APPENDIX A – NRCS SOIL REPORT

United States Department of Agriculture

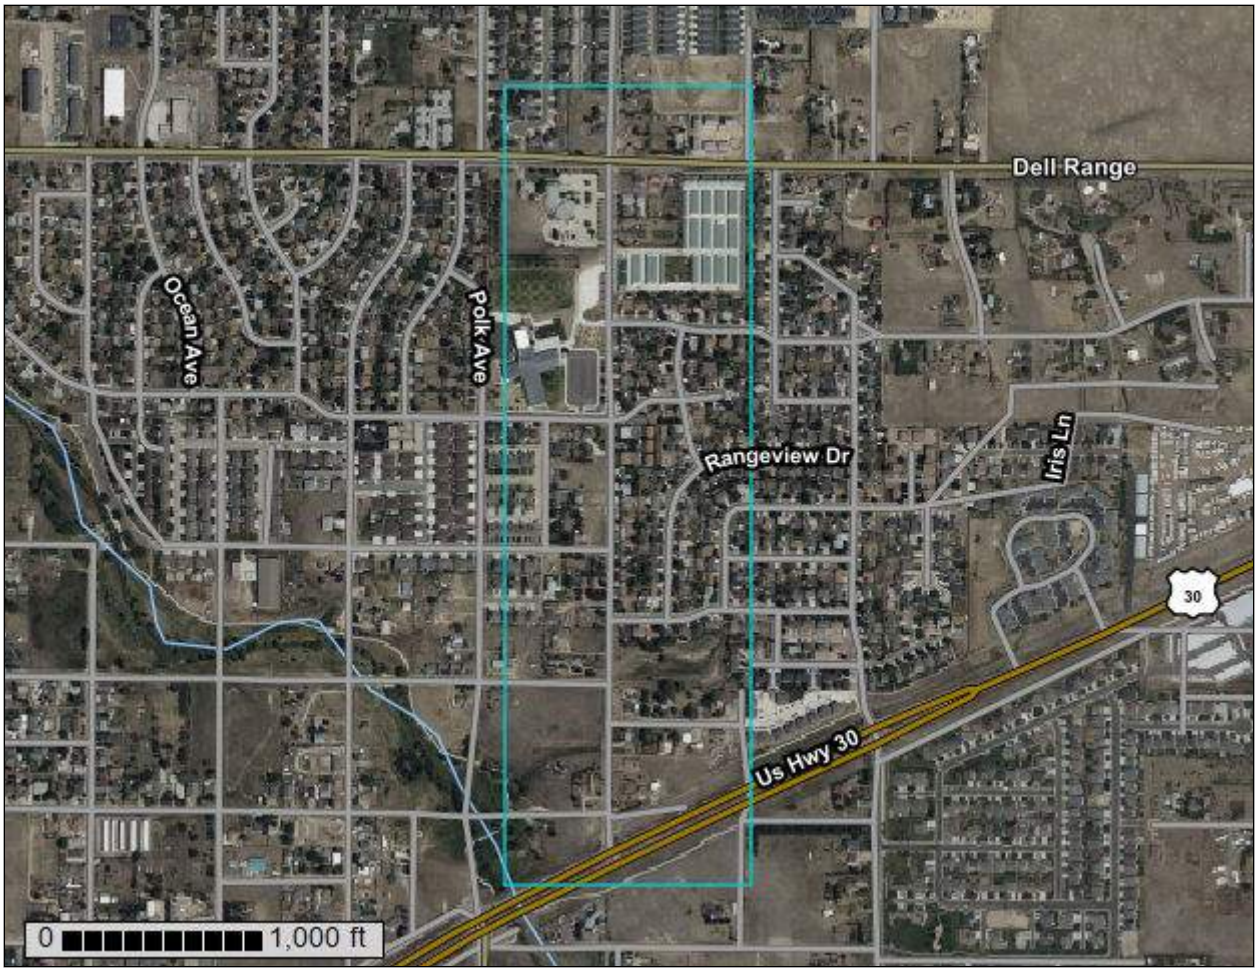
NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Laramie County, Wyoming, Western Part

Van Buren Corridor Study



January 4, 2023

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Contents

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Laramie County, Wyoming, Western Part
Survey Area Data: Version 15, Sep 9, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 2, 2022—Aug 8, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
102	Altvan-Dix complex, 6 to 10 percent slopes	0.1	0.1%
104	Ascalon loam, cool, 0 to 6 percent slopes	33.1	29.4%
142	Manter sandy loam, 0 to 6 percent slopes	7.4	6.6%
184	Urban land-Ascalon complex, 0 to 6 percent slopes	34.5	30.6%
187	Urban land-Merden complex, 0 to 3 percent slopes	2.2	2.0%
189	Urban land-Poposhia-Trimad complex, 3 to 15 percent slopes	35.3	31.3%
Totals for Area of Interest		**112.6**	**100.0%**

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not

mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Laramie County, Wyoming, Western Part

102—Altvan-Dix complex, 6 to 10 percent slopes

Map Unit Setting

National map unit symbol: 2tlq8
Elevation: 4,800 to 6,330 feet
Mean annual precipitation: 13 to 19 inches
Mean annual air temperature: 45 to 50 degrees F
Frost-free period: 115 to 135 days
Farmland classification: Farmland of statewide importance, if irrigated

Map Unit Composition

Altvan and similar soils: 60 percent
Dix and similar soils: 30 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Altvan

Setting

Landform: Interfluves on alluvial fans
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Parent material: Loamy alluvium over tertiary aged sandy and gravelly alluvium

Typical profile

A - 0 to 9 inches: loam
Bt1 - 9 to 13 inches: sandy clay loam
Bt2 - 13 to 25 inches: sandy clay loam
Btk - 25 to 28 inches: sandy clay loam
2C - 28 to 80 inches: very gravelly sand

Properties and qualities

Slope: 6 to 8 percent
Depth to restrictive feature: 28 to 34 inches to strongly contrasting textural stratification
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.20 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.1 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Low (about 3.7 inches)

Interpretive groups

Land capability classification (irrigated): 4e
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: C
Ecological site: R067AY122WY - Loamy (Ly)

Hydric soil rating: No

Description of Dix

Setting

Landform: Interfluves on alluvial fans
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Nose slope, side slope, crest
Down-slope shape: Convex, linear
Across-slope shape: Linear, convex
Parent material: Tertiary aged sandy and gravelly alluvium

Typical profile

A - 0 to 10 inches: very gravelly sandy loam
C1 - 10 to 28 inches: very gravelly coarse sand
C2 - 28 to 80 inches: very gravelly coarse sand

Properties and qualities

Slope: 6 to 10 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Excessively drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): High (2.00 to 6.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Maximum salinity: Nonsaline to very slightly saline (0.1 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Very low (about 1.9 inches)

Interpretive groups

Land capability classification (irrigated): 7s
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: A
Ecological site: R067AY112WY - Gravelly (Gr)
Hydric soil rating: No

Minor Components

Wages

Percent of map unit: 10 percent
Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: R067AY122WY - Loamy (Ly)
Hydric soil rating: No

104—Ascalon loam, cool, 0 to 6 percent slopes

Map Unit Setting

National map unit symbol: 2tlp8
Elevation: 5,400 to 6,550 feet
Mean annual precipitation: 13 to 19 inches
Mean annual air temperature: 45 to 50 degrees F
Frost-free period: 115 to 135 days
Farmland classification: Farmland of statewide importance, if irrigated

Map Unit Composition

Ascalon, cool, and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ascalon, Cool

Setting

Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Wind-reworked sandy alluvium

Typical profile

Ap - 0 to 6 inches: loam
Bt1 - 6 to 12 inches: sandy clay loam
Bt2 - 12 to 19 inches: sandy clay loam
Bk - 19 to 35 inches: sandy clay loam
C - 35 to 80 inches: loam

Properties and qualities

Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 6.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.1 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum: 1.0
Available water supply, 0 to 60 inches: Moderate (about 8.2 inches)

Interpretive groups

Land capability classification (irrigated): 3e

Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B
Ecological site: R067AY122WY - Loamy (Ly)
Hydric soil rating: No

Minor Components

Altvan
Percent of map unit: 8 percent
Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: R067AY122WY - Loamy (Ly)
Hydric soil rating: No

Wages
Percent of map unit: 7 percent
Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: R067AY122WY - Loamy (Ly)
Hydric soil rating: No

142—Manter sandy loam, 0 to 6 percent slopes

Map Unit Setting
National map unit symbol: 3j68
Elevation: 5,000 to 6,500 feet
Mean annual precipitation: 15 to 17 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 115 to 125 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition
Manter and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Manter

Setting
Landform: Knolls, alluvial fans, terraces
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Eolian deposits and/or alluvium derived from sedimentary rock

Typical profile

A - 0 to 7 inches: sandy loam
Bt1 - 7 to 19 inches: loam
Bt2 - 19 to 23 inches: fine sandy loam
Ck - 23 to 60 inches: fine sandy loam

Properties and qualities

Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Moderate (about 8.0 inches)

Interpretive groups

Land capability classification (irrigated): 3e
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B

184—Urban land-Ascalon complex, 0 to 6 percent slopes

Map Unit Setting

National map unit symbol: 3j7m
Elevation: 5,000 to 6,500 feet
Mean annual precipitation: 15 to 17 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 115 to 125 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 65 percent
Ascalon and similar soils: 25 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ascalon

Setting

Landform: Fan remnants, alluvial fans
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from sandstone

Typical profile

H1 - 0 to 8 inches: loam
H2 - 8 to 24 inches: sandy clay loam
H3 - 24 to 60 inches: loam

Properties and qualities

Slope: 0 to 6 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: High (about 10.3 inches)

Interpretive groups

Land capability classification (irrigated): 3e

187—Urban land-Merden complex, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 3j7q
Elevation: 5,000 to 6,500 feet
Mean annual precipitation: 15 to 17 inches
Mean annual air temperature: 41 to 45 degrees F
Frost-free period: 90 to 115 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 65 percent
Merden and similar soils: 30 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Merden

Setting

Landform: Flood plains
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy alluvium derived from igneous, metamorphic and sedimentary rock

Typical profile

H1 - 0 to 12 inches: silty clay loam
H2 - 12 to 24 inches: silty clay loam
H3 - 24 to 60 inches: silty clay loam

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: FrequentNone
Frequency of ponding: None
Calcium carbonate, maximum content: 8 percent
Gypsum, maximum content: 1 percent
Maximum salinity: Slightly saline to moderately saline (4.0 to 8.0 mmhos/cm)
Sodium adsorption ratio, maximum: 10.0
Available water supply, 0 to 60 inches: High (about 9.6 inches)

Interpretive groups

Land capability classification (irrigated): 4w
Land capability classification (nonirrigated): 4w

189—Urban land-Poposhia-Trimad complex, 3 to 15 percent slopes

Map Unit Setting

National map unit symbol: 3j7s
Elevation: 6,500 to 7,500 feet
Mean annual precipitation: 15 to 17 inches
Mean annual air temperature: 41 to 45 degrees F
Frost-free period: 90 to 115 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 60 percent
Poposhia and similar soils: 15 percent
Trimad and similar soils: 15 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Poposhia

Setting

Landform: Hills
Landform position (three-dimensional): Side slope
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Alluvium derived from sandstone, siltstone and shale

Typical profile

H1 - 0 to 6 inches: silt loam
H2 - 6 to 60 inches: silt loam

Properties and qualities

Slope: 3 to 10 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: High (about 12.0 inches)

Interpretive groups

Land capability classification (irrigated): 4e
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: B
Ecological site: R067AY122WY - Loamy (Ly)
Hydric soil rating: No

Description of Trimad

Setting

Landform: Hills
Landform position (three-dimensional): Side slope
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Gravelly alluvium derived from igneous and sedimentary rock

Typical profile

H1 - 0 to 3 inches: loam
H2 - 3 to 10 inches: gravelly loam
H3 - 10 to 34 inches: very gravelly loam
H4 - 34 to 60 inches: very gravelly sandy loam

Properties and qualities

Slope: 6 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 35 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Low (about 5.1 inches)

Interpretive groups

Land capability classification (irrigated): 6s
Land capability classification (nonirrigated): 6s
Hydrologic Soil Group: B
Ecological site: R067AY112WY - Gravelly (Gr)
Hydric soil rating: No

Minor Components

Piezon

Percent of map unit: 5 percent
Hydric soil rating: No

Rock outcrop

Percent of map unit: 5 percent
Hydric soil rating: No

SURVEYORS CERTIFICATE

STATE OF WYOMING)
) SS.
COUNTY OF LARAMIE)

I, John A. Steil, Registered Land Surveyor in the State of Wyoming, hereby certify that this plat of IMPERIAL VALLEY, a subdivision situated in the NW 1/4, of Section 26, T 14 N,R 66 W of the 6th P. M., was prepared from notes of a survey conducted by me or under my supervision during the month of January, 1978, and that this plat correctly and accurately represents said survey of the lands shown hereon.

John A. Steil
Wyoming L. S. No. 2500

DEDICATION

KNOW ALL PERSONS BY THESE PRESENTS that Laramie County School District No. One, Our Savior Lutheran Church, Herb Associates, a joint venture consisting of Riverton Development Co. and H. E., Inc., Earl D. Kunkel and Joan M. Kunkel, husband and wife; Le Roy K. Conner and Lorraine E. Conner, husband and wife, owners in fee simple of the following described property situated in the Northwest Quarter of Section 26, Township 14 North, Range 66 West of the 6th P.M., Laramie County, Wyoming, more particularly as described as follows:

Commencing at the northeast corner of Section 26, T 14 N, R 66 W of the 6th P. M., thence North 89 degrees 58 minutes West along the north line of said Section 26 (with all bearings contained herein relative thereto) a distance of 33.00 feet; thence South a distance of 40.00 feet; thence North 89 degrees 58 minutes West, a distance of 2621.22 feet; thence South 0 degrees 40 minutes 40 seconds west, a distance of 1267.18 feet to the point of beginning; thence North 88 degrees 36 minutes 39 seconds West, a distance of 658.90 feet; thence North 0 degrees 19 minutes 06 seconds East, a distance of 660.00 feet; thence North 88 degrees 43 minutes 16 seconds west, a distance of 664.00 feet to the west line of the NE 1/4 NW 1/4 of said Section 26; thence North 00 degrees 32 minutes 38 seconds East along said west line of the NE 1/4 NW 1/4, a distance of 611.16 feet to a point 40.00 South of the north line of said Section 26; thence North 88 degrees 43 minutes 16 seconds west parallel with said north line of Section 26, a distance of 946.49 to the northeast corner of East Lakeview Subdivision; thence South 00 degrees 12 minutes 18 seconds west along the east line of said East Lakeview Subdivision, a distance of 814.81 feet; thence North 89 degrees 04 minutes 06 seconds West, a distance of 60.00 feet; thence South 00 degrees 12 minutes 18 seconds West, a distance of 329.12 feet; thence North 89 degrees 04 minutes 06 seconds West, a distance of 621.36 feet; thence South 00 degrees 48 minutes 54 seconds west, a distance of 60.00 feet; thence South 89 degrees 04 minutes 06 seconds East, a distance of 1343.00 feet; thence North 0 degrees 32 minutes 02 seconds West, a distance of 208.71 feet; thence North 89 degrees 07 minutes 38 seconds west, a distance of 27.48 feet; thence South 0 degrees 32 minutes 38 seconds West, a distance of 1303.33 feet to the north line of Sunnyside Addition 6th Filing, thence South 89 degrees 14 minutes 47 seconds East along the north line of said Sunnyside Addition 6th Filing, a distance of 1205.12 feet; thence South 0 degrees 33 minutes 06 seconds west, a distance of 99.34 feet to the northerly right of way of U. S. Highway No. 30; thence North 64 degrees 33 minutes 08 seconds East, along said northerly right of way line, a distance of 28.69 feet to the west line of U. S. Hwy 30 right of way; thence North 0 degrees 33 minutes 06 seconds East along said west line of U.S. Hwy 30 right of way, a distance of 93.21 feet; thence South 89 degrees 14 minutes 47 seconds West, a distance of 10.90 feet; thence North 0 degrees 48 minutes 04 seconds East, a distance of 394.71 feet; thence South 89 degrees 12 minutes 36 seconds East, a distance of 84.33 feet; thence North 0 degrees 43 minutes 35 seconds East, a distance of 913.89 feet; thence South 88 degrees 08 minutes 2 seconds West, a distance of 28.65 feet to the point of beginning. Containing 69.43 acres more or less.

Have caused the same to be surveyed, platted and known as IMPERIAL VALLEY, do hereby declare that the subdivision of said land as it appears on this plat, to be their free act and deed and in accordance with their desires, and do hereby dedicate to the use of the public forever the streets, drives, avenues, places, open space/activity area and grant the easements for the purposes indicated hereon.

RESOLUTION NO. 5620

ENTITLED: **"A RESOLUTION AUTHORIZING THE MAYOR AND THE CITY CLERK TO SIGN A FINAL PLAT FOR DEL-VAN STORAGE PARK, BEING A REPLAT OF ALL OF GOODWATER ADDITION, GOODWATER DRIVE, AND WATER BLUE LANE AND A PORTION OF THE NORTHEAST QUARTER OF THE NORTHWEST QUARTER OF SECTION 26, T.14N., R.66W., 6TH P.M., CHEYENNE, WYOMING (LOCATED SOUTH OF AND ADJACENT TO DELL RANGE BLVD., EAST OF AND ADJACENT TO VAN BUREN AVE.)."**

WHEREAS, the owners of the property described herein have subdivided said land in accordance with the statutes in such cases made and provided; and

WHEREAS, the owners of the property described herein have caused a subdivision plat of said land to be made, acknowledged, and certified, particularly describing the lot, block, easements and right-of-way; and

WHEREAS, the above described subdivision plat has been presented to the City of Cheyenne Planning Commission for consideration and the Planning Commission has recommended that the Governing Body approve the subdivision plat; and

WHEREAS, the plat has been duly executed by the Development Office.

NOW, THEREFORE BE IT RESOLVED BY THE GOVERNING BODY OF THE CITY OF CHEYENNE, WYOMING, THAT the subdivision described as Del-Van Storage Park, a replat of all of Goodwater Addition, Goodwater Drive, and Water Blue Lane and a portion of the NE¼ of the NW¼ of Section 26, T.14N., R.66W., 6th P.M., Cheyenne, Wyoming, be and the same hereby is approved and confirmed as presented, and that the Mayor and the City Clerk be and are hereby authorized, empowered, and directed to execute said plat when Community Facility Fees are paid and after an executed copy of Del-Van Storage Park Annexation has been filed with the County Clerk and Ex-Officio Register of Deeds for Laramie County, Wyoming. If the final plat of Del-Van Storage Park is not acted on and recorded within 18 months of the date below, this approval shall be void in accordance with Section 2.1.3.c.5(a) of the UDC.

RESOLUTION NO. 1047

ENTITLED: "A RESOLUTION AUTHORIZING THE MAYOR AND CITY CLERK OF THE CITY OF CHEYENNE TO EXECUTE IN BEHALF OF SAID CITY AN APPROVAL FOR FILING OF THE PLAT OF LAND SUBDIVISION OF TRACTS 303 AND 304 SUNNYSIDE ADDITION 7th FILING, LARAMIE COUNTY, WYOMING."

WHEREAS, Walter H. Land and Ida E. Land have heretofore offered to the City of Cheyenne, for its approval of the filing thereof, a certain plat entitled Land Subdivision of Tracts 303 and 304 Sunnyside Addition 7th Filing, Laramie County, Wyoming; and

WHEREAS, Chapter 29, Section 1102, Wyoming Compiled Statutes, 1945, State of Wyoming, provides that plats of land adjacent to or within one mile of the boundaries of any incorporated city or town shall be jointly approved by both the Board of County Commissioners and the legislative body of such city or town before such plat shall be filed and recorded in the office of the County Clerk; and

WHEREAS, no good reason appears to the Council why the plat aforesaid should not be filed for record with the County Clerk, it being understood that the same does not constitute an addition to the City of Cheyenne, nor in any manner obligate the said City to improve or maintain said subdivision or any part thereof;

NOW, THEREFORE, BE IT RESOLVED BY THE COUNCIL OF THE CITY OF CHEYENNE:

That the City does approve for filing in the office of the County Clerk and Ex-officio of Deeds of Laramie County, Wyoming, the plat heretofore referred to as Land Subdivision of Tracts 303 and 304 Sunnyside Addition 7th Filing acknowledged and subscribed by Walter H. Land and Ida E. Land; and that the Mayor and City Clerk be, and they hereby are, authorized and empowered to execute on such plat the written approval of said City, for the purpose of entitling the same to record.

ENTITLED: **"A RESOLUTION AUTHORIZING A STREET NAME CHANGE FROM MONROE AVENUE TO FRANK COURT FOR THE PORTION OF THE STREET LOCATED NORTH OF ROCK SPRINGS STREET AND ORIGINALLY PLATTED WITH SUNNYSIDE ADDITION, 7TH FILING, CITY OF CHEYENNE, LARAMIE COUNTY, WYOMING."**

WHEREAS, a plat has been submitted, Dry Creek Business Park, which proposes creating a new segment of Monroe Avenue; and

WHEREAS, the new segment of Monroe Avenue is a logical extension of the segment of Monroe Avenue platted in 1993 in Swartz Subdivision; and

WHEREAS, having parallel streets with the same name is generally undesirable and confusing; and

WHEREAS, the only structure potentially affected by this change is currently addressed on Frank Court;

NOW, THEREFORE BE IT RESOLVED BY THE GOVERNING BODY OF THE CITY OF CHEYENNE, WYOMING, THAT the requested street name change from Monroe Avenue to Frank Court for the portion of the street located north of Rock Springs Street and originally platted with Sunnyside Addition, 7th Filing, is hereby approved and the City Engineer or his designated representative is directed to change the City of Cheyenne Official Map.

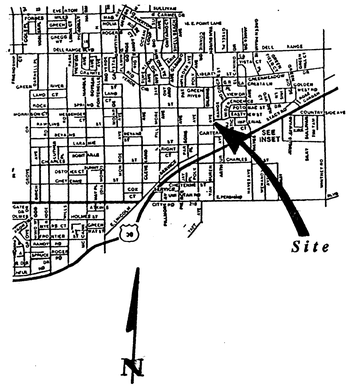
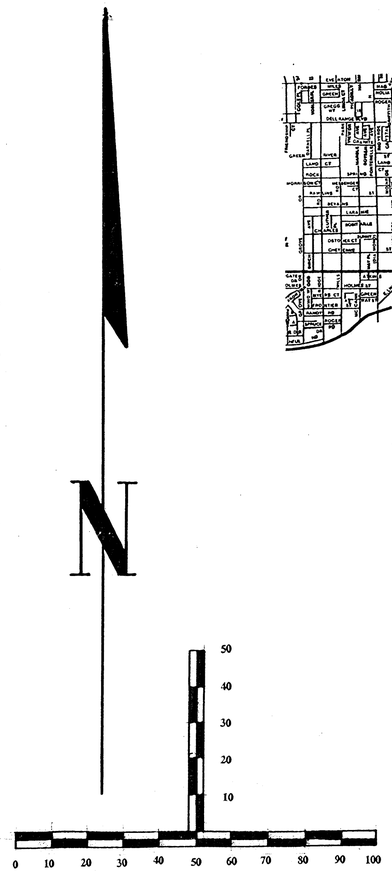
Vicinity Map

(Not Drawn to Scale)





Scale: one inch equals twenty feet (1:240)

Notes:

1. The basis of bearings is the westerly boundary of Van Buren Avenue, as monumented, being N 00°00'00" E.
2. The original corners for the parcel of land to be replatted were found and replaced. The southwest corner was a ½ inch diameter rebar without a plastic cap. The remaining three corners were ½ in diameter rebars with plastic caps marked "DMH 558" [Donald M. Hopkins, P.E.&P.L.S.].
3. The eight foot wide easement along the southerly boundary is for the existing pole line for the purposes of electricity, telephone, and cable television service to 3808 Van Buren Avenue and 3814 Van Buren Avenue.
4. The monuments for the corners of this parcel of land are 2 inch diameter aluminum caps affixed to iron pipes and stamped: *PE/PLS 3723.*

Certificate of the Surveyor

I, Dr. Herbert W. Stoughton, Wyoming Professional Engineer and Professional Land Surveyor No. 3723, hereby certify that this plat was prepared by me from a survey performed under my supervision during the month of July 1998, that the monuments are set as shown, and that the plat correctly and accurately depicts said survey.

Note: The originals of this plat are signed in red ink and an embossed PE/PLS seal was affixed.

Section, quarter and sixteenth corners will be marked with a dot at the corner location. The alpha-numeric coordinate number is then determined for the intersection of the two lines. A corner that applies to two or more townships shall be filed under all that apply by the use of photo copies.

Closing corners will be indexed under the township in which they control ownership. For 1/64, 1/256, 1/1024 and non-aliquot corners lying between grid designations, mark the appropriate grid area with a dot and use the index code to the north and west (local systems may be used if the method is approved by the County Surveyor or Clerk and a written description of its use is filed in the front of each book of certificates).

BOOK 1313

Directions for using the Cross Index Plat

Section, quarter and sixteenth corners will be marked with a dot at the corner location. The alpha–numeric coordinate number is then determined for the intersection of the two lines. A corner that applies to two or more townships shall be filed under all that apply by the use of photo copies.

Closing corners will be indexed under the township in which they control ownership. For 1/64, 1/256, 1/1024 and non–aliquot corners lying between grid designations, mark the appropriate grid area with a dot and use the index code to the north and west (local systems may be used if the method is approved by the County Surveyor or Clerk and a written description of its use is filed in the front of each book of certificates).

EASEMENT

KNOW ALL MEN BY THESE PRESENTS: That the undersigned, Lyle Wayne Keto, hereinafter referred to as GRANTOR, in consideration of the sum of two thousand one hundred dollars ($2,100.00+), the receipt of which is hereby acknowledged, hereby warrants, grants, bargains, sells and conveys to the CITY OF CHEYENNE and its BOARD OF PUBLIC UTILITIES, their successors and assigns, hereinafter collectively referred to as GRANTEE, a perpetual utility easement to construct, reconstruct, operate, maintain and remove such water and sewer pipelines and appurtenances thereto, including any necessary utilities, on, over, under, through and across certain lands owned by the GRANTOR, a strip of land being 20 feet in width, being a portion of Tracts 237, 238, 239 and 240, Sunnyside Addition, 6th Filing, Laramie County, Wyoming, being more particularly described on Exhibit "A" attached hereto and by this reference incorporated herein.

GRANTEE shall have the right of ingress and egress over and across the Land of the Grantor to and from the above described property and the right to clear obstructions on the easement premises.

GRANTOR reserves the right to occupy and use said Easement for all purposes not inconsistent with, nor interfering with the rights herein granted, specifically, the right to cross said easement with a water line at approximately the boundrary line between Tracts 238 and 239; and the right to construct a road or street.

The rights, conditions and provisions of this easement shall inure to the benefit of and be binding upon the heirs, executors, administrators, successors and assigns of the respective parties hereto, and by the execution and acknowledgement thereof, GRANTOR jointly and severally waives any homestead rights to the above-described lands so far as the same may be affected by this agreement.

IN WITNESS WHEREOF, I have hereunto set my hand this 17th day of June, 1996.

GRANTOR

Lyle Wayne Keto

Lyle Wayne Keto

LAND DESCRIPTION

A strip of land being 20 feet in width, being a portion of Tracts 237, 238, 239 and 240, Sunnyside Addition, Sixth Filing, Laramie County, Wyoming, and being more particularly described as follows:

Beginning at a point on the east line of said Tract 240, said point lying 359° 50′ 35" (with all azimuths being angles right from North and being based on the City of Cheyenne Control Net,) a distance of 289.74 feet from the southeast corner of said Tract 240;

thence 359° 50′ 35", along said east line, a distance of 20.00 feet to a point;

thence 270° 06′ 29", a distance of 327.58 feet to a point;

thence 221° 37′ 14", a distance of 194.29 feet, more or less, to a point on the northeast line of Dry Creek Parkway;

thence 135° 46′ 42", along said northeast line, a distance of 20.05 feet to a point;

thence 41° 37′ 14", a distance of 186.74 feet to a point;

thence 90° 06′ 29", a distance of 318.66 feet, more or less, to a point on the east line of said Tract 240, being the point of beginning;

said strip of land containing 0.24 acres, more or less.

EXISTING STREET CAPACITY CALCULATIONS

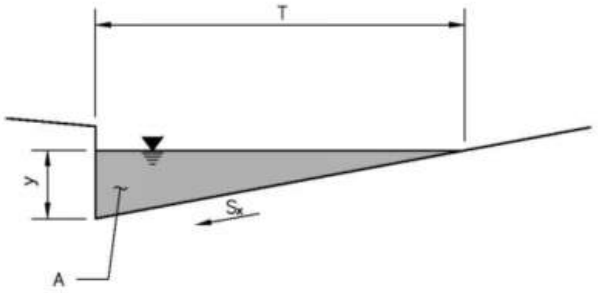

Figure 7-1. Gutter section with uniform cross slope

For a triangular cross section as shown in Figure 7-1, Manning's equation for gutter flow is written as:

$$Q = \frac{1.8}{n} A R^{2/3} S_o^{1/2} = \frac{0.56}{n} S_x^{5/3} S_o^{1/2} T^{8/3} \qquad \text{Equation 7-1}$$

Where:

Q = calculated flow rate for the half-street (cfs)

n = Manning's roughness coefficient (0.016 for asphalt street with concrete gutter, 0.013 for concrete street and gutter)

R = hydraulic radius of wetted cross section = A/P (ft)

A = cross-sectional area (ft^2)

P = wetted perimeter of cross section (ft)

S_x = street cross slope (ft/ft)

S_o = longitudinal slope (ft/ft)

T = top width of flow spread (ft).

The flow depth can be found using:

$$y = TS_x \qquad \text{Equation 7-2}$$

Where:

y = flow depth at the gutter flowline (ft).

Note that the flow depth generally should not exceed the curb height during the minor storm based on Table 7-2. Manning's equation can be written in terms of the flow depth, as:

$$Q = \frac{0.56}{nS_x} S_L^{1/2} y^{8/3} \qquad \text{Equation 7-3}$$

The cross-sectional flow area, A, can be expressed as:

$$A = \frac{S_x T^2}{2} \qquad \text{Equation 7-4}$$

The gutter velocity at peak capacity may be found from continuity ($V = Q/A$).

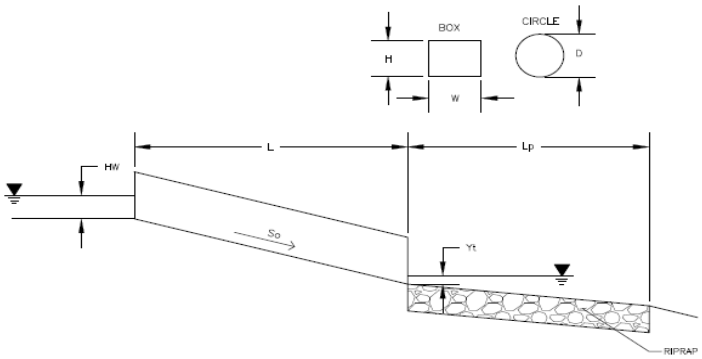
DETERMINATION OF CULVERT HEADWATER AND OUTLET PROTECTION

MHFD-Culvert, Version 4.00 (May 2020)

Project: **Van Buren**

ID: **Dry Creek Outlet**



Soil Type:
Choose One:
○ Sandy
○ Non-Sandy

Supercritical Flow! Using Adjusted Diameter to calculate protection type.

Design Information:

Design Discharge	Q =	19.4	cfs
Circular Culvert:			
Barrel Diameter in Inches	D =	24	inches
Inlet Edge Type (Choose from pull-down list)		Grooved Edge Projecting	
OR:			
Box Culvert:		**OR**	
Barrel Height (Rise) in Feet	H (Rise) =		ft
Barrel Width (Span) in Feet	W (Span) =		ft
Inlet Edge Type (Choose from pull-down list)			
Number of Barrels	# Barrels =	1	
Inlet Elevation	Elev IN =	5979	ft
Outlet Elevation **OR** Slope	Elev OUT =	5965.5	ft
Culvert Length	L =	840	ft
Manning's Roughness	n =	0.012	
Bend Loss Coefficient	k_b =	0	
Exit Loss Coefficient	k_x =	1	
Tailwater Surface Elevation	$Y_{t,\ Elevation}$ =	5974	ft
Max Allowable Channel Velocity	V =	5	ft/s

Calculated Results:

Culvert Cross Sectional Area Available	A =	3.14	ft^2
Culvert Normal Depth	Y_n =	1.14	ft
Culvert Critical Depth	Y_c =	1.58	ft
Froude Number	Fr =	1.90	**Supercritical!**
Entrance Loss Coefficient	k_e =	0.20	
Friction Loss Coefficient	k_f =	8.84	
Sum of All Loss Coefficients	k_s =	10.04	ft
Headwater:			
Inlet Control Headwater	HW_I =	2.57	ft
Outlet Control Headwater	HW_O =	N/A	ft
Design Headwater Elevation	**HW =**	**5981.57**	**ft**
Headwater/Diameter OR Headwater/Rise Ratio	**HW/D =**	**1.29**	

Outlet Control Headwater Approximation Method Inaccurate for Low Flow - Backwater Calculations Required

Outlet Protection:			
Flow/(Diameter^2.5)	Q/D^2.5 =	3.43	$ft^{0.5}/s$
Tailwater Surface Height	Y_t =	8.50	ft
Tailwater/Diameter	Yt/D =	4.25	
Expansion Factor	1/(2*tan(Θ)) =	6.70	
Flow Area at Max Channel Velocity	A_t =	3.88	ft^2
Width of Equivalent Conduit for Multiple Barrels	W_{eq} =	-	ft
Length of Riprap Protection	**L_p =**	**6**	**ft**
Width of Riprap Protection at Downstream End	**T =**	**3**	**ft**
Adjusted Diameter for Supercritical Flow	Da =	1.57	ft
Minimum Theoretical Riprap Size	d_{50} min=	0	in
Nominal Riprap Size	d_{50} nominal=	6	in
MHFD Riprap Type	**Type =**	**VL**

How many people answered survey	**24**	
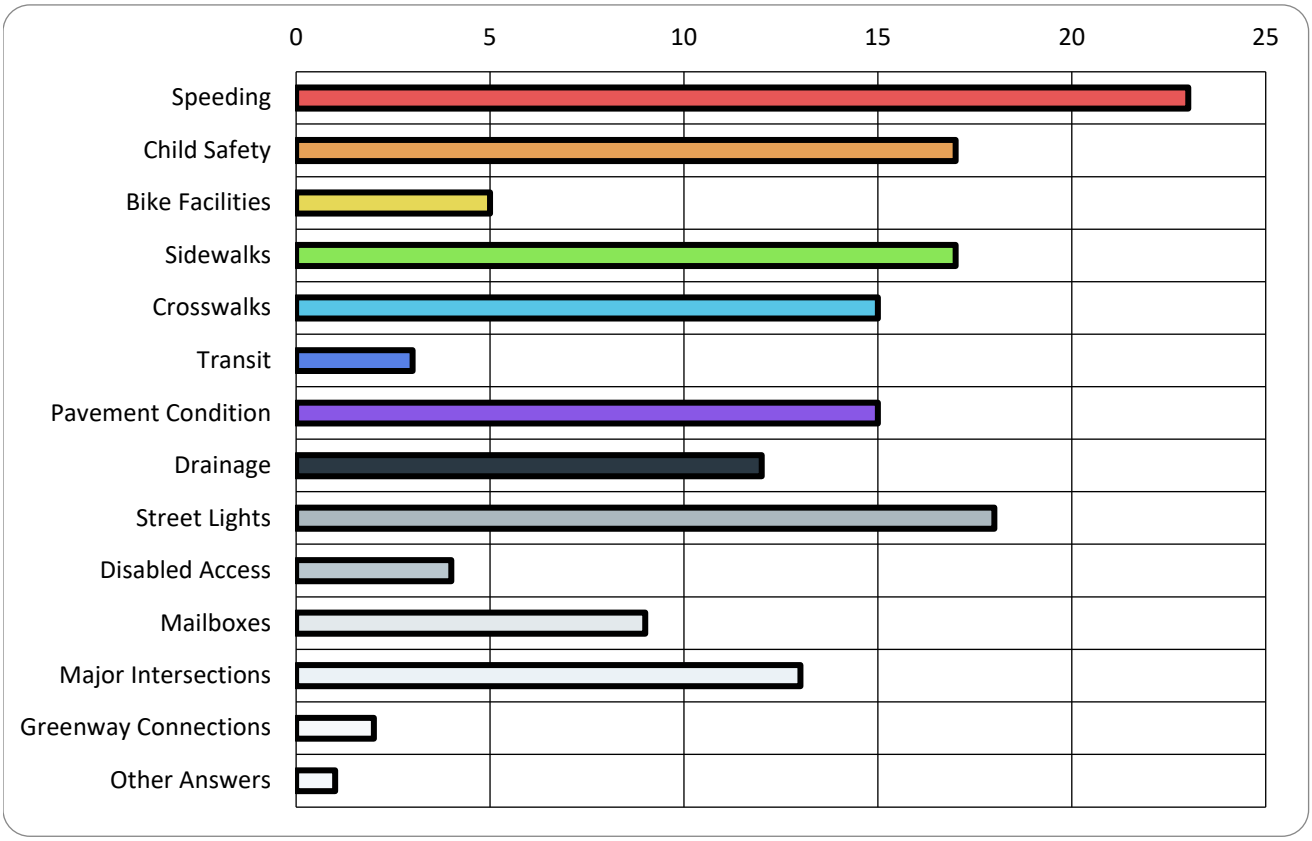
Skipped	**0**	



Phase 1 Van Buren Avenue Corridor Plan Survey

Q5 What improvement(s) would you most like to see along Van Buren Avenue?

Response
I would like to see 6' sidewalks, curb and gutter along the entire length, with shared vehicle-bicycle lanes, parking on one side only, and small roundabouts at Green River and Rawlins intersections to manage traffic and constrain driving speeds.
Ban large construction vehicles using VB as a shortcut.
It should not be a major cross street between Dell Range and Hwy 30 because it is a residential neighborhood with a major elementary school.
More lighting, slow down the auto traffic
With the large development of family homes and the increased amount of children crossing dell range it's crucial to have a safe way for children to cross dell range. I have witnessed people blow thru when the crosswalk lights are on. To be proactive and prevent another tragic incident it would be wise to install a bridge or tunnel for that crossing.
Sidewalks and maintenance of sidewalks. The sidewalks are so bad it's hard to safely ride or walk, and the other side has no sidewalks. Limited street lighting not only on that street but entire neighborhood. People go so fast on that street and only crosswalks are near the school. Also safety of the kids crossing del range from van buren. Most drivers don't notice the flashing crosswalk light there. Also during after school hours and busy times it's hard to make a left hand turn onto dell range.
I live on Van Buren and see people speeding numerous times a day. Two days ago a speeding car hit a street sign. There are no lights on long stretches of Van Buren. And despite the fact that children walk down this busy road to get on the bus before sunrise and get off the bus sometimes after sunset, there are also long stretches that do not have sidewalks.
Stop lights
Not sure but definitely need more lanes on Dell Range. Maybe somehow a stoplight at Van Buren and Dell Range.

Response	
Safety of people crossing road, new road paved, speed enforcement, curbing and sidewalk on Van Buren, annexation of county pockets (cost to homeowner), stop light at Van Buren and Dell Range, parking on both sides of Van Buren makes driving go down to one lane and congests the road and dangerous at times. Do not like the roundabout idea at all for this neighborhood	
4 way stop at Green River and Van Buren, remove the "connector street" designation, traffic light on Dell Range and Van Buren	
Slow speed to 25. Drainage is a problem.	
Traffic light on Dell Range. Drainage.	
Drainage	
Slower traffic, better sidewalks, stop light at Dell Range	
Traffic control at Dell Range, better mailbox access	
Slow down traffic! More lighting, access to mailboxes	
Slow down traffic - for kids, walkers and others. Better lighting at night. Better access to your mailboxes.	
Bike lanes, sidewalks (detached), safety for students, lower speeds, street trees, native grass (unirrigated), tree boulevards	
Speed zones with tickets issued.	
How many people answered survey	**20**
Skipped	**5**

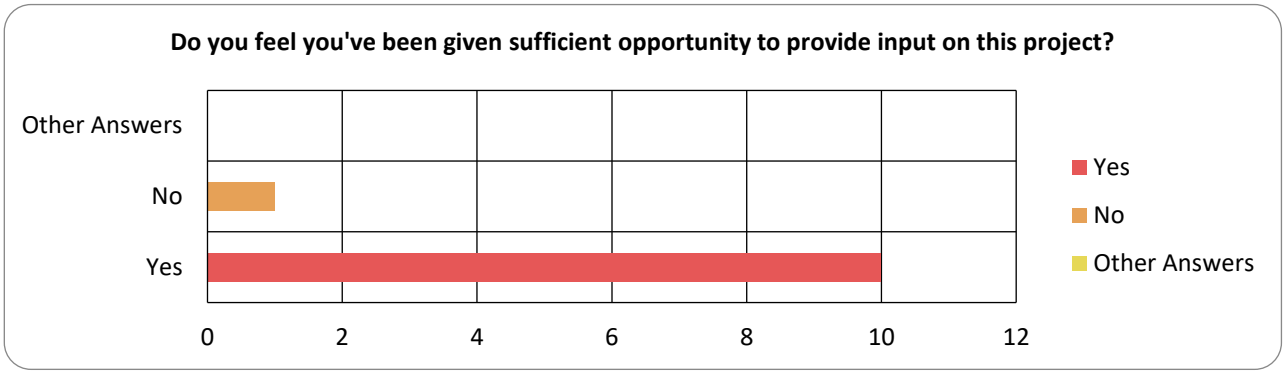
Phase 2 Van Buren Avenue Corridor Plan Survey

Q1 Do you feel you've been given sufficient opportunity to provide input on this project?

Choice	Responses	
Yes	10	90.91%
No	1	9.09%
Other Answers	0	0.00%
How many people answered survey	**11**	
Skipped	**0**	



Phase 2 Van Buren Avenue Corridor Plan Survey

Q2 Do you have any concerns that have not been addressed?

Response	
Many of the proposed changes will decrease the value of people's homes by decreasing lawn size, removing established Trees and Landscaping, and bringing the public easements closer to individuals houses. This is not only a concern aesthetically, but is also a huge safety concern by allowing the public closer access to resident's front doors. Adding bike lanes and full width sidewalks in some areas will drastically reduce the size of individual yards and require removing well-established Trees and Landscaping, as well as relocating cable lines, fiber optic lines, utility lines, and even mailboxes which would require approval by the Postal Service. Bike lanes are not necessary in this neighborhood as we have almost zero bike traffic. Many of these ideas are clearly not well thought out, and have not taken into consideration how they will affect the lives of the people who live here.	
1) I am still uncertain where my front property line is vs. the easement for utilities and, apparently, the new configuration of the sidewalk. How much of what I thought was "my" yard (recognizing that utility co.s could dig to access their underground lines) will now be taken up by the 6" wide sidewalks and the green area buffering the sidewalks from the street? 2) Who will maintain the new, wider sidewalks and the grass closest to the street? If both are the responsibility of the homeowner, has anyone considered a) the increased stress of snow removal on older homeowners, and b) the lack of such maintenance on similar type sidewalks along portions of Dell Range, leading to lots of weeds, unshoveled walks, etc.? 3) Where will crosswalks be at the "mini-roundabout" for the school children and other members of the public? 4) I do not see any advantage to the mini-roundabout, since the presenter said people would just be able to drive right over the raised cement that comprises the roundabout. Additionally, how will both snow removal trucks and general traffic be able to see where the roundabout is when there is snow on the street??	
NO	
NO	
Excellent idea for traffic light at Dell Range / Van Buren - ASAP	
The speed of vehicles must be slowed Thank you	
Mail box locations on Van Buren Ave	
Extreme hazard to retrieve our mail, given the intense speed of vehicles on Van Buren Ave.

Phase 2 Van Buren Avenue Corridor Plan Survey

Q4 Do you think the addition of bike lanes, full width sidewalks, and landscaping strips add value and safety to the corridor?

Choice	Responses	
Yes	8	72.73%
No	2	18.18%
Other Answers	1	9.09%
As described above, I have questions about the sidewalk configuration. I also wonder how necessary bike lanes are on both sides of the street--I see bikes daily, but they always use the sidewalk on the west side of Van Buren, never on the east.

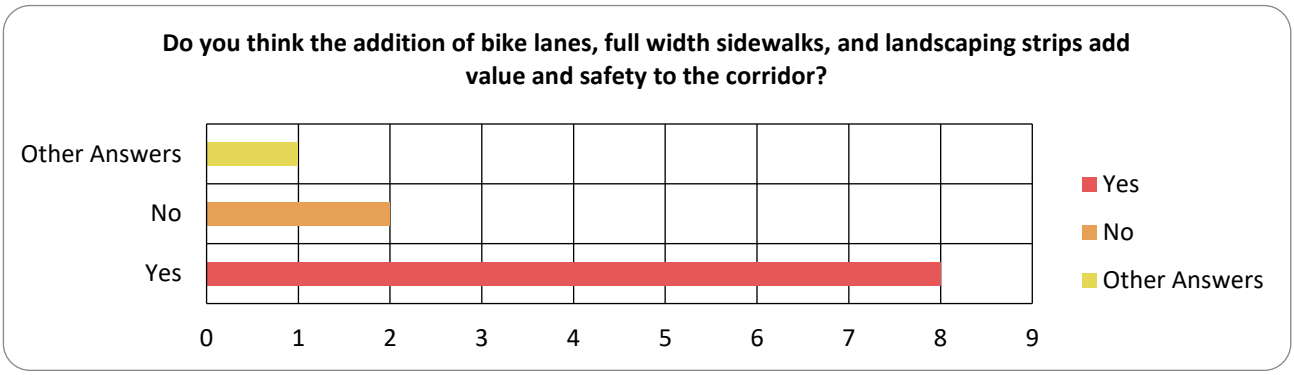
Skipped	**0**	



Phase 2 Van Buren Avenue Corridor Plan Survey

Q5 Do you feel that drainage has been adequately addressed between this project and the other proposed work along the corridor?

Choice	Responses	
Yes	4	44.44%
No	3	33.33%
Other Answers	2	22.22%
I really don't know		
I don't know! I was in the hospital during the first public meeting, when apparently at least some info. was presented about the drainage plan; at the meeting June 1st, no info. at all was presented to us. I have a call in to the City to try to get information, but have not heard anything back yet. I don't feel like there has been sufficient info. provided through any other public means that I have seen or heard--just that there is a project in the works, but no details about what to expect. Therefore, I can't determine if this topic has been been adequately addressed.

APPENDIX E – TRAFFIC DATA AND ANALYSIS

MH Corbin Traffic Analyzer Study
Computer Generated Summary Report
City: Cheyenne
Street: Van Buren Ave
Location: South of Dell Range Blvd

A study of vehicle traffic was conducted with the device having serial number 404055. The study was done in the Southbound lane at Van Buren Ave in Cheyenne, WY in Laramie county. The study began on 08/31/2022 at 12:00 AM and concluded on 09/01/2022 at 12:00 AM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 682 vehicles passed through the location with a peak volume of 29 on 08/31/2022 at [03:15 PM-03:30 PM] and a minimum volume of 0 on 08/31/2022 at [11:45 PM-12:00 AM]. The AADT count for this study was 682.

SPEED

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 25 - 30 MPH range or lower. The average speed for all classifed vehicles was 28 MPH with 9.73% vehicles exceeding the posted speed of 30 MPH. 0.60% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 25MPH and the 85th percentile was 33.90 MPH.

A study of vehicle traffic was conducted with the device having serial number 404091. The study was done in the Northbound lane at Van Buren Ave in Cheyenne, WY in Laramie county. The study began on 09/13/2022 at 12:00 AM and concluded on 09/14/2022 at 12:00 AM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 1,061 vehicles passed through the location with a peak volume of 41 on 09/13/2022 at [03:45 PM-04:00 PM] and a minimum volume of 0 on 09/13/2022 at [12:00 AM-12:15 AM]. The AADT count for this study was 1,061.

SPEED

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 30 - 35 MPH range or lower. The average speed for all classifed vehicles was 32 MPH with 24.73% vehicles exceeding the posted speed of 30 MPH. 2.85% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 30MPH and the 85th percentile was 38.67 MPH.

CHART 1

CLASSIFICATION

Chart 2 lists the values of the classification bins and the total traffic volume accumulated for each bin.

Most of the vehicles classified during the study were Vans & Pickups. The number of Passenger Vehicles in the study was 320 which represents 31 percent of the total classified vehicles. The number of Vans & Pickups in the study was 584 which represents 57 percent of the total classified vehicles. The number of Busses & Trucks in the study was 67 which represents 7 percent of the total classified vehicles. The number of Tractor Trailers in the study was 48 which represents 5 percent of the total classified vehicles.

CHART 2

HEADWAY

During the peak traffic period, on 09/13/2022 at [03:45 PM-04:00 PM] the average headway between vehicles was 21.429 seconds. During the slowest traffic period, on 09/13/2022 at [12:00 AM-12:15 AM] the average headway between vehicles was 900 seconds.

WEATHER

The roadway surface temperature over the period of the study varied between 54.00 and 115.00 degrees F.

MH Corbin Traffic Analyzer Study
Computer Generated Summary Report
City: Cheyenne
Street: Van Buren Ave
Location: North of Laramie St

A study of vehicle traffic was conducted with the device having serial number 404055. The study was done in the Southbound lane at Van Buren Ave in Cheyenne, WY in Laramie county. The study began on 09/15/2022 at 12:00 AM and concluded on 09/16/2022 at 12:00 AM, lasting a total of 24.00 hours. Traffic statistics were recorded in 15 minute time periods. The total recorded volume showed 1,206 vehicles passed through the location with a peak volume of 47 on 09/15/2022 at [08:00 AM-08:15 AM] and a minimum volume of 0 on 09/15/2022 at [11:30 PM-11:45 PM]. The AADT count for this study was 1,206.

SPEED

Chart 1 lists the values of the speed bins and the total traffic volume for each bin. At least half the vehicles were traveling in the 25 - 30 MPH range or lower. The average speed for all classifed vehicles was 30 MPH with 15.72% vehicles exceeding the posted speed of 30 MPH. 0.75% percent of the total vehicles were traveling in excess of 55 MPH. The mode speed for this traffic study was 25MPH and the 85th percentile was 35.27 MPH.

Hi Ken / UCS:

- We'd like to coordinate our surveyors' work with your locates along Van Buren Avenue.
- Do you know when UCS will be out there?
- Ed

Subject: RE: Van Buren Avenue Project Utility Locates

Hi Ken:

- We received the go-ahead on this project and would like to coordinate with our surveyors schedule so they can record your locates.
- What is UCS' availability over the next few weeks?
- Ed

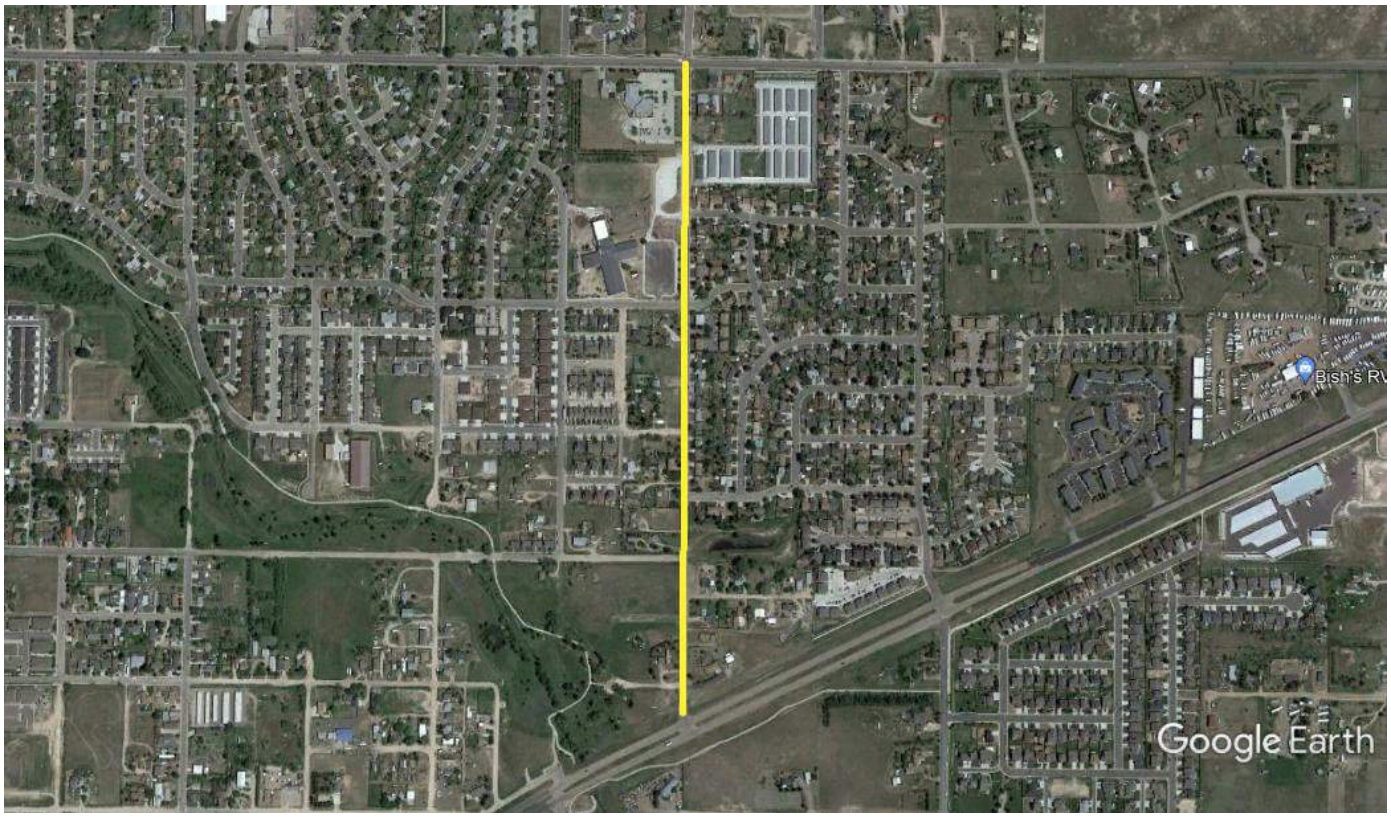
Hi Ken:

- I hope this finds all the folks at UCS happy and healthy.
- I need your estimate to locate buried dry utilities within 100' of centerline for 0.65 miles of Van Buren Avenue, between Dell Range Boulevard and US-30 (Lincolnway). Here's a map:



Thanks,

- Ed

responsibility to determine if differences are present. The recipient agrees to indemnify and hold harmless Western Research and Development and its subconsultants and each of their partners, officers, shareholders, directors and employees from all claims, judgments, suits, liabilities, damages, costs or expenses (including reasonable defense and attorneys fees) arising from either: 1) Recipient's failure to comply with any of the conditions stated herein; 2) a defect, error or omission in the electronic file or the information contained therein, which defect, error or omission was not contained in the paper hard-copied documents, or where use of such paper hard-copied document would have prevented the claim, judgment, suit, liability, damage, cost or expense; or 3) recipient's transfer of electronic files to other users without including this agreement.

Remove Existing Asphalt	1800	SY	22.00	$	39,600
Remove Existing Concrete Valley Pans	160	SY	30.00	$	4,800
Remove Signs	3	EA	25.00	$	75
Relocated Type A Inlets	2	EA	3,000.00	$	6,000
Curb & Gutter (24")	820	LF	90.00	$	73,800
Concrete Flatwork	535	SY	125.00	$	66,875
Asphalt (Hot Plant Mix)	325	Ton	70.00	$	22,750
Striping	1340	LF	0.25	$	335
Painted Markings	92	SF	2.00	$	184
Thermoplastic Crosswalk & Stop Bar Markings	235	SF	38.00	$	8,930
Detectable Warning Plates	16	EA	250.00	$	4,000
Luminaires	12	EA	1,200.00	$	14,400
Signs	10	EA	400.00	$	4,000
			SUBTOTAL=	$	287,949

TOTAL ESTIMATED PROJECT COST=	$	490,998
2035 Estimate, 3% Inflation	$	700,045
2045 Estimate, 3% Inflation	$	940,803

Van Buren Avenue
Planning Cost Estimate

DESIGN FROM 35% TO 100%				
Item	**Quantity**	**Unit**	**Unit Price**	**Total Cost**
Corridor Survey for Design	1	LS	22,714.59	$ 22,715
Engineering Design to 100% Contract Documents	1	LS	227,145.93	$ 227,146
Permitting	1	LS	22,714.59	$ 22,715
Bid Assistance and Construction Inspection	1	LS	45,429.19	$ 45,429
			SUBTOTAL=	$ 318,004

GENERAL CONTRACT ITEMS				
Item	**Quantity**	**Unit**	**Unit Price**	**Total Cost**
Mobilization, Demobilization and General Contract Requirements	1	LS	165,710.94	$ 165,711
Traffic Control	1	LS	8,285.55	$ 8,286
Stormwater Prevention Plan and Implementation	1	LS	24,856.64	$ 24,857
Contingency	1	LS	165,710.94	$ 165,711
			SUBTOTAL=	$ 364,564

DEMOLITION				
Item	**Quantity**	**Unit**	**Unit Price**	**Total Cost**
Remove Curb & Gutter	2541	LF	16.00	$ 40,648
Remove Existing Sidewalk	1129	SY	20.00	$ 22,587
Remove Existing Asphalt	12304	SY	22.00	$ 270,688
Remove Existing Concrete Paving	768	SY	30.00	$ 23,027
Remove/Relocate Existing Signs & Mailboxes	1	LS	2,000.00	$ 2,000
			SUBTOTAL=	$ 358,950

ROAD IMPROVEMENTS				
Item	**Quantity**	**Unit**	**Unit Price**	**Total Cost**
ROW Acquisition	1	LS	175,765.43	$ 175,765
Curb & Gutter (24")	6554	LF	90.00	$ 589,860
Concrete Flatwork	5202	SY	125.00	$ 650,283
Asphalt (Hot Plant Mix)	3173	Ton	70.00	$ 222,092
Striping	13020	LF	0.25	$ 3,255
Relocate Feedback Speed Signs	2	EA	150.00	$ 300
Thermoplastic Crosswalk & Stop Bar Markings	377.5	SF	38.00	$ 14,345
Painted Markings	154.5	SF	2.00	$ 309
Relocate Crosswalk Signs	6	EA	150.00	$ 900
Detectable Warning Plates	21	EA	250.00	$ 5,250
			SUBTOTAL=	$ 1,657,109

UTILITY IMPROVEMENTS				
Item	**Quantity**	**Unit**	**Unit Price**	**Total Cost**
Relocate Type A Inlets	4	EA	3,000.00	$ 12,000
Adjust Existing Manholes (Sanitary & Storm)	22	EA	2,600.00	$ 57,200
Relocate Power Poles	7	EA	10,000.00	$ 70,000
New Power Lines	1600	LF	10.00	$ 16,000
Communication Line Adjustments	1	LS	12,500.00	$ 12,500
Fire Hydrants	3	EA	5,000.00	$ 15,000
New 8" Waterline	700	LF	100.00	$ 70,000
New 6" Waterline	30	LF	90.00	$ 2,700
Luminaire	3	Ea	1,050.00	$ 3,150
			SUBTOTAL=	$ 255,400

TOTAL ESTIMATED PROJECT COST=	$	2,954,028
2035 Estimate, 3% Inflation	$	4,211,737
2045 Estimate, 3% Inflation	$	5,660,222
