:00 PM] and a minimum volume of 0 on 02/23/2021 at [12:45 AM-01:00 AM]. The AADT count for this study was 2,017.

#### SPEED

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 30 - 35 MPH range or lower. The average speed for all classifed vehicles was 36 MPH with 45.09% vehicles exceeding the posted speed of 35 MPH. 4.27% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 30MPH and the 85th percentile was 39.60 MPH.

#### **HEADWAY**

During the peak traffic period, on 02/22/2021 at [02:45 PM-03:00 PM] the average headway between vehicles was 9.783 seconds. During the slowest traffic period, on 02/23/2021 at [12:45 AM-01:00 AM] the average headway between vehicles was 900 seconds.

#### **WEATHER**

The roadway surface temperature over the period of the study varied between 32.00 and 64.00 degrees F.

#### MH Corbin Traffic Analyzer Study Computer Generated Summary Report City: Cheyenne

Street: Walterscheid Blvd Location: South of Jefferson Rd

A study of vehicle traffic was conducted with the device having serial number 404055. The study was done in the Southbound lane at Walterscheid Blvd in Cheyenne, Wy in Laramie county. The study began on 02/22/2021 at 12:00 PM and concluded on 02/23/2021 at 12:00 PM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 2,316 vehicles passed through the location with a peak volume of 85 on 02/23/2021 at [07:30 AM-07:45 AM] and a minimum volume of 0 on 02/23/2021 at [12:45 AM-01:00 AM]. The AADT count for this study was 2,316.

#### **SPEED**

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 35 - 40 MPH range or lower. The average speed for all classifed vehicles was 40 MPH with 84.33% vehicles exceeding the posted speed of 35 MPH. 1.92% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 35MPH and the 85th percentile was 45.11 MPH.

Intersection Summary												
HCM 6th Ctrl Delay			31.4									
HCM 6th LOS			С									

User approved pedestrian interval to be less than phase max green.

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: US HCM 6.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula. Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: US HCM 6.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula. Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: US HCM 6.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula. Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: US HCM 6.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula. Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: US HCM 6.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula. Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Roundabout LOS Method: Same as Sign Control.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).

Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).

Roundabout Capacity Model: US HCM 6.

Delay Model: HCM Delay Formula (Geometric Delay is not included).

Queue Model: HCM Queue Formula. Gap-Acceptance Capacity: Traditional M1.

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

## Walterscheid Boulevard Reconstruction Plan

Storm Drainage Study

## Final Walterscheid Corridor Storm Drainage Study

## **Prepared for:**

BenchMark Engineers, PC 1920 Thomes Avenue, Suite 320 Cheyenne, Wyoming 82001

September 2, 2022

September 9, 2022

Ms. Erin Gates, PE Project Manager BenchMark Engineers, PC 1920 Thomes Avenue, Suite 320 Cheyenne, WY 82001

RE: Final Drainage Study for the Walterscheid Corridor

Dear Erin:

GLM Design Group, LLC is pleased to submit the final drainage study for the Walterscheid Boulevard Reconstruction Plan. The final study provides a conceptual drainage plan for the Walterscheid corridor and contributing drainage basins. We have also evaluated downstream discharge points for both the existing and proposed conditions.

The intent of this report is to provide a practical direction stormwater conveyance for the Walterscheid corridor along with a discussion of constraints and potential downstream impacts.

If you should have any questions or comments as you review this report, please feel free to contact me atyour convenience.

Sincerely,

Gene L. MacDonald, PE Managing Principal

An Marchael

**GLM Design Group, LLC**

## I. General Location and Description

#### A. Location

Storm drainage has been an issue within the Walterscheid Blvd. corridor due, in large measure, to a lack of good conveyance paths to Allison Draw. Older residential neighborhoods to the east of Harmony Meadows have been impacted by poor drainage for decades, with the problem being exacerbated by an increase in storm drainage from Harmony Meadows.

8/14/2021 Laramie County, Wyoming, MapServer

Figure 1. Vicinity Map

#### **Description of Project Corridor**

Currently, borrow ditches in the County section of the project area are not well maintained and do not have effective discharge points when they are flowing. Effective conveyance of stormwater runoff to the receiving Allison Draw drainage is problematic for the existing conditions. The conceptual design efforts by default, have included an evaluation of effective conveyance routes to Allison Draw as appropriate for the proposed reconstruction of the corridor.

Over the last two decades, the developments of Harmony Meadows located on the west side of the corridor and Gateway South located on the east side have had a significant impact on storm drainage. Harmony Meadows has exacerbated poor conveyance conditions to Allison Draw while the Gateway South development constructed a new conveyance element to Allison Draw to discharge its stormwater runoff. The Gateway South developer coordinated with the County Public Works Director at the time of site design to ensure that an effective conveyance route was also built to convey flow into Allison Draw. The Harmony Meadows developer relied on an existing drainage easement which lacked capacity for the additional developed discharge.

The following is a summary of the existing conditions:

*Grades* – In general, the corridor drains to the south along moderate to shallow to moderate grades. Much of the corridor consists of borrow ditches that are not well maintained.

Soil Type – in general, NRCS hydrologic soil group B is the predominant soil condition. The project area generally consists of Allison Draw loamy sands with a ridge line of sandstone running along the northern perimeter. Bedrock is generally located 5' to 8' below the channel bottom of Allison Draw.

Storm Drainage Facilities — The adjacent Gateway South development has an extensive storm drainage system designed to address on-site and contributing off-site storm water drainage. The system consists of multiple detention facilities and storm sewers with an outfall system to Allison Draw. There is a WYDOT storm sewer system in Allison Road intercepting drainage from the west and from a portion of the Walterscheid Blvd. corridor that connects into the Gateway South outfall system. Further to the south of the corridor, there is an undersized and il-maintained county storm sewer that conveys drainage from the adjacent Harmony Meadows. This system requires an upgrade to be an effective conveyance element.

## B. Description of Overall Project Improvements

The project corridor is proposed to be updated to a minor arterial between Deming Drive and College Drive including a conversion to a complete streets design. Additional curb and gutter are being proposed as well with limited storm drain to connect into the WYDOT Allison Road system. An improved outfall to Allison Draw is also proposed for the lower end of the corridor to improve storm drainage conveyance between Allison Road and College Drive. There is an existing Greenway path on the east side of the corridor adjacent to the Gateway South development. Additional sidewalk and landscaped ROW is recommended with the planned updates to the corridor.

### II. Drainage Basins and Sub-Basins

#### A. Major Basin Description

The project area is in the Allison Draw Drainage Basin. Allison Draw is a tributary of Crow Creek and has an upstream drainage area of approximately 18.0 square miles. The historic low-flow channel in this area of the basin has been realigned and improved by the County over recent decades. There is adequate capacity within the Allison Draw channel at this location for stormwater discharge from the project corridor and adjacent sub-basins. The existing constraint revolves around insufficient conveyance capacities for outfalls to Allison Draw. The SWMM, Version 5.1.015 software model was used to model both the existing and proposed conditions for the Walterscheid corridor and adjacent drainage sub-basins.

#### B. Pre-Project Drainage Patterns (see attached Existing Conditions Drainage Plan Map)

The Allison Draw Flood Control improvements by the County have improved flood conveyance through this reach of Allison Draw. There remains significant "bottle necks" downstream that do impact conveyance capacities but outfall discharge from the proposed corridor improvements should not exacerbate downstream conditions.

Runoff from adjacent sub-basins and an estimate of existing conditions for the various design points from the SWMM analysis are shown with Table 1. Design point M-1 is the main outfall into Allison Draw for the entire corridor and adjacent sub-basins; Design point M-2 is the confluence of north and south conveyance elements located just upstream of the Draw, east of the corridor and Harmony Meadows; Design point M-4 is the outfall for Harmony Meadows; Design point Mh4 is the confluence with the Gateway South outfall; Design point A-1 is located at the north end of the Gateway South outfall ditch at Allison Road; Design Point B-3 is located at the north end of the Tri-State detention storage adjacent to the Walterscheid ROW; and Design Point LP-Walt is located at the southern end of the corridor at College Drive.

Table 1. Existing Conditions Runoff Summary								
Catchment / Point	Tributary Area (Acres)	Basin Number	Q10 (cfs)	Q25 (cfs)	Q50 (cfs)	Q100 Design (cfs)		
M-1	216.7	Allison Draw Outfall			157.86	191.40		
M-2	194.6	Upstream Confluence	68.08	97.09	128.07	193.55		
M-4	6.44	Harmony Meadows Outfall	21.11	30.66	39.77	52.95		
Mh4	46.12	Allison Road	39.86	50.80	72.41	115.79		
A-1	112.3	North Ditch	39.86	51.45	75.92	121.25		
B-3	28.6	North Offsite, Basin 1	21.90	32.93	45.52	59.36		
LP-Walt	By-Pass	College Drive By- Pass	0.00	0.00	0.00	7.56		

Discharges for the 4-hr. storm are about 65% that of the 2-hr. runoff totals. The existing conditions SWMM model shows drainage issues for the Harmony Meadows outfall to Allison Draw; inflow into the Tri-State detention storage from an off-site basin; Excess discharge from the Tri-State storage into Gateway South, and additional issues at the northern end of Wyo-Fresh from adjacent off-site drainage.

## III. Drainage Design Criteria

#### A. Guidelines for Corridor Update

Our design approach meets the proposed design standards as set forth for the Walterscheid corridor update by the BenchMark Engineer's project team. We are basing our proposed conditions model on

an existing 80' ROW with a 48' back-of-curb to back-of-curb roadway section. The proposed model incorporates curb and gutter along with limited storm sewer in the corridor.

#### B. Development of Design Models

We are incorporating the EPA SWMM, Version 5.1.015 modeling software to model both the existing and proposed conditions for the corridor and adjacent sub-basins.

#### C. Hydrological Criteria

Development (Type): Infrastructure

Minor Storm Design: 10-Year

Major Storm Design: 100-Year

The proposed new conveyance elements, including water quality allowances and downstream mitigation, will be designed using the US EPA Stormwater Management Model (SWMM, ver. 5.1.015) software along with UD-Culvert and HEC-RAS where appropriate.

- HEC-RAS will be incorporated if needed to model the Gateway South open channel and the Harmony Meadows County conveyance element.
- UD-Culvert will be incorporated to develop rating curves for an improved Harmony Meadows conveyance element for use in the EPA SWMM model.
- EPA SWMM, Version 5.0.15 will be used to evaluate alternative culvert options and storage volumes.

EPA SWMM sub-catchment rainfall-to-runoff algorithms. Dynamic wave routing within the SWMM model was used to address interconnections and interactions between all collection, conveyance, storage, and regulatory elements.

## IV. Drainage Facility Design

#### A. Preliminary Drainage Plan Overview

The design approach for selecting cost-efficient storm drainage facilities for the proposed conditions was to incorporate, to the extent possible, existing infrastructure. The Gateway South outfall system was purposely over designed to accept future storm water runoff from Allison Road. The existing WYDOT Allison Road storm sewer connects to the Gateway South outfall system to Allison Draw. Our SWMM modeling indicates that for proposed corridor conditions, we can intercept additional stormwater into the Allison Road system and efficiently convey stormwater runoff from the corridor, upstream of Allison Road, into the Allison Road storm sewer system. In conjunction with an improvement to the Harmony Meadows outfall Conveyance, stormwater runoff can then be effectively conveyed through the updated corridor and into Allison Draw. Our conceptual plan is for a 100-year design.

Table 2. Proposed Conditions Runoff Summary								
Catchment / Point	Tributary Area (Acres)	Basin Number	Q10 (cfs)	Q25 (cfs)	Q50 (cfs)	Q100 (cfs)		
M-1	216.7	Allison Draw Outfall		157.86	175.85	225.91		
M-2	194.6	Confluence	104.36	138.97	179.07	226.47		
M-4	6.44	Harmony Meadows Outfall	25.75	34.29	43.75	56.92		
Mh4	46.12	Allison Road	65.59	85.71	107.54	139.56		
A-1	112.3	North Ditch	67.97	90.48	116.06	139.56		
B-3	28.6	North Offsite, Basin 1	26.90	34.33	38.01	38.3		
LP-Walt	By-Pass	College Drive By- Pass	6.35	8.17	10.05	15.09		

#### B. Detention System Design

The existing detention systems for the Gateway South development and the Tri-State facility will benefit from our proposed improvements for the corridor. The maximum volume of storage occurring within the Gateway facility will be reduced from the 3.74 ac-ft for existing conditions to 3.5 ac-ft for improved conditions. The maximum volume of storage occurring within the Tri-State facility will also be reduced from the 1.74 ac-ft for the existing conditions to 1.49 ac-ft for improved conditions. We are recommending that additional consideration be given to improving the drainage conditions for the adjacent Wyo-Fresh property as a part of the corridor improvements. Offsite flow coming onto the Wyo-Fresh property can be directed into the proposed corridor storm sewer at the upstream end of the property; and offsite flow coming onto the property at the south end can be more efficiently directed into the Tri-State facility.

#### C. Spillway Design

The Gateway South spillway will benefit from less storage occurring in the facility. There will be added freeboard for the Gateway South facility with the proposed corridor improvements.

#### D. Impacts on Downstream Facilities.

As previously outlined, the design intent is to mitigate for an increase in the historic runoff patterns for the full range of return periods. There will be slight increases in discharge to Allison Draw with the proposed corridor improvements, but this will be offset by the elimination of existing drainage issues within the corridor. The existing inefficient outfall to Allison Draw will be improved resulting in better conveyance of stormwater runoff to the receiving catchment. Downstream impacts within Allison Draw are expected to be negligible and should not exacerbate the existing constraint downstream in the channel.

### V. Sediment/Erosion Control

The site falls under the requirements the Wyoming Discharge Pollutant Prevention Discharge (WYPDES) program for a large construction site (> 5 acres). A formal state notice of coverage is not required but the site will require a Storm Water Pollution Prevention Plan (SWPPP) developed to follow the requirements of the general state permit. The SWPPP will include more detailed information on sediment and erosion control items for this project. A short summary of the recommended temporary BMPs for the site to control on-site erosion and prevent sediment from traveling off-site during construction include:

- Silt Fence a woven synthetic fabric that filters runoff. The silt fence is a temporary barrier that is placed at the base of a disturbed area. This feature is proposed for the west, south, and east sides of the site.
- Vehicle Tracking Control a stabilized stone pad or prefabricated metal (rattle mat) located
  at points of ingress and egress on a construction site. The pad is designed to reduce the
  amount of mud transported onto public roads by construction traffic.
- Inlet Protection acts as a sediment filter. It is a temporary BMP and requires proper installation and regular maintenance to ensure their performance.
- The proposed detention facility would be available for temporary sediment containment if excavated with the initial grading on the site.

The contractor should store all construction materials and equipment and provide maintenance and fueling of equipment in confined areas on-site from which runoff will be contained and filtered. The temporary Best Management Practices (BMP's) are required to be inspected by the contractor at a minimum of once every two weeks and after each significant storm event.

Construction activities including excavation often increase compaction which reduces both soil hydraulic conductivity and porosity which result in standing water. Landscape planting in the base of the detention ponds should specify a tolerance for highly saturated soil conditions. As mentioned earlier in the report, permitting through state and federal agencies will be discussed in the final report with recommendations as to proceeding with design and construction.

#### VI. Conclusions

#### A. Compliance with Standards

Storm drainage calculations have followed the guidelines provided by the applicable sections of the City of Cheyenne Unified Development Code. The design approach is fully compliant with the restrictions and constraints of the City and County.

#### B. Drainage Plan

The drainage system is designed to more efficiently convey stormwater runoff from the corridor and contributing offsite basins to the receiving catchment, Allison Draw. As shown in Appendix B, we are proposing storm sewer upstream (north) of the greenway underpass to convey stormwater more efficiently into the existing Tri-State storage facility. This facility takes stormwater runoff from the west borrow ditch currently. We are proposing to intercept flow in the curb and gutter with Type AA

inlets on both the east and west side of the road and convey this discharge into the Tri-State facility. For less frequent events, there will be by-pass flow that will be intercepted immediately downstream of the greenway crossing by Type AAA inlets on both sides of the street. We are proposing a 24-inch trunkline for 400-feet connected to a 30-inch trunkline for an additional 300-feet to the intersection with W. Allison Rd. We are proposing four sets of Type AA inlets and two sets of Type AAA inlets to be evenly placed on either side of the road and connected to the 30-inch storm sewer for intercepting street runoff.

Stormwater runoff from the proposed Walterscheid system will be combined with runoff from an adjoining subcatchment area to the west and conveyed into the recently constructed WYDOT system in W. Allison Road. The WYDOT system connects to the existing Gateway South Outfall system in W. Allison Road. and is then conveyed to Allison Draw. Stormwater runoff from the Tri-State storage facility and from the Gateway South development are jointly conveyed through this same system.

We are further proposing new 24-inch storm sewer south of Dot Ray Place. to convey street flow to a secondary outfall alignment to Allison Draw. We are recommending three new Type A inlets along with slotted drain to intercept street drainage upstream of W. Prosser Road. There will remain runoff that will flow to the existing WYDOT storm sewer in W. College Drive. from W. Prosser Road. south within the Walterscheid corridor. This is primarily street runoff with adequate curb and gutter capacity. The secondary outfall alignment is an existing system that will require maintenance and/or pipe replacement. Additionally, a drainage easement should be recorded for this alignment.

We have not included in our conceptual plan a drainage design for the proposed roundabout for the Fox Farm/Walterscheid Boulevard intersection because it is planned to be reconstructed well before the Walterscheid Boulevard corridor is reconstructed. At present, drainage from this intersection is directed in three directions – north, east, and south. We would ideally recommend that storm sewer convey this flow to the south, however, a storm sewer system would need to be in place to convey this flow. Complicating the matter further is the fact that the greenway tunnel at the Boys and Girls Club presents a conflict. Therefore we are using the Tri-State facility in our conceptual plan to intercept street runoff and runoff from adjacent Subcatchments to the west. There is potential to incorporate additional storage on the WyoFresh property for attenuation and conveyance of flow from a future Fox Farm Road/Walterscheid Boulevard roundabout. Short of that, our recommendation is to maintain the present drainage patterns while limiting the increase in peak discharges to the extent possible.

We have provided a cost-effective approach for re-configuring the conveyance elements for the corridor while maintaining the performance of existing storage for the Gateway South and Tri-State facilities. Conceptual construction details for the proposed storm sewer for the corridor along with our proposed improvements for the Harmony Meadows outfall system are included in Appendix B to this report.

### **APPENDIX B**

### **Conceptual Construction Details for the Walterscheid Corridor**

Conceptual Storm Sewer Plan

### Walterscheid Boulevard Reconstruction Plan

### Public Involvement Materials

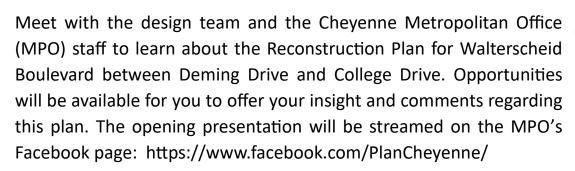

- First Public Meeting
- Second Public Meeting

You are invited to attend a Public Open House for the

### Walterscheid Boulevard Reconstruction Plan

Tuesday, May 25th from 5:30 pm to 7:00 pm at Rossman Elementary School (916 W. College Drive)

### Walterscheid Boulevard Plan

Design Team:

BenchMark ENGINEERS, PC

### Welcome

- Introductions
- Present the project
- Open House for the public to share their thoughts and insight
- Complete and return comment cards

### Project Team

- Cheyenne Metropolitan Planning Organization
- BenchMark Engineers
- Felsburg Holt & Ullevig
- GLM Design Group
- In partnership with:
  - City of Cheyenne
  - Laramie County

### Plan Goals

- Update to a Minor Arterial between Deming Drive and College Drive
  - Fox Farm intersection is not included
- Conversion to a Complete Street
- Create a plan to be used as a guide and template for future development
- Involve stakeholders, including the public, in our data collection and recommendations
- Be able to justify our recommendations

### 35% Design Plans

- Connect 2045 Master Transportation Plan calls for 5-lane Minor Arterial Roadway
- Consider changes to the horizontal and vertical alignments
- Intersection improvements
- Stormwater drainage improvements
- Utility upgrades
- Greenway and other pedestrian and bicycle movements

### Roadway Classifications

TABLE 4-8: STANDARD DESIG	IN TYPES	
Design Type	Context (Comprehensive Plan)	Applicability (Functional Class)
Principal Arterial	Commercial and Industrial Land Use areas, or connectors between commercial and industrial areas and residential areas.	Principal Arterial
Minor Arterial	Connectors between commercial and industrial areas and residential areas	Minor Arterial
Collector (A, B, C)	Connectors between arterials and local streets in commercial, residential and industrial areas.	Collector
Commercial / Industrial Street	Commercial and Industrial Land Use Areas	Local
Residential Street (A & B)	Urban Transition Residential Urban Neighborhoods Rural / Low-Density Neighborhoods	Local
Alley	Residential	Residential Service
Alley	Non-residential	Commercial Service

Table from UDC

Walterscheid is currently acting as a collector.

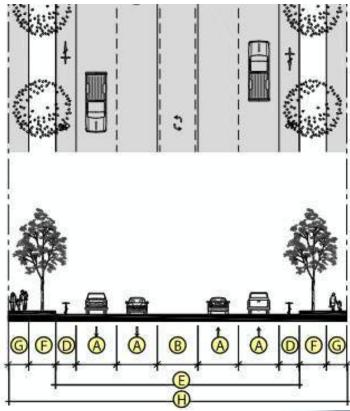

### Roadway Classifications

- Principal Arterial High speeds and long, uninterrupted travel
- Minor Arterial Slower speeds than principal arterial, often provides connections to principal arterials
- Major and Minor Collectors Collects traffic from local roads and distributes to arterials
- Local Street Provides access to land, little or no through traffic

### Minor Arterial Roadway Standards

- UDC has two standard options for a Minor Arterial Roadway
  - Provide regional continuity and accommodate moderate speeds and volumes
  - Traffic volumes
    - 7,500 18,000 for 2-lane
    - 15,000 32,000 for 4-lane
  - Speed Limits 35-40 MPH
  - Right-of-Way: 100'

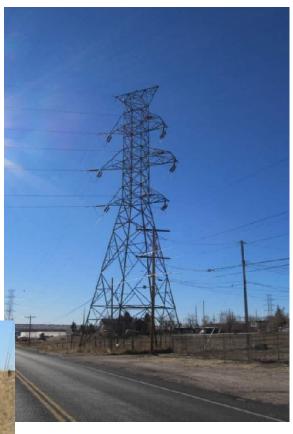

# Complete Streets and Multi-Modal Designs

- Balanced designs to accommodate all potential users of the street
  - Vehicles
  - Pedestrians
  - Bicyclists
- Consideration of transit services
- Critical for Walterscheid due to number of schools and facilities providing services to youth

### Physical Constraints

- 3 Bridges for I-80 that cross over the road
- 80' Right-of-Way at many locations
- Greenway Underpass south of Jefferson
- Utility conflicts (overhead and underground)

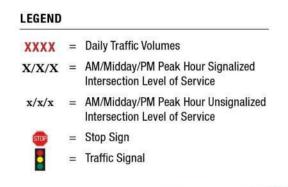

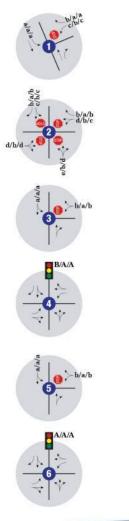

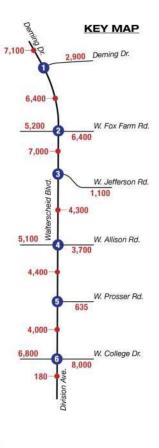

Walterscheid Boulevard Plan

### Existing Traffic Conditions

- Traffic Operations acceptable for all movements, except Fox Farm intersection
- Through traffic levels manageable for current two-lane section

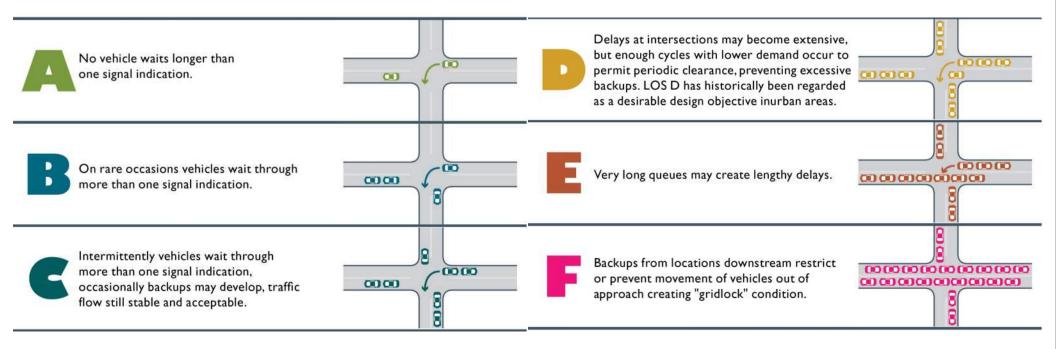

### Level of Service (LOS) at Intersections

### Travel Speeds

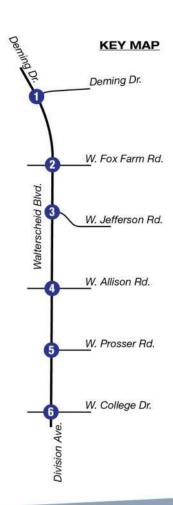

- Posted Speed varies from 30-35 mph – school zone excepted
- Travel speeds relative to posted increase northward, exceeding limit by 10+ mph northbound toward Deming Drive
- Speeding issues observed may require mitigation

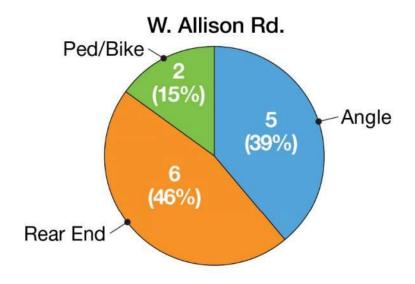

# Crash History

Intersection #	Cross Street	Total Crashes, 2016-2020
0	Deming Drive	1
2	Fox Farm Road	11 <b>*</b>
3	Jefferson Road	2
4	Allison Road	13
5	Prosser Road	1
6	College Drive	8

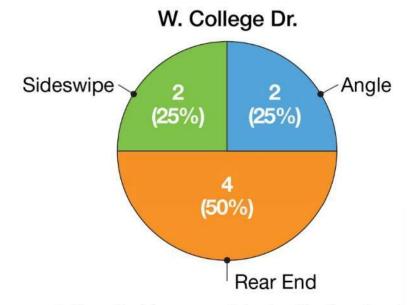

<sup>\*</sup> Excluded from detailed crash analysis due to separate ongoing study

### Crash Types at Higher Frequency Intersections

- Elevated angle crash pattern
- 2 reported ped/bike crashes (only ped/bike crashes reported on corridor)
- Limited sight distance looking south along Walterscheid may be contributing to crashes

- Rear-End type consistent with signalized intersection patterns
- Insufficient roadway striping may be contributing to sideswipe crashes

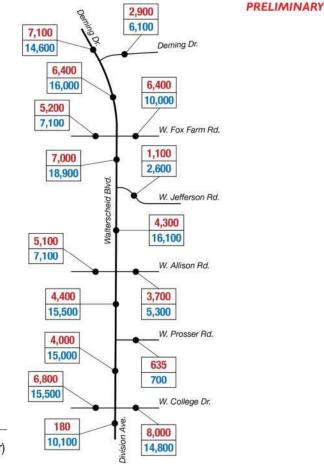

# Existing Multimodal Conditions

- Deficiencies include:
  - Inconsistent or missing sidewalk
  - Constrained travel space for bicyclists
  - Lack of bicycle signage

# Daily Traffic Volume Forecasts

- Aggressive Growth Anticipated, volumes tripling over existing at some locations
- Growth includes development along corridor and outside of study area

LEGEND

XXXX = Daily Traffic Volumes (Base Year)

XXXX = 2045 Daily Traffic Forecasts

MORTH

# Forecasted 2045 Conditions and Suggested Improvements

- As currently configured, the corridor will not provide adequate capacity for growth
- Potential improvements include added turn lanes, traffic control modifications and widening to provide additional through lanes

# LEGEND XXXX = Daily Traffic Volumes X/X/X = AM/Midday/PM Peak Hour Signalized Intersection Level of Service x/x/x = AM/Midday/PM Peak Hour Unsignalized Intersection Level of Service Stop Sign Traffic Signal

#### Intersection #1 Potential Improvements

- Additional auxiliary lanes
- Signalization
- Roundabou

# a all a land

#### Intersection #2 Potentia Improvements

- Additional auxiliary lanes - Future intersection control
- alternatives currently under review

### Intersection #3 Potential

- Additional auxiliary lanes
   Signalization
- NOTE: Subject to meeting warrant and signal spacing criteria

#### Intersection #4 Potentia Improvements

- Additional auxiliary lanes

#### Intersection #5 Potential Improvements

- None currently identified

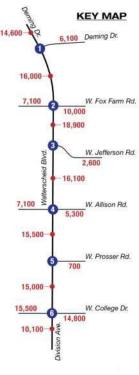

#### Intersection #6 Potential Improvements

- Additional auxiliary lanes

#### Potential Corridor Wide Improvements

- Additional through travel lanes
- Access management strategies

### The Plan

- We are creating a plan for the area for short-term and long-term improvements.
  - This plan will also serve as a template for new development and redevelopment
- Currently there is no schedule to finalize the design plans or funds for construction

# Moving Forward

- We need your insight as community members
  - What are your concerns?
  - What are your priorities?

# Thank you for your time!

Please view the display boards and complete a comment card.

# Welcome Public Open House Walterscheid Boulevard Plan

Project Goal: Determine the needs and create a plan for improvements along this roadway in the short-term and long-term for all users.

### **Project Basics:**

- 35% Design Level for corridor between Deming Drive and West College Drive.
- Recommendation from Connect 2045 Master Transportation Plan is to upgrade the road to 5-lane roadway.
- Intersection at Fox Farm not included (this is a separate project by the City of Cheyenne).
- Construction is not funded or scheduled at this time.

We need your input for the plan! Please sign-in and complete a comment card before you leave.

Thank you for attending.

# **Existing Conditions**in the Corridor

- Classified as a minor arterial, built more like a collector
- Two lanes for vehicles
- Some sidewalk, inconsistent
- Some curb and gutter
- Numerous overhead and buried utilities
- Three bridges cross over roadway at I-80
- Signalized intersections at Allison Road and College Drive
- Greenway underpass south of Jefferson Road
- Numerous schools and facilities serving young residents

### **Existing Physical Limitations**

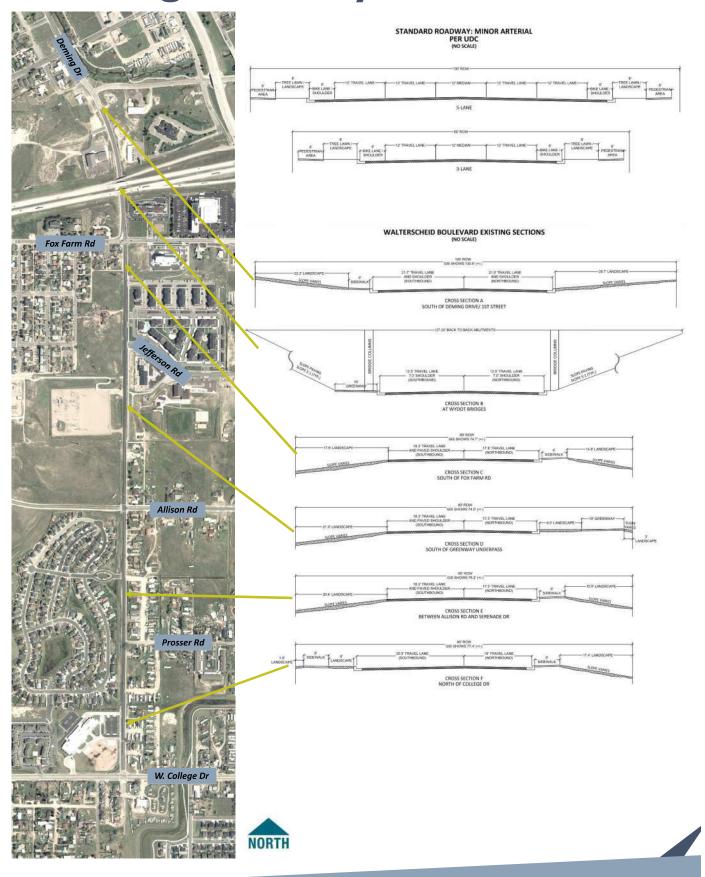

### **Existing Roadway Cross Sections**

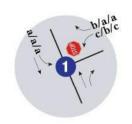

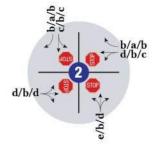

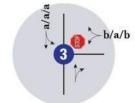

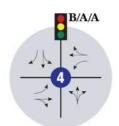

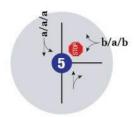

# Current Traffic Volumes and Operations

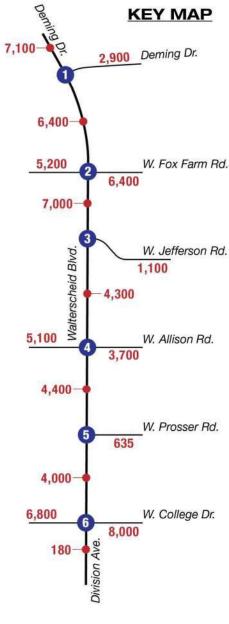

#### LEGEND

XXXX = Daily Traffic Volumes

X/X/X = AM/Midday/PM Peak Hour Signalized Intersection Level of Service

x/x/x = AM/Midday/PM Peak Hour Unsignalized Intersection Level of Service

= Stop Sign

= Traffic Signal

# Current Observed Traffic Speeds

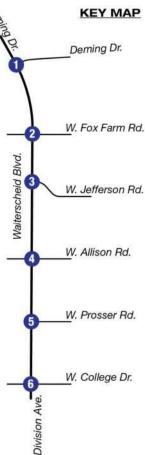

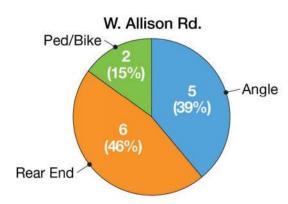

Reported Intersection Crashes 2016-2020

Intersection #	Cross Street	Total Crashes, 2016-2020
0	Deming Drive	1
2	Fox Farm Road	11*
3	Jefferson Road	2
4	Allison Road	13
5	Prosser Road	1
6	College Drive	8

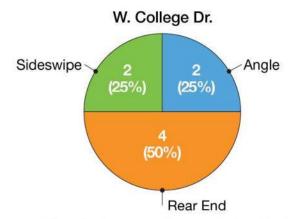

Excluded from detailed crash analysis due to separate ongoing study

### Crash Types at Higher Frequency Intersections

- Elevated angle crash pattern
- 2 reported ped/bike crashes (only ped/bike crashes reported on corridor)
- Limited sight distance looking south along Walterscheid may be contributing to crashes

- Rear-End type consistent with signalized intersection patterns
- Insufficient roadway striping may be contributing to sideswipe crashes

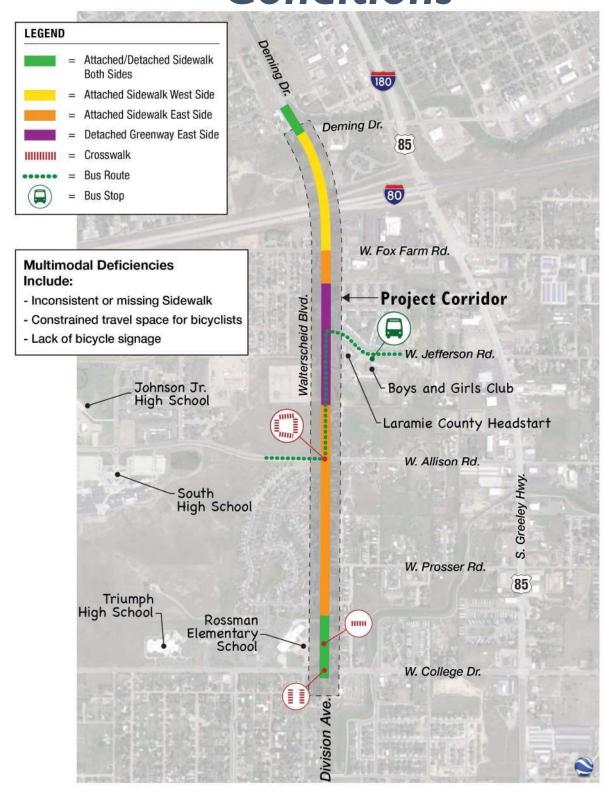

# Non-Motorized Travel Conditions

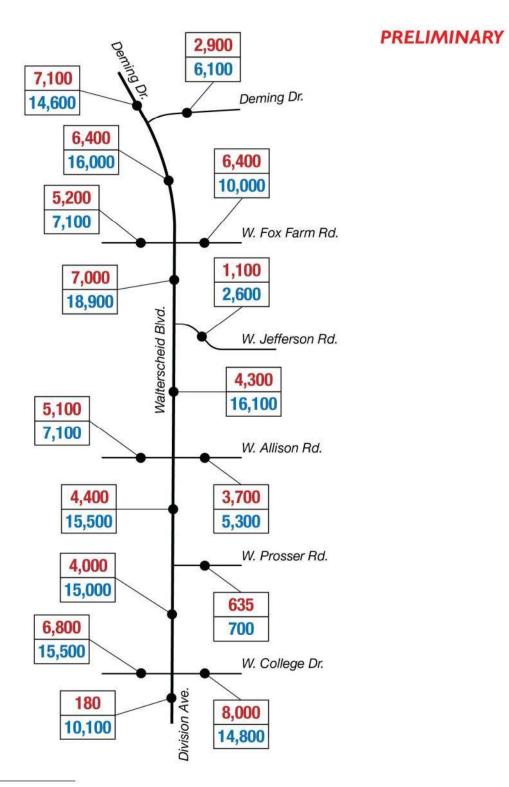

# **Daily Traffic Volume Forecasts**

#### **LEGEND**

XXXX =

Daily Traffic Volumes (Base Year)

XXXX

= 2045 Daily Traffic Forecasts

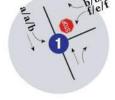

# Long Term Future Traffic Conditions and Potential Improvements Types

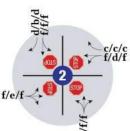

### Intersection #1 Potential Improvements

- Additional auxiliary lanes
- Signalization
- Roundabout

### Intersection #2 Potential Improvements

- Additional auxiliary lanes
- Future intersection control alternatives currently under review

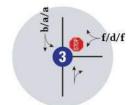

### Intersection #3 Potential Improvements

- Additional auxiliary lanes
- Signalization<sup>®</sup>

#### NOTE:

Subject to meeting warrants and signal spacing criteria

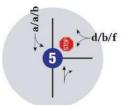

### Intersection #4 Potential Improvements

- Additional auxiliary lanes

### Intersection #5 Potential Improvements

- None currently identified

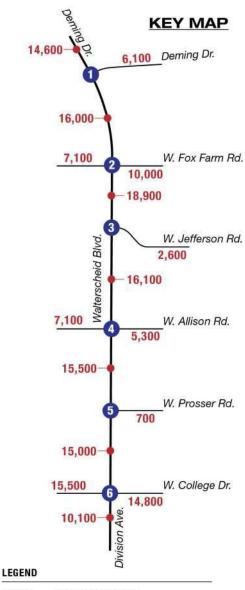

### Intersection #6 Potential Improvements

- Additional auxiliary lanes

### Potential Corridor Wide Improvements

- Additional through travel lanes
- Access management strategies

XXXX = Daily Traffic Volumes

X/X/X = AM/Midday/PM Peak Hour Signalized Intersection Level of Service

x/x/x = AM/Midday/PM Peak Hour Unsignalized Intersection Level of Service

= Stop Sign

= Traffic Signal

### **Opportunities for Improvements**

- Traffic Safety
  - Speed Mitigation
  - Intersection Improvements

### Traffic Operations / Level of Service

- Additional Turn Lanes at Intersections
- Changes to Intersection Traffic Control
- Additional Travel Lanes

### Multimodal / Complete Streets

- Greenway Connections
- Sidewalk Enhancements
- On-Street Bicycle Accommodations

### Roadway Design

• Update to Minor Arterial Standards

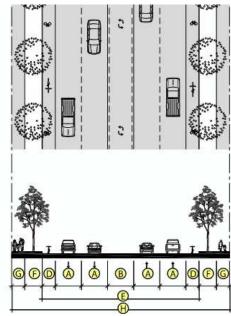

### Infrastructure

• Stormwater Drainage Enhancements

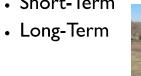

Coordinated Utility Improvements

Short-Term

GEOME	TRIC AND URBAN DESIGN STA	INDARDS
		Minor Arterial
A	Number of Lanes (Width)	2-4 (12')
B	Median Type (Width)	Painted (12') – may be raised if 4-lane
0	Parking	none
0	Bicycle Lane / Shoulder	6′
(E)	Roadway Width (BC-BC)	72' minimum (4-lane w/ median) 48' minimum (2-lane w/ median)
(F)	Tree Lawn / Landscape	8' minimum
G	Pedestrian Area	6' minimum
$oldsymbol{\Theta}$	Right-of-Way Width*	100' minimum

# You are invited to attend a Public Open House for the Walterscheid Boulevard Reconstruction Plan

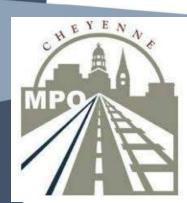

Tuesday, March 22, 2022 5:30 pm to 7:00 pm Rossman Elementary School 916 W. College Drive

Meet with the design team and the Cheyenne Metropolitan Organization (MPO) staff to learn about the progress on the Reconstruction Plan for Walterscheid Boulevard between Deming Drive and College Drive. Opportunities will be available for comments regarding this project.

# Walterscheid Boulevard Plan

Design Team:

BenchMark ENGINEERS, PC

## Welcome

- Introductions
- Present project update
- Open House for the public to share their thoughts and insight
- Complete and return comment sheet

## Project Team

- Cheyenne Metropolitan Planning Organization
- BenchMark Engineers
- Felsburg Holt & Ullevig
- GLM Design Group
- In partnership with:
  - City of Cheyenne
  - Laramie County
  - Wyoming Department of Transportation

## Plan Goals

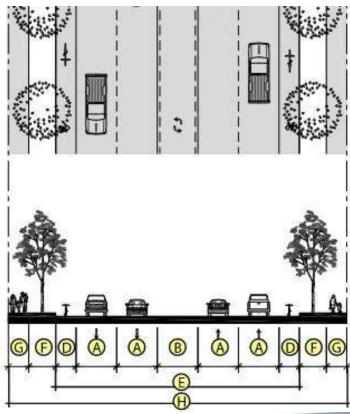

- Update to a Minor Arterial between Deming Drive and College Drive
  - Fox Farm intersection is now included
- Conversion to a Complete Street
- Create a plan to be used as a guide and template for future development
- Involve stakeholders with data collection and recommendations
- Be able to justify our recommendations

## 35% Design Plans

- Connect 2045 Transportation Update plan calls for 5-lane Minor Arterial Roadway
- Consider changes to the horizontal and vertical alignments
- Intersection improvements
- Stormwater drainage improvements
- Utility upgrades
- Greenway and other pedestrian and bicycle movements

## Minor Arterial Roadway Standards

- UDC has two standard options for a Minor Arterial Roadway
  - Provide regional continuity and accommodate moderate speeds and volumes
  - Traffic volumes
    - 7,500 18,000 for 3-lane (with center turn)
    - 15,000 32,000 for 5-lane (with center turn)
  - Speed Limits 35-40 MPH
  - Right-of-Way: 100'

## Complete Streets and Multi-Modal Designs

- Balanced designs to accommodate all potential users of the street
  - Vehicles
  - Pedestrians
  - Bicyclists
- Consideration of transit services
- Critical for Walterscheid due to number of schools and facilities providing services to youth

## Physical Constraints

- 80' Right-of-Way at many locations
- 3 Bridges for I-80 that cross over the road
- Greenway Underpass south of Jefferson
- Utility conflicts (overhead and underground)

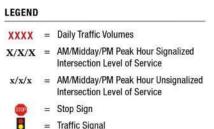

Walterscheid Boulevard Plan

## Traffic Operations and Safety Analysis

- Existing Conditions at intersections
- Travel Speeds
- Crash History, including types and frequency
- Existing multimodal conditions
- Daily Traffic Forecasted Volumes

# Forecasted 2045 Conditions and Suggested Improvements

- As currently configured, the corridor will not provide adequate capacity for growth
- Potential improvements include added turn lanes, traffic control modifications and widening to provide additional through lanes

#### Intersection #1 Potential Improvements

- Additional auxiliary lanes
- Signalization
- Roundabout

## and the state of t

#### Intersection #2 Potentia Improvements

- Additional auxiliary lanes - Future intersection control
- alternatives currently under review

#### Intersection #3 Potential

- Additional auxiliary lanes
   Signalization
- Subject to meeting warrants and signal spacing criteria

#### Intersection #4 Potentia Improvements

- Additional auxiliary lanes

#### Intersection #5 Potential Improvements

- None currently identified

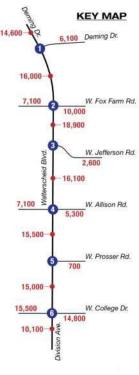

#### Intersection #6 Potential Improvements

- Additional auxiliary lanes

#### Potential Corridor Wide Improvements

- Additional through travel lanes
- Access management strategies

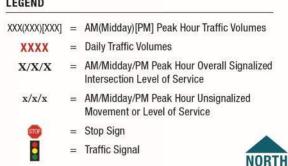

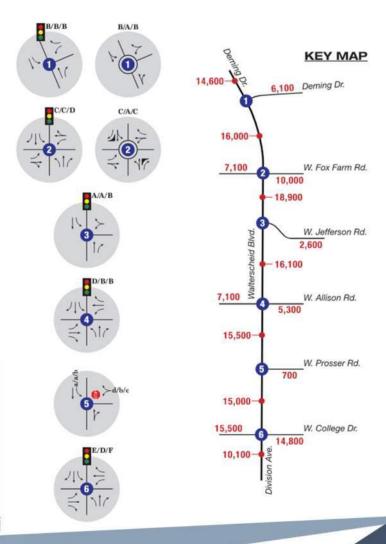

## Alternatives Analysis

- Evaluating roundabout options at Deming and Fox Farm intersections
- Signalization of Jefferson intersection likely

 Most intersections need exclusive right turn lanes plus center left turn lane

## Stormwater Drainage Analysis

- Fox Farm to College Drive
  - Excluded the area north of Fox Farm
- Area is in the Allison Draw Drainage Basin
  - Adequate capacity in the Allison Draw channel
  - Need to address conveying the flows to the channel

## The Plan

- Moving forward with 3-lane minor arterial in the 80-foot right-of-way
- Intersection Improvements
- Greenway and Sidewalks
- Drainage Improvements

## The Plan - Roadway

- Moving forward with 3-lane minor arterial in the 80-foot right-of-way
  - Based on the UCD standard
  - 2-lane under the I-80 bridges
  - No parking on the street
  - Type B (rollover) curb at residential access
- Verify and obtain additional rights of way with new developments and re-developments
- Recommending street lighting

## The Plan - Intersections

- Intersection Improvements
  - Auxiliary turn lanes
  - Signalization or roundabout at Fox Farm
  - Consider roundabout at Deming

## The Plan – Pedestrians and Bicyclists

- Greenway
  - West side between Deming and Fox Farm
  - East side between Fox Farm and College
- Sidewalk
  - West side from Fox Farm to Rossman Elementary
- No pedestrian facilities on east side from Deming to Fox Farm
- Pedestrian Protection at the bridges
- On-Street bike lanes

## The Plan – Stormwater Drainage

- Install approximately 1,000 LF of 36-inch pipe
- Inlets at key locations
- Replace culvert near Serenade and Dot Ray and extend the culvert to the Allison Channel

## The Plan - Implementation

- We are creating a plan for the area for short-term and long-term improvements.
  - This plan will also serve as a template for new development and redevelopment
- Currently there is no schedule to finalize the design plans or funds for construction for the full roadway
  - The City intends to move forward with improvements to the Fox Farm intersection, separately, this is funded

## The Plan – Phasing of Improvements

- Identify improvements that can be completed near-term
  - Pavement markings
  - Sidewalks
  - Intersections
- Intersection Improvements
- Template for development and re-development
- Obtain rights-of-way for the future
- Full build-out of remaining items

## Finalizing the Plan

- We need your insight as community members
  - What do you like about the plan?
  - What are your concerns with the plan?
  - Are there items we missed?

## Thank you for your time!

Please view the display boards and complete a comment sheet.

# Walterscheid Boulevard Plan

Meeting Goal: Update you on the progress of the project.

Project Goal: Determine the needs and create a plan for improvements along this roadway in the short-term and long-term for all users.

#### Project Basics:

- 35% Design Level for corridor between Deming Drive and West College Drive.
- Complete Street improvements to the roadway, intersections, multimodal uses, and stormwater drainage.
- Construction is not funded or scheduled at this time.

Please sign-in and complete a comment sheet before you leave. Thank you for attending.

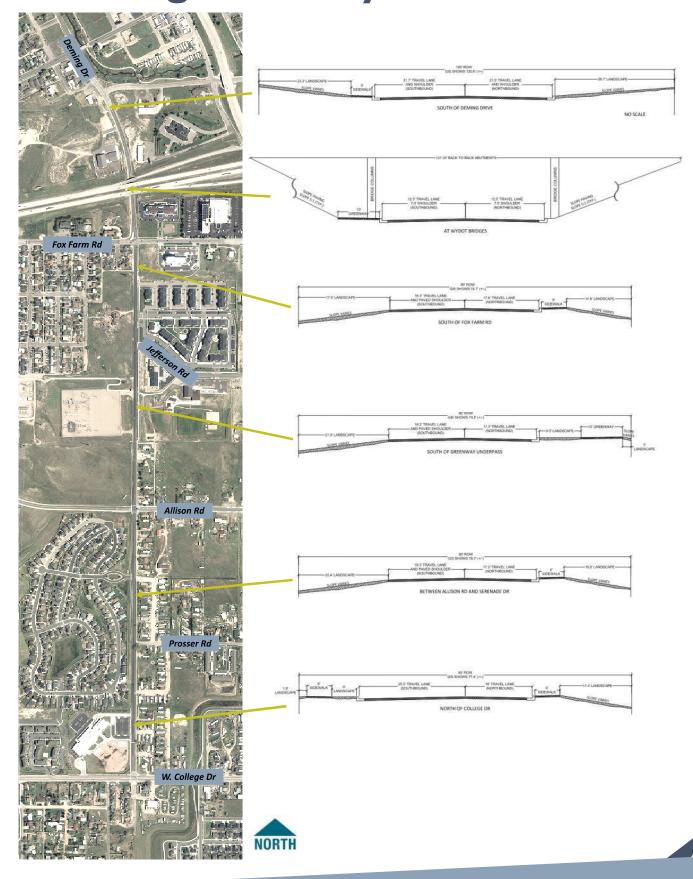

## **Existing Roadway Cross Sections**

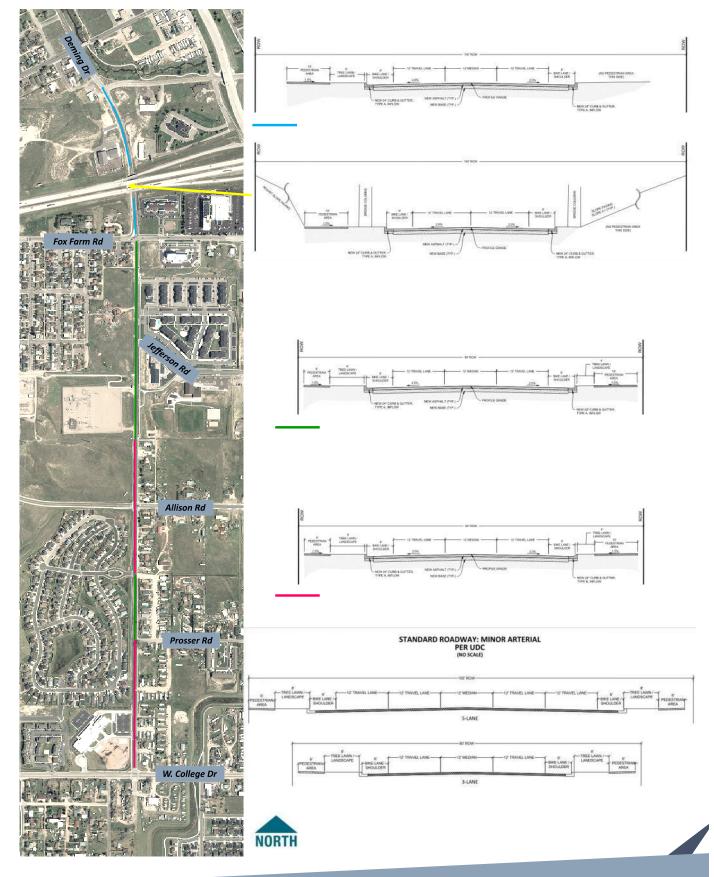

## Proposed Roadway Cross Sections

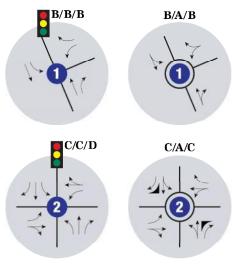

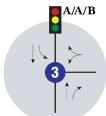

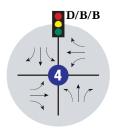

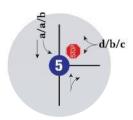

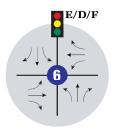

## **Build Alternatives 2045 Traffic Conditions**

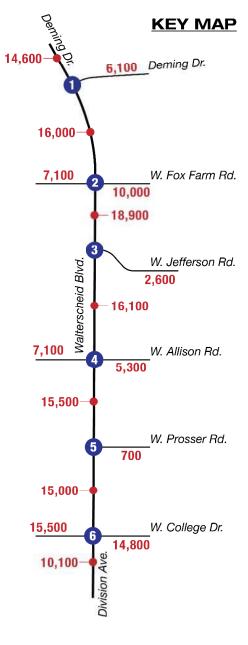

#### **LEGEND**

XXXX = Daily Traffic Volumes

AM/Midday/PM Peak Hour Overall Signalized

Intersection Level of Service

= AM/Midday/PM Peak Hour Unsignalized x/x/x

Movement or Level of Service

= Stop Sign

= Traffic Signal

## Plan Improvements

#### Roadway

- 3-lane minor arterial in 80-foot right-of-way,
- Additional right-of-way needed at select intersections
- 2-lane at I-80 bridges
- No parking on the street
- Street lighting

#### Intersections

- Auxiliary turn lanes
- Signalization or roundabout at Fox Farm
- Consider roundabout at Deming

#### Multimodal / Complete Streets

- Greenway full length
- Sidewalk Fox Farm to Rossman, maintain cross walk near Rossman
- On-Street bike lane
- Pedestrian protection at bridges

#### • Stormwater Drainage

- Convey stormwater to the Allison Channel
- · Install pipe and inlets
- Replace a culvert

#### Phasing

· Identify near-term improvements

#### Other Opportunities?

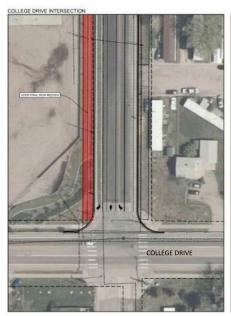

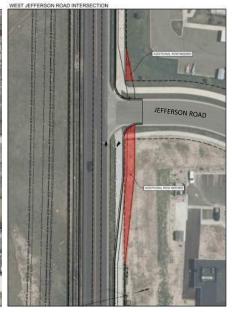

# Proposed Intersection Improvements

- Left, thru, and right lanes
- Signal remains
- ROW needed for wider roadway and replacement sidewalk next to playground
- Coordinate with Division Avenue Plan

- Left, thru, and right lanes
- Signal remains
- ROW needed for wider roadway and new greenway
- Greenway to cross Allison on east side of intersection

- Turn lanes for eastbound traffic
- May warrant signalization in future
- ROW needed for wider roadway and new greenway
- Greenway to cross Jefferson on east side of intersection

- Left, thru, and right lanes
- Numerous power poles to be relocated
- ROW needed for wider roadway and new greenway
- Greenway to cross Fox Farm on east side and Walterscheid on north side of intersection

- Single-lane roundabout with auxiliary lanes
- Three existing power poles behind proposed curb, one to be relocated
- ROW needed for wider roadway and new greenway
- Greenway to cross Fox Farm on east side and Walterscheid on north side of intersection

Steering Committee Meeting Minutes

### MINUTES KICK-OFF MEETING

March 3, 2021 Via Teams®

### **Participants**

- Cheyenne MPO Jillian Harris, Tom Mason, and Christopher Yaney
- BenchMark Engineers Scott Larson and Erin Gates
- FHU Lyle DeVries and Charles Buck
- GLM Design Gene MacDonald

- The MPO is working on obtaining the existing traffic counts, crash data, and speed data. The MPO
  is expecting to have it available within the next few weeks.
- The existing plans, reports, and studies noted in the RFP should be reviewed. Plan Cheyenne was recently updated with critical information to this project.
- BME will provide a list of items to the MPO for requested data.
- Data collection, known projects, and foreseeable changes in the project area:
  - o BME will reach out to the City for the Fox Farm / Walterscheid intersection plans or project update and for as-builts of the greenway underpass.
  - o BME will reach out to the City regarding the property northwest of the intersection of Walterscheid and Allison. BME may also reach out to the new property owner.
  - BME will begin discussions with WYDOT Resident Engineer regarding the existing bridges and any programmed improvements near this project.
  - Bids were received recently for the Harmony Valley sewer. BOPU is involved with this project. BME will reach out to BOPU for information and anticipated construction schedule.
  - BME will also reach out to BOPU and SCWSD for investigation of their systems in the project area.
- FHU will prepare a memo summarizing the methods and assumptions that will be used for the analysis of the traffic data.
- GLM has begun work in the SWMM.
- The MPO has been directed to begin holding in-person public meetings with a virtual component.
   BME will work with the MPO as we develop a public participation plan specific to this project, health orders, etc.
- At this time, BME believes the first public meeting to be held in the first half of June as shown on our schedule. This is dependent on when data is made available to our team.
- We anticipate the first public meeting to be an information sharing event where we will let the
  public know what we have learned, as well as a chance for the public to tell us what they know
  and what their concerns are. Our team will consider alternative locations if a public school facility
  is not available.
- BME noted that although not in the scope of work, our staff will be surveying the corridor. BME will not bill for this work.
- We recognize this project is rather straight forward with a leading alternative. Per the MPO, other
  desired outcomes include understanding the educational institutions and incorporation of the
  pedestrian component will be critical. Additionally, the modeling and forecasting filled the TAZs
  with housing. There is a high potential for residential development, particularly affordable
  housing, near and adjacent to Walterscheid within the next 10 years. A business park is being
  developed south of the project off US 85.

### **House Keeping Items**

- Our team will communicate directly with Jillian and Tom. Any communication with Chris from our team will include Jillian and Tom cc'd. Any assumptions or clarifications that the City Traffic Engineer should provide input on will be sent through Chris. The MPO will begin communication and coordination with other departments and agencies.
- Jillian will send an example of a recent invoice for BME to follow. Invoices will be percent complete per task, include sub-consultant breakdowns, include the associated date range for the services completed, and include a summary/progress report. Invoices will be sent to Nancy Olson with Jillian and Tom cc'd.

### **Next Meeting**

March 31, 2021, virtually. BME will send an invite.

MEETING MINUTES

March 31, 2021

Via Teams®

### **Participants**

- Cheyenne MPO Jillian Harris, Tom Mason, and Christopher Yaney
- BenchMark Engineers Scott Larson and Erin Gates
- FHU Lyle DeVries, Charles Buck, and Faith Kelley
- GLM Design Gene MacDonald

#### Discussion

- The MPO has provided traffic data; FHU is working through it. FHU is working on a memo regarding the methods and assumptions.
  - o The team was reminded the Connect 2045 plan was adopted in December 2020.
  - FHU requested the shape files or screen shots for TAZs and data and would prefer the shape files.
  - o FHU will need the signal timing. Chris will work with the City and WYDOT to obtain this data
  - o The team was reminded of the interactive crash map that can be found online.
  - o It seems the roadway grades may be contributing to speeding at certain areas.
  - Peak hour in the PM is between 3-4 and is associated with the schools in the area. COVID may be impacting this peak. Additionally, schools have increased the bus radii to 1.5 miles for elementary and 2 miles for secondary students, so more parents are dropping off and picking up students. These radii are not anticipated to change without a state legislative action. The team will look into shorter timeframes (15-minutes) within the peak hour.
  - Multi-modal information will be incorporated for forecasting.
- The intersection at Fox Farm and Walterscheid is being designed for signals. BME will contact the City (Anissa) to understand the schedule for construction.
- BME is reviewing the existing data and has concerns with the 5-lane collector recommended in Connect 2045.
  - 100-foot ROW is needed for a 5-lane road, the existing ROW appears to be 80-feet throughout the corridor.
  - It was recommended to look into getting 10 feet on both sides. There may be some challenges to obtain this additional ROW this at all locations due to development, utility easements, etc.
  - The recommendations from this plan must be justified by the data and analysis.
- BME has surveyed the roadway and is working on the CAD file. BME will contact Jennifer Corso to obtain GIS data.
- GLM needs the CAD survey to continue with the drainage study. GLM has a plan set for the Allison Road project.
- BME has contacted BOPU regarding the Allison Draw Interceptor (new sanitary sewer) that is a
  public-private partnership project. Construction is anticipated for this summer. BME will obtain
  more specific dates and information from BOPU.
- The MPO provide BME with a schematic-level plan for a proposed hotel southeast of the intersection at Fox Farm and Walterscheid. This hotel will access from Fox Farm.

#### **Public Input**

 The MPO shared experiences from the Converse meeting held earlier in the month that was presented entirely via Zoom. They haven't received much feedback but learned to make zoom

- more useable. Postcard flyers were sent to approximately 200 addresses within 0.25 miles of the corridor.
- BME will work with the MPO to develop a list of stakeholders along to the corridor to meeting with (i.e., LCSD1, Ed Ernst, Head Start, Boys and Girls Club, etc.).

#### Schedule

• The MPO suggests that the first public meeting be held before school is let out. Currently the last day is scheduled for June 3<sup>rd</sup>. This may change due to the snow week.

### **House Keeping Items**

- For the next meeting BME and FHU will provide a graphic of pinch points along the corridor.
- The MPO suggested recording meetings but left it as optional for our team.

### **Next Meeting**

• April 28, 2021, 9:00 am, virtually. BME will send an invite.

MEETING MINUTES

April 28, 2021

Via Teams®

### **Participants**

- Cheyenne MPO Jillian Harris, Tom Mason, and Christopher Yaney
- BenchMark Engineers Scott Larson and Erin Gates
- FHU Lyle DeVries, Charles Buck, and Faith Kelley
- GLM Design Gene MacDonald

- Project Task Update
  - Review of Studies is ongoing.
  - Review of Bridges and Structures. We have received plans from WYDOT for the bridges and from the City for the greenway underpass.
  - Review of Utilities. We have requests into both BOPU and SCWSD. BOPU has indicated the sanitary sewer from Harmony Meadows is not crossing within the limits of this project.
  - o Traffic Safety Analysis:
    - A context map and accompanying table (included with the agenda) shows speed limits along the corridor, locations where speed data were collected, and speeding within the corridor. There may be an opportunity to raise the speed limit to 35 south of Deming, with a reduced speed ahead warning. A radar feedback sign may be beneficial. Data includes the average speed and the 85<sup>th</sup> percentile, what would the city prefer us to use? Anissa indicated to Chris she would like to see both.
    - A review of the crash data was presented in the documents attached to the agenda. The team would like to research more of the data for Deming, Allison, and College. (Of note, a subsequent review of data sources identified that some of the crashes initially depicted were later found to not be related to the study intersections. The updated information indicates that Allison Road shows the highest number of crashes of the study intersections.) Fox Farm has the highest rate of crashes. There are some sight distance issues at Allison and insufficient roadway striping along SB Walterscheid approaching College Drive. There are questions on the two pedestrian/bike crashes at Allison. Can more information be provided?
      - A follow up analysis has been performed, indicating that the Pedacycle crash was caused by the bicyclist losing the ability to brake. The bicyclist traveling eastbound on Allison was not able to stop when they saw red pedestrian signal or car in intersection and collided with car traveling southbound on Walterscheid.
      - In the other reported accident, a pedestrian was walking westbound across Walterscheid with green ped signal. Vehicle was turning eastbound left onto northbound Walterscheid. Motorist was unable to see pedestrian due to A-frame of vehicle and did not yield to pedestrian causing collision.
    - It was noted by the MPO that the County is planning on putting the Division Avenue project on the 6<sup>th</sup> Penny list. Forecasts for Division were included in the modeling.

- We have reached out the City regarding their plans and schedule for the planned work at that intersection and have not heard back yet.
- It was noted that traffic volumes were recorded on a Monday, an atypical practice for traffic engineering as Mondays may not accurately represent conditions on the majority of weekdays. The MPO noted that the counts would be utilized as representative.
- A preliminary daily traffic volume forecast map indicates significant growth in the area by 2045. The forecast numbers are adjusted per standard methodology. The MPO is concerned the growth in the area may be underestimated. It was also noted that a new interchange from I-25 to Division/Wallick was not included in the forecast. Based on the counts, the volumes are reaching the limits for a 5-lane roadway per the UDC.
- The Stormwater Management Model (SWMM) is set-up and incorporating the Allison Road storm sewer and secondary outfalls. Numerous new developments are planned in or adjacent to the corridor. The model will include evaluating the outfall near the Boys and Girls Club and a new storage facility off Allison Road. Preliminary findings will be available by Mid-May.
- Work on the 35% design plans will begin following the public meeting and an analysis of alternatives. Typical sections will be under consideration.
  - A pinch points graphic was provided with the agenda documents. This graphic
    includes the various existing constraints along the corridor. WYDOT has indicated
    they have plans for bridge deck rehabilitation, but not full reconstruction of the
    three bridges.
  - Cross sections for Minor Arterials (3-lane and 5-lane) per the UDC were provided along with existing cross sections along the corridor.
- Road Design Discussion
  - Consideration of forecasted counts
  - Consideration of constraints
  - Intersection operations
  - o If 3-lane is proposed, right turn lanes will be needed at intersections
  - o The MPO directed the team to try for 3-lane Minor Arterial, and where appropriate, add right turn lanes, as it appears we will need to work within the existing 80-foot ROW.
  - o However, the MPO will recommend with other property is platted or re-platted that additional ROW is granted.

#### **Public Input**

- The first public meeting was originally scheduled for June 9<sup>th</sup>.
- The first public meeting is scheduled for May 25<sup>th</sup>. BME will reach out to facilities in the area to identify a location. The meeting should be about 1.5 hours, recommended between 5:30 and 7:00 pm.
- The meeting will be in-person with a virtual component. A formal presentation will be planned and streamed via Facebook by West Edge Collective, the MPO will coordinate directly with West Edge Collective. The remainder of the meeting will be open house format.
  - Meeting materials will be hard copy and digital.
  - The team will meet with the MPO about a week before the meeting to finalize content.
- A stakeholder list was provided, additional stakeholders and contact information will be incorporated.
  - BME will begin to reach out to these entities and invite them to the public meeting.

• The team asked when other stakeholder agencies will be involved with these meetings.

### **Schedule and Upcoming Meetings**

- Pre-Public Meeting: TBD (one week before)
- Public Meeting: May 25, 2021, evening
- Steering Committee and Post-Public Meeting: June 2

MEETING MINUTES

June 22, 2021

Via Teams®

### **Participants**

- Cheyenne MPO Jillian Harris and Tom Mason
- BenchMark Engineers Scott Larson and Erin Gates
- FHU Lyle DeVries, Charles Buck, and Faith Kelley
- GLM Design Gene MacDonald
- Cheyenne BOPU Bryce Dorr
- WYDOT Ryan Shields, Wes Bybee
- Laramie County Molly Bennett
- City of Cheyenne Vickie Nemecek, Tom Cobb, and Charles Bloom

#### Discussion

- Project Task Update
  - o Review of Studies: ongoing, as needed.
  - Review of Bridges and Structures: we have received plans from WYDOT for the bridges and from the City for the greenway underpass.
  - o Traffic Safety Analysis: design team will need to include the Fox Farm intersection.
  - o Traffic Analysis: design team has looked at existing conditions, no-build forecasted conditions, projected volumes, and proposed improvements.
  - o Drainage Analysis: continuing. Are designs or as-built plans available for Allison Road, east and west of Walterscheid? WYDOT staff emailed plans for east of Walterscheid.
  - o 35% Design Plans: will follow the analysis of alternatives and recommendations.
  - Cost Estimate: to accompany 35% design plans.
  - Public/Stakeholder Involvement: summary of first public meeting to follow.

### Road Design Discussion

- o 3-lane vs. 5-lane. Decision was made during meeting on April 28, 2021 to move forward with 3-lane minor arterial and incorporate turn lanes, as needed, at intersections.
- City Engineering staff understand the physical constraints along the corridor, including at the I-80 bridges.
- Future volumes are pushing the upper limits for a 3-lane minor arterial per the UDC.
   Future volumes are based on anticipated residential development adjacent to the corridor (northwest of Walterscheid and Allison) and near the corridor (south of College).
- Auxiliary lanes will be key at some intersections.
- Figures summarizing the traffic analysis will be provided to the City Engineering Department.
- City Planning and Development Department expressed the need for accommodation for bicyclists and pedestrians.
- The developers of the anticipated high-density residential subdivision northwest of Walterscheid and Allison have not been in contact with the Planning staff recently.
- o A new hotel is moving forward southwest of the Walterscheid and Fox Farm without specific accommodations for improvements or modifications at the intersection.

### • Summary of Public Meeting

- A presentation was made summarizing the public meeting and comments received from the public.
- The data provided by the MPO does back-up speeding may be occurring along the corridor.

- The design team will look into the sight distance under the I-80 bridges.
- Comments noted that law enforcement is rarely observed along the corridor. Participants
  on the call were reminded that mapping of the various jurisdictions is not included in the
  design team's scope of work.

#### **Public Input**

• The design team will continue to reach out to stakeholders.

#### **Discussion of Additional Work**

- The MPO will send a sample contract modification to BME for the addition of the Fox Farm intersection into this project. The general scope of work will be to look at alternatives (signalization, roundabout, other alternatives) and to complete 35% design plans for the recommended improvements.
- City Engineering will send data, design information, utility mapping, etc. for the Fox Farm intersection.
- The City Engineering Department needs to know if additional rights of way will be required. The proposed hotel at Fox Farm will not be required to plan their site, or delay their site planning, based on this intersection.
- The City Engineering Department does not have a contact for the WAPA lines. The overhead power at Fox Farm is Black Hills.

#### **Additional Discussion**

- Laramie County included the Division and Wallick project on the 6<sup>th</sup> Penny ballot since it was moved down the STIP list. There is no amendment to the STIP yet, may be needed following the outcome of the election (November 2021).
- Add Anissa Gerard and Chris Yaney to meeting invite list.

### **Schedule and Upcoming Meeting**

• Steering Committee Meeting: August 17, 2021, 1:30 PM, anticipated for 1 hour.

MEETING MINUTES

January 4, 2022

Via Teams®

### **Participants**

- Cheyenne MPO Tom Mason and Christopher Yaney
- BenchMark Engineers Erin Gates and Scott Larson
- FHU Lyle DeVries, Charles Buck, and Faith Kelley
- WYDOT Ryan Shields
- City of Cheyenne Wes Bay and Charles Bloom
- Cheyenne BOPU Bryce Dorr
- Not in attendance:
  - o Gene MacDonald (GLM), provided update to BME for this meeting
  - Molly Bennett (Laramie County PW)
  - Tom Cobb (City Engineer's Office)
  - Vickie Nemecek (City PW Office)
  - South Cheyenne Water and Sewer District

- Changes to Steering Committee
  - o Tom Mason will be MPO's project manager; Jillian is no longer at the MPO.
  - Ryan Shields will be WYDOT's primary connection; Wes Bybee has moved to another WYDOT group.
  - Wes Bay will be added to the contact list.
- Schedule update
  - Work completed prior to December 2021 is not shown. This schedule also lists anticipated steering committee meetings.
- Refresher of completed work
  - The ultimate future vision of the roadway is 5-lane, however right-of-way is needed. 35% designs will be completed for 3-lane. Traffic data has been collected and provided. Traffic forecasts have been analyzed. Traffic operations and safety analysis has been completed. Structures have been reviewed. Drainage study is nearly complete; we do not need any land from WY Fresh (200 Walterscheid) for detention. One public meeting was held. Initial discussions of alternatives were started. The project now includes the intersection at Fox Farm Road.
- Road and Intersection Design Discussions
  - Moving forward with 3-lane design, per the UDC, with a 10-foot greenway path on one side.
  - A reduction of complete roadway will be needed at bridges due to structures. 2-lanes and protect pedestrians. The slope paving under the bridge may need to be modified.
  - The greenway should be located on the east side between Fox Farm and College, and the
    west side from Fox Farm to Deming. No sidewalk will be needed along the east side
    between Fox Farm and Deming.
  - A question was raised regarding a potential land-use restriction due to the old landfill near between Deming/1<sup>st</sup> and I-80.
  - The greenway crossing Deming/1<sup>st</sup> may need to shift east rather than be at the intersection.
  - o The city has designs for the greenway on the west side from 3<sup>rd</sup> to 4<sup>th</sup>.

- Accesses to residences will include looking beyond the ROW to see if accesses can be consolidated. Additionally, BME requests Laramie County's insight on this.
- o Fox Farm intersection has been studied previously. The all-way stop is not as effective as other methods. FHU has modeled to 2045. The intersection needs more lanes or widening. A full two-lane roundabout all the way around is not warranted. A roundabout with improvements has been analyzed. FHU will verify driver tolerance for delays. Underground utilities have caused problems with other designs. The design team will look into shifting the roundabout to the north and west. The designs will consider the 5-lane future roadway. Proper access to the fire station (northwest of the intersection) is essential. FHU will look into the number of vehicles the intersection can process as signalized or as a roundabout. Intersection analysis have been completed.
- o Forecast information including Harmony Valley and south of Orchard Valley will be provided by the MPO to BOPU.
- Stakeholder coordination
  - Design team will reach out to various stakeholders. Overhead power in the area is Black Hills Energy. The gas line is Holly Frontier. The city will look for a contact for Western Area Power Administration (WAPA) and the fiber optic line.
- Requested information
  - BME requests input regarding the format, sections, etc. to the written portion of the plan from the MPO.

#### **Schedule and Upcoming Meeting**

- Steering Committee Meeting: March 16, 2022, 10:30 AM, anticipated for 1.5 hours.
- Second Public Meeting: Tuesday, March 22, 2022, try for Rossman Elementary.

MEETING MINUTES

March 16, 2022

Via Teams®

### **Participants**

- Cheyenne MPO Tom Mason and Christopher Yaney
- BenchMark Engineers Erin Gates
- FHU Charles Buck and Faith Kelley
- GLM Gene MacDonald
- WYDOT Taylor McCort
- City of Cheyenne Tom Cobb, Wes Bay, Charles Bloom, and Mark Christensen
- Laramie County Public Works Molly Bennett
- City Fire Department Byron Matthews
- Not in attendance:
  - Cheyenne BOPU Bryce Dorr
  - o City of Cheyenne Vickie Nemecek
  - South Cheyenne Water and Sewer District

- Changes to Steering Committee
  - Taylor McCort will be WYDOT's primary connection.
  - Byron Matthews will be added to the contact list.
- Project Update
  - The preliminary draft of the plan was submitted to the MPO on February 2, 2022.
    - Review of the proposed cross sections and how they vary from the UDC standard.
    - Review of intersection improvements. The left turns at College should be offset.
    - The county intends to move forward with the Division Wallick project within the next few years. \$3,045,399.52 was approved on the 6<sup>th</sup> Penny ballot in 2021.
    - The plan will recommend if any properties redevelop the accesses should be moved off Walterscheid.
    - The property owner northwest of Allison and Walterscheid is planning to move forward with development, beginning at the western portion and moving eastward. A pre-application meeting has not been held with the city.
    - City staff can assist with plat research for plats not available via the Cheyenne and Laramie County Cooperative GIS mapping system.
    - Designs may need to attach the sidewalk and greenway at certain locations to avoid conflicts with existing features (WAPA tower leg, underpass headwalls).
    - Information regarding WAPA easements has been provided.
    - Design team will look more in the geometry of the roundabout at Fox Farm to see if the footprint can be reduced. City Fire has concerns with ingress and egress to Fire Station 2, as well as the functionality of the roundabout. If the intersection is signalized, emergency services can control the signal to clear the intersection. The design team will review the level of service without the auxiliary lanes. The width of the lanes at the roundabout was asked. Additional design criteria is needed to complete the RODEL analysis. The diameter of the roundabout is 90' to the inner back of curb, and 140' to the outside back of curb.
    - The plan recommends street lighting. City Engineering will provide a contact for BHE.

- Clarification on the forecasted traffic volumes was requested. The MPO provided constrained and unconstrained data. The MPO will discuss this with WYDOT offline.
- The draft of the Transportation Operations report was provided. This report summarizes
  the data and provides text to support the recommendations and graphics provided
  previously.
- The draft of the plan included a preliminary drainage report. Stormwater can be kept within the right of way with surface features and piping. Adequate capacity is available in the Allison Channel. Improvements are needed near Harmony Meadows; this will include a larger pipe and an easement to pipe the flows to the channel. Discussions will be held with owners at 200 Walterscheid.

#### Stakeholder coordination

- The second of two public meetings will be held March 22, 2022 at Rossman Elementary School from 5:30 PM to 7:00 PM.
  - The meeting will include a powerpoint and display boards. Items will be provided to the MPO for review prior to the meeting.
  - All members of the Steering Committee and encouraged to attend.
- o The design team will continue to reach out to stakeholders.
- o The city will provide contact information for any fiber optic lines in the project limits.
- The project was presented to the MPO Technical Committee on February 16, 2022
- The project was scheduled to be presented to the MPO Citizens' Advisory Committee on February 17, 2022. This did not happen due to a lack of a quorum.
- o The project is scheduled to be presented to the MPO Policy Committee on March 23, 2022

#### **Draft Plan Review**

 Review comments on the draft plan, including the transportation operations report, are to be completed and provided to Erin Gates (ering@benchmarkengineers.com) with Tom Mason cc'd (tmason@cheyennecity.org) by end of day on March 31, 2022.

### **Schedule and Upcoming Meeting**

- The design team will need at least one month after the issuance of the review comments to reach concurrence and finalize the plan.
- Second Public Meeting: Tuesday, March 22, 2022, try for Rossman Elementary.
- Steering Committee Meeting: April 14, 2022, 8:30 AM, anticipated for 1.5 hours.

MEETING MINUTES

April 14, 2022

Via Teams®

### **Participants**

- Cheyenne MPO Tom Mason and Christopher Yaney
- BenchMark Engineers Erin Gates
- FHU Lyle Devries, Charles Buck, and Faith Kelley
- WYDOT Taylor McCort
- City of Cheyenne Tom Cobb, Wes Bay, Charles Bloom, and Mark Christensen
- Laramie County Public Works Molly Bennett
- Cheyenne Fire and Rescue Byron Mathews
- Not in attendance:
  - o GLM Design
  - o Cheyenne BOPU
  - City of Cheyenne Public Works
  - South Cheyenne Water and Sewer District

- Changes to Steering Committee
  - No changes.
- Project Update
  - The preliminary draft of the plan was submitted to the MPO on February 2, 2022, comments have been received from the MPO and City Public Works.
- Items to be resolved
  - Discussion of traffic forecasting
    - Feedback was received from the public, specifically the westbound left turn movement on Allison Rd. A public meeting attendee had expressed concern that the westbound left turn at this intersection experiences significant volume increases during school peak hours and it is difficult to complete the turn. A review of the traffic counts did not indicate a significant peak hour issue with this left turn. However, the traffic counts do indicate a significant increase in eastbound through traffic during the 2:45 pm − 3 pm 15 minute time period. It is likely that the westbound permissive left turn movement experiences more delay during this time. Adding a protected left turn arrow to assist with this movement should be considered, creating a protected/permitted condition that could be activated during only school peak hours.
    - The design team has further considerations of traffic volume forecasts of the various models and has requested additional information regarding the models.
    - The design team is refining the operational analysis of the roundabout at Fox
    - The city engineering department will have one of their consultants review the Transportation Operations Report.
    - The design team discussed the forecasting update:
      - The RTP travel demand model used as the basis for traffic volume forecasts to date included a 5-lane section for Walterscheid. This scenario does not reflect the current identified option for Walterscheid – a 3-lane option. It is the hypothesis of the design team that the 5-lane condition along Walterscheid in the model causes more traffic to be drawn tot eh

roadway in the long term projection. Re-running the model with a 3-lane section may help provide more accurate forecasts and confirm/refute this hypothesis. The group indicated that such a re-run would not require alterations to the Connect 2045 document.

- There are future traffic operations issues at Fox Farm noted with the more aggressive growth 5-lane model scenario.
- Looking deeper at other scenarios, the E+C scenario kept Walterscheid as a 2-lane roadway and showed more north/south traffic along South Greeley Highway that Walterscheid, further supporting the need to adjust the re-run of the model with a 3-lane Walterscheid.
- 3-lane vs 5-lane modeling outcomes will have implications at intersections.
- The design team is looking at an alternatives/sensitivity scenario to provide a recommendation based on 3-lane Walterscheid. Tendency is to not alter the more aggressive growth-based analyses, but test options with a lower growth scenario as a sensitivity analysis.
- At Fox Farm intersection the design team is reviewing the roundabout. Considering the operations of a single-lane roundabout and when it would begin to fail operationally. It could last until 2035 or 2040 with aggressive growth. With less growth it could potentially operate acceptably until 2045.
- Tom Cobb noted that input from the Fire Chief is needed, and they are more comfortable with pre-emptive signals.
- Byron Matthews noted that until they want to see a layout and have a discussion.
   He also noted that curves need to be negotiated.
- A preliminary layout was shown with the access to the fire station on the west side of the building. This access is on the city's property.
- A meeting will be set-up with the MPO, Fire and Rescue, City Engineering, and the design team.
- Intersection improvement recommendations
  - Intend to increase capacity at intersections.
- o Reminded the group regarding the notations on the plans about the right-of-way
- Recommending street lighting
  - Wes Bay will provide contact information for BHE.
- Stakeholder coordination
  - The second public meeting was held March 22, 2022, at Rossman Elementary School from
     5:30 PM to 7:00 PM.
    - The meeting included a presentation with slides, a question and answer session, and display boards.
    - A summary of the presentation, discussion, and comments was presented.
  - The design team will continue to reach out to stakeholders.
  - The project will be presented to the MPO Technical Committee and MPO Citizens' Advisory Committee on May 25, 2022.
  - The project was also presented to the MPO Policy Committee on March 23, 2022

#### **Action Items**

 MPO will conduct an additional model run to evaluate "RTP" and "RTP with development" with Walterscheid modeled as a 3-lane roadway

• MPO will provide information on the road classification used for Walterscheid for each model run.

### **Schedule and Upcoming Meeting**

- Coordination meeting with MPO, Fire and Rescue, City Engineering, TBD.
- Steering Committee Meeting: May 17, 2022, 8:30 AM, anticipated for 1.5 hours.

MEETING MINUTES

May 26, 2022

Via Teams®

### **Participants**

- Cheyenne MPO Tom Mason, Christopher Yaney, and Ginni Stevens
- BenchMark Engineers Erin Gates
- FHU Lyle Devries and Faith Kelley
- GLM Design Gene MacDonald
- WYDOT Taylor McCort
- City of Cheyenne Tom Cobb, Charles Bloom, and Vicki Nemecek
- Laramie County Public Works Molly Bennett
- Cheyenne Fire and Rescue Byron Mathews
- Not in attendance:
  - Cheyenne BOPU
  - South Cheyenne Water and Sewer District

- Changes to Steering Committee:
  - o Ginni Stevens is new Senior Transportation Planner with the MPO
- Project Update
  - Design team has reviewed the comments from the preliminary submittal. There are a few to review, clarify, or address:
    - ADA ramps will be properly aligned.
    - Additional rights-of-way will be noted.
    - Modeling is being completed for fire trucks if the intersection at Fox Farm is a roundabout.
    - Drainage concerns between College and Sta 18+00. This project will improve drainage.
    - Considerations of elevation differences. Separate greenway/sidewalk can help with grade differences. This project will not produce preliminary grading plans.
    - Verified LCSD1's limits for providing transportation.
    - Verified the year of expenditure for the project identified in the Connect 2045 Master Transportation Plan.
    - Verified the status of the Division/Wallick project in the 2022WYDOT STIP. Is there an update or status report for the Division/Wallick project?
    - Verify who provides snow removal. Plan will note the city provides snow and ice control, and not snow removal.
    - Plan will note how the road was dedicated in public right-of-way.
    - Has the city's surveyor looked into the easement documents for the WAPA lines?
  - Work in progress
    - Traffic forecasting
      - Prior modeling was for Walterscheid as a 5-lane road, recommendation is for 3-lane.
         Modeling has been updated for 3-lane since the model assigns traffic based on number of lanes. Results show forecasted volumes are lower. Design team will use the RTP plus development scenario and will adjust the forecast volumes.
      - Team will also look at intersections with the revised volumes, particularly if a signal is warranted at Jefferson and if right turn lanes are warranted.
      - City Engineering will provide the traffic study for the proposed McDonalds at South Greeley Highway and Jefferson to the design team.

- A change order may be warranted for the additional analysis. The design team will look into this. This work may be a sensitivity analysis.
- Fox Farm intersection
  - Design team looked at all-way stop, signalized, and roundabout.
  - This is a multi-criteria decision: level of services, utilities, rights-of-way, construction costs, maintenance costs, proximity to fire station, etc. The design team will develop a matrix to assist in the recommendation for the intersection.
  - City Engineering concerns include emergency services, pre-emption, navigation of the intersection, and utilities.
  - City Fire and Rescue is leaning toward signalization based on experience.
  - There are concerns with local drivers not understanding how to navigate roundabouts when emergency vehicles are present. There is a possibility of including instruction signage. There are concerns with additional wear and tear on vehicles due to the curb apron. It appears the minimum curb height for the apron is 1" with significant pavement color differences. A third tier further inside the circle could also be constructed that is higher.
  - Consider a new approach into the fire station on the west side of the property.
- Finalizing drainage report and recommendations
  - Design team is finalizing pipe sizing and inlet locations. The improvements will reduce the peak flows with the proposed system.
  - Not directly related to this project: property at 200 Walterscheid has an erosion problem due to material from the ditch. The existing fence is buried about half its height. Curb and gutter and landscaping could help this. There is no need for stormwater detention for this project on this private property.
- Additional items for discussion
  - Should a sidewalk be included on the east side between Deming and Fox Farm. There are significant elevation differences between the back of curb and existing grade. The recommendation for no pedestrian facilities in this specific area will be carried forward.
  - WYDOT has a project for College Drive from I-25 to Campstool. The design team will reach investigate this further.
- Stakeholder coordination
  - The project was be presented to the MPO Technical Committee and MPO Citizens' Advisory Committee on May 25, 2022.

#### **Action Items**

- A small group meeting (design team, MPO, City Engineering, and City Fire) will be held June 10, 2022, to discuss the Fox Farm intersection. Primary items for consideration will be operations and navigation.
- Design team will look at budget and check need for contract amendment for additional analysis.

#### **Schedule and Upcoming Meeting**

- Coordination meeting with MPO, Fire and Rescue, City Engineering, TBD.
- Steering Committee Meeting: June 30, 2022, 3:30 PM, anticipated for 1.5 hours.

MEETING MINUTES

June 30, 2022

Via Teams®

### **Participants**

- Cheyenne MPO Tom Mason, Christopher Yaney, and Ginni Stevens
- BenchMark Engineers Erin Gates
- FHU Lyle Devries
- WYDOT Taylor McCort
- City of Cheyenne Tom Cobb
- Cheyenne BOPU Bryce Dorr
- Cheyenne Fire and Rescue Byron Mathews
- Not in attendance:
  - GLM Design
  - City Planning and Public Works
  - o Laramie County Public Works
  - South Cheyenne Water and Sewer District

- Project Update
  - Items to be addressed in the plan
    - Ownership and maintenance of storm sewer improvements to be resolved later.
    - WAPA easements, the city is still looking into. If not verified during this project, will be noted to be included with the recommended boundary survey.
    - Intersection at Deming needs additional auxiliary lanes. Previously, it was recommended to have signalization or become a roundabout. Signalization needs westbound left and right, northbound right, and southbound left lanes. Roundabout closes W. 4th Street: residential and business would only have access from Thomes via 5<sup>th</sup>, also limits access to 409 W. 4<sup>th</sup> from 4<sup>th</sup> Street only and closes the partial alley south of 409 W. 4<sup>th</sup>. A suggestion was made that 4<sup>th</sup> Street and the alley be closed if the intersection is signalized. A question was asked regarding changes to the distribution of trucks with the modifications at 5th. The roundabout option helps the intersection with better operation for westbound left and operational movements. A signal is the least favorable option for operations. Current turn lanes are adequate, the northbound could be lengthened. A question was asked regarding a year or volume when a roundabout could be recommended. Such a recommendation may be based on the westbound left turn que and delay and could be a later phase of the improvements to the corridor. Crashes are not a significant issue. Speeding is more of an issue and roundabouts can help with speeding. It was recommended the intersection remain as is and for the city to re-analyze after the 5<sup>th</sup> bridge is completed. The design team will continue to gather feedback from the MPO on this intersection.
    - A decision matrix has been developed for the intersection at Fox Farm. A WB-60 vehicle can navigate the roundabout, however future design phases should refine the splitter islands, lane widths, etc. The curb height should be reduced along the inner circle, the slope of the apron will be appropriate for accommodate large vehicles. A small group discussed this intersection a few weeks ago and the two options. The design team was instructed to keep progressing on the decision matrix and the costs. Maintenance costs that were shown were from the WRD feasibility analysis. These will be updated and for 25-year life. It was noted the roundabout should operate better than the signal during

off-peak hours. The MPO requested the design team's recommendation. All the data will be included in the plan.

- Work in progress
  - Traffic forecasting is being finalized and is anticipated to include recommendations for right turn lanes at most intersections. The traffic operations report is being finalized with the revised modeling. The 5-lane modeling data will be included in the appendix of the report.
  - The drainage modeling, report, and recommendations are being finalized and incorporated into the design plans. The proposed improvements will connect to existing infrastructure as much as reasonably possible.
- Additional items for discussion
  - The amendment for additional work will be at the Finance Committee on July 5<sup>th</sup> and finalized on July 11<sup>th</sup>.

### **Schedule and Upcoming Meeting**

• Steering Committee Meeting: August 30, 2022, 10:00 AM.

MEETING MINUTES

August 17, 2022

Via Teams®

### **Participants**

- Cheyenne MPO Tom Mason, Christopher Yaney, and Ginni Stevens
- BenchMark Engineers Erin Gates
- FHU Lyle Devries, Faith Kelly
- WYDOT Taylor McCort
- City Public Works Vicki Nemecek
- City of Cheyenne Tom Cobb
- Cheyenne BOPU Bryce Dorr
- Cheyenne Fire and Rescue Byron Mathews
- Not in attendance:
  - o GLM Design
  - o City of Cheyenne Planning
  - o Laramie County Public Works
  - South Cheyenne Water and Sewer District

- Project Update
  - o Items to be addressed in the plan
    - Deming Walterscheid intersection. FHU noted the existing turn lanes are short and the intersection currently operates at an acceptable level of service during peak conditions. The 2045 forecast anticipates traffic volumes to be approximately double with a LOS of F during peak times. The que will increase to nearly 400' and 2-3 minute wait for westbound traffic. Forecasted peak hour volumes are just short of the criteria to warrant a signal. There are no defined warrants for roundabouts, as that is a multi-criteria decision. Roundabouts can also provide traffic calming. A roundabout will be recommended for future installation in the plan. This could be 2030 to 2035. However, the modeling should be updated and monitored following the completion of the signal and bridge at 5<sup>th</sup> to verify if any traffic is diverted from this intersection. With a roundabout, 4<sup>th</sup> Street will dead end; a cul-de-sac was recommended, and nearby accesses will be affected by this closure/dead end.
    - Fox Farm Walterscheid intersection. A smaller group discussed the intersection options and worked toward an idea of signalized preemption on the north, east, and south approaches. BME and City Engineering have reached out to Black Hills Energy for additional information regarding utilities in the intersection without response. BME looked to the MUTCD regarding traffic control signals and hybrid beacons for emergency vehicle access. The design team found a few examples of fire stations around near roundabouts. City Fire and Rescue understands the challenge of 3-way preemption. An example in Lakewood, Colorado is a reasonable approximation, however a question regarding the response type from this station was asked. City Engineering feels specific questions and solutions to preemption can be answered and resolved during the design of the intersection. It was determined the best solution for the intersection is a roundabout. The design team presented an update to the decision matrix for this intersection. The cost estimate extends from the intersection to locations where the typical cross section would be in place. Right-of-way impacts on the southeast quadrant are noted in the decision matrix and may impact the hotel's parking. The design team has

not contacted property owners at the intersection where additional rights-of-way are needed. With either intersection, the east approach into the fire station will be closed, a new approach to the west will be constructed, a hammerhead will be installed in the east parking.

- BOPU has no additional items for inclusion.
- Work to finalize
  - The design team will finalize the traffic operations report, drainage report, plans, cost estimate, etc.

### **Schedule and Upcoming Meeting**

- Design team anticipates submitting final plan for MPO review by September 14<sup>th</sup> to meet the schedules for the Technical Committee, Citizens' Advisory Committee, and Policy Committee. The MPO anticipates this will be at the 2<sup>nd</sup> City Planning Commission Meeting in October and will go to the County Planning Commission as well.
- The Steering Committee may not meet again but can track the progress through the various committees and meetings.

## Appendix I

Resolutions
